\{Crofs, Chapel. Carlifle Bay.

Old Harbour, Paffage Fort. Market.

I fall begin with an account of St. Catharine; which, having been the firt-inhabited by the Englifh, is entitled to precedence, more efpeciaily as it contains the antient metropolis of St. Jago de la Vega, or, as it is commonly called, Spanifh Town, the original name being chiefly unfed in acts of affembly, proclamations, and other public documents. It is fituated it -about $18^{\circ} I^{\prime}$ North laVol. II.

titude,

## J A M A I C A.

titude, and in $76^{\circ} 45^{\prime}$ longitude, Weft from London. It ftands, about ten miles Weftward of Port Royal ; eleven from Kingfton, by the way of Paffage Fort; and about eighteen by the road of Halfway-Tree, in St. Andrew's. It is faid by fome authors to have been founded by Chritopher Columbus, whofe family took the ducal title of la Vega from it. Other accounts, with more appearance of probability, affert, that it was built by Diego, the fon of Chriftopher, about the year 1520 . The accounts given us of its magnitude and opulence are ftrongly fufpected of exaggeration. Some writers inform us, that it contained above two thoufand houfes, fixteen churches and chapels, and one abbey, before the invafion under Penn and Venables; and that the Englifh foldiers exercifed their prowefs againft thefe edifices with fo furious a zeal, as to leave only two churches and about five hundred houfes undemolifhed [a]. Other authors, with more appearance of cre. dibility, relate, that it contained one thoufand feven hundred houfes, two churches, two chapels, and one abbey: but even this account allows pretty largely for the Spanifh or white inhabitants; who, according to the moft certain information of the Englifh officers who went over with the army, and afterwards fettled here, did not exceed fifteen hundred: fo that, if thefe writers are to be believed, the houfes out-numbered the inhabitants. The Englifh army eftablifhed their head-quarters here ; and, as they had occafion for moft of the houfes that were habitable, we muft fuppofe that they only pulled down thofe of an inferior clafs, together with the religious edifices, which, as far as their ruins and tradition can afford evidence, confifted of an abbey and two churches, the one called the Red, and the other the White Crofs. There is reafon to believe, that, after the feat of government was transferred to Port Royal, the town of St. Jago became thinned of inhabitants, who
[a] This is Hickeringell's account. He was the earlieft writer on the affairs of this ifland, and himfelf in the army at the time of the conquett under Venables; but it is polfible, that he might have eftimated the number of houfes by conjecture only, or been mifinformed. According to the beft teftimonies, the whole Englifh army, at the time of their entering the town, did not confirt of more than about nine thoufand, including a regiment of marines. Allowing therefore ten to each houfe, when they were in quarters (which, confidering the fmallnefs of thefe alifices, may be reckoned full fufficient), the number they fpared from deftruction may be fuppofed about nine hu" dred , for the accommodation of the officers and men.

## BOOK III. CHAP. VII.

gradually left it, either to refide at the new metropolis, or to fpread themfelves in the country: in confequence of which, a great many of the Spanifh houfes were fuffered to decay; and others were pulled down, to enlarge areas; while fome were converted into warehoufes and ftables; fo that at prefent it does not contain more than between four and five hundred inhabited by white perfons; but, when thofe inhabited by free Negroes, Mulattoes, and flaves, are taken into account, the whole number may be eftimated at about twelve hundred. The prefent church was erected where the Spanifh Red Crofs Church formerly ftood, at the Eaftern end of the town; the White Crofs ftood at the Northern extremity, at a fmall diftance from the river, on a very agreeable fpot, which is now occupied with a handfome modern-built houfe. On digging the foundation for this houfe, feveral large pieces of wrought ftone were turned up. They appeared to be of the white lime-ftone, or fpecies of fhellmarble, fo common in the neighbouring hills, and to have been the lintels of doors or windows belonging to the old church [b]. The abbey was fituated on the South fide of the parade, where the guard-room and chapel now ftand, and extended back to the governor's houfe. The bafes of two columns, which once fupported a large arch-way leading into the abbey, were vifible but a few years ago: they ftood near the South end of the public offices, were about eight feet fquare, compofed of brick-work, cemented with fo fine a mortar, that in removing them the bricks were all fhivered in pieces. I have feen in this town a great many large ftone-mouldings, for the bafes and other parts of columns; which, as well as the fculptures dug out of the ruins of Sevilla Nueva, in St. Anue's, appeared to have been executed by no mean artifts. The Spanifh ecclefiaftics (however blameable in other refpects) muft be allowed fome merit in having cultivated the elegances of architecture in thefe remote parts of the world. Some of their public

[^0]
## J A M A I C A.

ffruetures at St. Domingo, the Havannah, La Vera Cruz, Carthagena, Panama, \&rc. would make a noble figure even in European cities. The fanatic rage, or heedlefs indifference, of the Englifh who firft fettled in Jamaica, occafioned the ruin of the Spanifh buildings dedicated to religious ufes here; fo that pofferity can only form an opinion of their magnificence from fuch fragments as here and there are to be found in a neglected ftate, as being of too large dimenfions to be employed in any building of modern fyle. In the fituation of the town, the Spanifh founder thewed a good deal of judgement, but not much regularity in the difpofition of the freets; yet it is better laid out than moft of thofe in England. That a Weft-India town fhould be irregularly planned is, indeed, almoft inexcufable, not only on account of health, which ought to be principally regarded, but becaufe it is formed as it were at once. Thofe in England had not the fame advantage; they grew for the moft part from two or three folitary cottages, planted by the fide of fome road, or at the interfection of crofs-roads, which having been traverfed at firft without any exactnefs, the fame meandring lines continued after the fides of thefe highways were built upon and converted into ftreets; which name is derived with more propriety from the word Arait, or narrow, than from fraight or not crooked, when it is applied to the towns of England. St. Jago ftands on a rocky flope, gradually afcending from the river Cobre to an extenfive plain, called the Town Savannah; fo that the rain-water, which fometimes falls heavily, efpecially in the feafons, paffies away with a free current into the river; by which means the town is guarded from many inconveniencies. From Port Royal harbour it is difant about fix miles N. W.; and, the land having an eafy fall from it to the water-fide, without any intervening morafs, it receives the fea-breeze with little diminution of force or purity. Towards the North it is about two miles from the hills, which fink fo much in that direction, in compliance with the courfe of the river, as to give a fine opening from the extenfive vale of Sixteen-mile-walk, and admit the land-wind. The town is about a mile in length, and fomewhat more than a quarter in breadth, lying Lo.gituuninany North and South; and contains about twenty flreets and lanes, a fquare, a church, a chapel, and other public buildings,

## BOOK II. CHAP. VII.

ings, which I fhall particularly fpeak of. The church is fituated in the South-Eaft quarter of the town, near the entrance coming from Paffage Fort. It is an elegant building of brick, in form of a crofs, confifting of four ailes, of which the main aile meafures one hundred and twenty-nine feet in length, and twenty-nine in breadth. As it is without a tower, the congregation is fummoned by a fmall bell hung in a wooden frame, which is erected in the church-yard; the pulpit, pews, and wainfcotting, are of cedar and mahogany; and the ailes for the mort part paved with marble. The altar-piece is handfome, and adorned with carved work; and the decalogue in gilt letters: fronting it, at the Wert end of the main aile, is a gallery fupported on columns, and furnifhed with an exceeding fine organ, which coft 44ol. Aterling, and was fet up in the year 1755. The organift has a falary of 120 l. per annum currency, paid by the parifhioners, and receives other emoluments, his affiftance being generally required at the funeral obfequies even of the free Negroes and Mulattoes buried in this parifh. The cieling is neatly coved, and graced with two magnificent chandeliers of gilt brafs; and the walls are hung with feveral monuments of marble, plain, but well-executed. The governor's pew is diftinguifhed from the reft by being raifed higher, and crowned with a canopy. The two chandeliers were the gift of private perfons; and part of the communion plate, I have been told, was plundered from a Roman catholic church fome years ago, at the attack of Port Louis, in Hifpaniola: it has more of grandeur than elegance in its fanhion. The building was erected in two years, at the parochial expence, on the foundation of the former one, which was irreparably damaged by the hurricane of Auguft, 1712. About the year 1762 it received a thorough repair, and at prefent yields to none in the ifland for a becoming neatnefs. The provifion made for the rector conflits of a very convenient dwelling-houre in the town; fixty acres of rich pafture-land, within a fmall diftance of it, the donation of Mr. Edward Morgan in ió/4; and upwards of five hundred acres in the neighbourhood, patented in the lame year " for che ufe of the parifh of St. "Catharine, towards the maintenance of the minitur:" but this latter parcel has not as yet been appropriated to the original delign ;
the different incumbents having been either unwilling or unable, by reafon of the expence, to difurb the poffeffion of thofe perfons who have occupied it; though it will fcarcely admit of a doubt, but that it was meant as a glebe to be annexed to the rectory in perpetuum, there being no other affigned to the purpofe. The prefent rector is Doctor Lindfay; the ftipend is $300 \%$ currency per annum: but the whole profit of the living has been eftimated double that fum at leaft; for, as the duty is great, the occafional fees are confiderable.

The chapel ftands on the South fide of the fquare, near the governor's houfe. It is built much in the ftyle of the common-halls belonging to the inns of court in London: the walls are crowned with battlements; and on the centre of the roof is a cupola and clock. It was founded juft after the earthquake of 1692 , in a religious panic, during the adminiftration of Sir William Beefton. How long it remained confecrated to pious ufes is uncertain; but the founder, as if confcious that a wicked race of people would fucceed, who, forgetful of that calamity, might incline to profane it, caufed an infcription, cut in marble, to be fixed up on one end of the building; which denounces a moft terrible imprecation againft any perfon or perfons who fhould dare to put it to any other ufe than that for which it was originally intended. Notwithftanding this, it was afterwards converted into an arfenal of fmall-arms, chiefly for the free Negroes and Mulattoes. In the year i760, it contained two thoufand fix hundred and feventy-two fand of firelocks, and three hundred and three brace of piftols: it generally has a ftand of about three thoufand; for keeping of which in good order, the affembly pay an annual falary to an armourer. Adjoining to this ftructure is the guard-houfe; where a party of regulars are every day on duty to attend the governor. The governor's, or, as it is more ufually called, the king's houfe occupies the whole Weft fide of the fquare. The plan of this pile was defigned and approved of under the adminiftration of lieutenant-governor Moore; but the building was not completed till the arrival of his excellency governor Lyttelton in $1 ; 62$. It was erected, at the fole charge of the ifland, under the infpection of Mr. Crafkell, then engineer of Jamaica, and defigned for the ufual place of refidence

## BOOK III. CHAP. VII.

of the commander in chief. The expence of building and furnifhing it amounted to near $30,000 \%$ currency; and it is now thought to be the nobleft and beit edifice of the kind, either in North-America, or any of the Britifh colonies in the Weft-Indies. The firft floor is railed about four feet above the ground ; the fecond is an Attic ftory; the length of the façade is about two hundred feet; and of the whole range, including the yard and offices, about two hundred and fixty. The cornices, key-ftones, pediments, copings, and quoins, are of a beautiful free-ftone, dug out of the Hope river courfe, in St. Andrew's parifh. The entrance is by a lofty portico, projecting from the middle of the front about filteen feet, fupported by twelve columns of Portland-ftone, of the Ionic order. The pediment which rifes above the Attic flory is fuperb, and very properly ornamented with the imperial arms of GreatBritain, in carved work well-executed. The pavement of the portico is of white marble, the afcent to which is by a flight of fteps of the fame material. This portico gives an air of grandeur to the whole building, and very happily breaks the length of the front. Two principal entrances lead through it into the body of the houre ; the one opens into a lobby, or ante-chamber; the other, into the great faloon, or hall of audience, which is well-proportioned, the dimenfions being about feventy-three by thirty feet, and the height about thirty-two: from the cieling, which is coved, hang two brafs gilt luftres. A fcreen, of feven large Doric pillars, divides the faloon from an upper and lower gallery of communication, which range the whole length on the Weft fide; and the upper one is fecured with an elegant entrelas of figured iron work. The Eaft or oppofite fide of the faloon is finifhed with Doric pilafters; upon each of which are brafs girandoles double-gilt ; and between each pilafter, under the windows of the Attic ftory, are placed, on gilt brackets, the buft of feveral ancient and modern philofophers and poets, large as life; which being in bronze, the darknefs of their complexion naturally fuggefts the idea of fo many Negiờe Caboceros, exalted to this honourable diftinction for fome peculiar fervices rendered to the country. At the North end, over a door which opens into the lobby, is a fmall moveaivin orcheftra, made to hold a band of mufic on feftive occafions. The furniture
below confifts of a great number of mahogany chairs and fettees, fufficient to accommodate a large company; this room being chiefly ufed for public audiences, entertainments, balls, and the hearings of chancery and ordinary. At the South end are three foldingdoors, opening into a fpacious apartment, in which, by the governor's permiffion, the council ufually meet; whence it has received the name of the council-chamber. At this end it was defigned to place full-length portraits of their prefent majefties, and likewife of the prince of Wales and his late majefty, between the pilafters; but I am informed they have not yet been obtained. Above the coun-cil-chamber is a banqueting-room, or drawing-room, of the fame fize, hung with paper, and neatly furnifhed. This room communicates with the upper gallery and a back ftair-cafe, and enjoys a view of the faloon through fome windows ranging with thofe of the Attic ftory: it is feldom ufed, except on public days, and is perfeetly well-calculated for the purpofe. Thefe different apartments take up about one-half of the whole building. The room over the lobby, being fomewhat darkened by the pediment of the portico, was converted by governor Lyttelton into a chapel, for private devotions. It is neatly fitted up, and with great propriety adapted to this ufe. The Northern divifion of the houfe confifts of three large rooms below, communicating with each other, and with a long gallery; all of which are handfomely furnifhed and well-lighted: this gallery has commonly been ufed either for public fuppers, when balls were given in the hall, or as a fheltered and retired walk in wet weather. 'The upper flory is difpofed in a fuite of chambers, divided by a long narrow gallery from a range of fmaller apartments or clofets, intended for lodging the governor and part of his houfhold. The two Northernmoft rooms above and below are provided with a chimuey, and all the neceffary apparatus for a good fire; which in the rainy feafons is healthy and not difagreeable. In this new building are three fair-cafes, all of which are private; a circumftance, perhaps, overlooked when the plan was drawn, and not more attended to when it came to be executed: yet there is fufficient face in the lobby for cariging up a very magnificent ientral one, anfwerable to the nther parts of fo capital a ftructure; and this no doubt will, fome time or other, be

## B O OK II. C HAP. VII.

added, as a neceffary improvement to compleat it. Behind is a fimall fquare garden, laid out in dry walks, and planted with Seville orange, genip, and other fruit-trees, with fome flowering fhrubs intermixed; but it is not fo well cultivated as to merit a further defcription. Adjoining to it are two little fquare courts, furrounded with the old buildings, which comprehend feveral lodging-rooms, the private fecretary's office, a large fervants hall, kitchen, and other convenient offices. South of the whole is a fpacious area, environed with the ftables, coach-houfe, granary, \&cc. and this area communicates with the parade, or great fquare, by a large gateway. All the apartments and offices belonging to the houfe are extremely commodious and airy. In fhort, I believe there is no one of all the colonies where the commander in chief is lodged in a manner more fuitable to his convenience, and the dignity of his rank. On the oppofite fide of the parade, directly fronting the governor's houfe, is a coloffal building, erected likewife by the inhabitants of the ifland at a very great expence: it was begun about feventeen or eighteen years ago; but is not yet completed, nor probably ever will be. It puts us in mind of the gentleman's beard, defcribed by Martial, that grew under the operation of a bungling barber; the half firft-fhaved called again for the razor before the other half was finifhed. This huge pile of brick and mortar is rudely raifed into two ftories. Below is an arcade of large extent, of fixteen circular arches, and one elliptical in the centre, of ruftic work, upon the top of which is a lofty pediment raifed upon four Doric columns. The body of the building is retired, to afford an open gallery, fecured by a balluftrade, and floored with pitch pineboards, very badly adapted to the climate, where the rain and fun are fo deftructive to wood-work thus expofed. The upper fory is afcended by a large ftair-cafe, which divides from the firt landing into two branches, both terminating at the two ends of a fpacious lobby; the South end opens into the affembly-chamber and feeaker's room; the other end, into the court-houfe and jury-room; and the front, into the gallery. Below are ranged the feveral offices of the ifland fecretary, provoft-marhal, regifter in chancery, and clerks of the crown and court; for the ufe of which, as they coft fomewhat annually in repairs, thefe officers pay to the public a certain moVol. II.
derate rent, amounting to much lefs than they would pay, if they were obliged to hire houfes, which formerly was the cuftom. The offices being thus fo compactly difpofed, and fo contiguous to the courts of juftice, a very fignal convenience refults to all perfons having bufinefs to tranfact in them. The affembly-chamber, or commons-houfe, is about eighty feet in length by about forty. At one end of it a fort of amphitheatre is raifed, with mahogany, fome little elevation above the floor, and lined with feats for the members : the fpeaker's chair is exalted fill higher. On the floor is a long table, at which the clerk fits; and thereon are regularly heaped, during the feffion, feveral manufcript folios of laws, minutes, and votes, the Englifh ftatutes at large, votes of the Britifh houfe of commons, with pens, ink, and paper, for the inftruction and accommodation of the fenators. The fpeaker's room is furnifhed with proper conveniences for the private committec3 appointed to meet in it. The cieling of the commons-houfe is lofty and vaulted, except the part of it immediately over the feats; this is boarded and flat, in order to render the debates more diftinct and audible. The court-houfe is well-defigued, and extremely commodious for the judges, jury, barrifters, and other parties that attend it. The doors of the two houfes are directly fronting each other; fo that, when the fupreme court is held during the feffion of the afiembly, the fpeaker and chief-jultice are feated vis à vis. Thus the judges feem tacitly admonifhed to a juft difpenfation of the law and their duty ; their conduct being amenable to the inquifition and impeachment of the commons in affembly. The two bodies thus circumftanced, the one met for framing, amending, or repealing, the other for enforcing, expounding, or deciding upon, the laws, afford to the frectators a friking picture of the legiflative and executive departments, as moulded by our happy conffitution (though here exhibited onfy in miniature); each harmonizing the other; ever acting and re-ating; various, yet concurrent. This building, which lines one entire fide of the parade or fquare, had originally a cupola on the middle of the roof, which gave an appearance of lightnefs and variety to the view; but, having afterwards been found too cumberfome, and productive of fome inconveniences, it was taken down; by which means, the front feems

## BOOK II. CHAP. VII.

too much extended, and has too heavy an afpect to pleafe the eye. The brick columns of the arcade are much too maffive and clumfy, appearing as if they were intended to fuftain fome enormous weight, but hitherto fupporting only a flight floor, which is fo leaky as not to anfwer the purpofe of fereening the offices and parfengers underneath from a tranfient fhower. The pediment in the centre, and the projection of the fpeaker's and jury rooms at each end, are fome little relief. But, taking the whole fructure to. gether, and reflecting on the vaft fums of money that have been thrownaway upon it, we may juftly queftion, whether confummate difhonefty or ignorance was the chief architect [c].

#### Abstract

[c] From the grand or fupreme law-court which is held here (if the chofe in action be for a fum above $300 \%$. 1terling), an appeal lies to the court of errors; or, if fentence of death be paffed for felony, the appeal is to the governor alone, who for all fuck crimes, except murder and treafon, can ratify or annul the judgement of the court as he pleafes; but, in the two laft-mentioned cafes, may either refpite the offender till the royal pleafure thereupon be known, or order immediate execution. The grand court is held four times a year, each feffion continuing three weeks. Tila the year 1758, all caufes of more than forty fhillings throughout the ifland were tried in this town; when an act was paffed for dividing the ifland into three circuits, in each of which affizes are held the like number of times in the year. From the courts that are held in Surry and Cornwall, a venire lies in fome cafes to that in Spanifh Town. All informations upon actions for breach of the laws of trade and navigation, duties, cuftoms, imports and exports, quit-rents, and efcheats, are triable in the fupreme court only. And, in all actions for the property in flaves or their freedom, or in ejectment, dower, partition, titles affecting lands or tenements arifing in the counties of Cornwall or Surry, the judges of the fupreme court may direct the iffive to be tried at St. Jago de la Vega by a Middlefex jury. From the grand court the appeal goes on, as before related, to the court of errors; and, after judgement given in the court of errors, the party caft may travel with his caufe before the king in council at home : he muft, indeed, after the decifion in the court of errors, if it affirms the fentence of the grand court, pay into the complainant's hands the amount of the aftion, he giving fecurity to the defendant for re-payment of it in cafe the feno tence fhould be reverfed at home.

It is true, that by thefe appeals it has been fuppofed that juitice is more likely to be adminiftered; but they are neverthelefs highly prejudicial with regard to the immoderate delay which neceffarily enfues: for, let the evidence be ever fo clear and conclufive, an action of debt upon a fimple bond may be brought by the defendant (after judgement has been obtained upon it in the grand court) before the governor and council in the court of errors; where it may polfibly flumber a whole year, or mote, before it can be heard and decided, and before the plaintiff can receive any juftice or redrefs; for, how defirous foever the governor himfelf may be to haften judgement, it is not always in his power to do it. He may advertife the holding fuch a court from time to time, but to very little purpofe, unlefs a quorum of his council are pleafed alfo to attend and affilt him ; who are fometimes interefted in the matter in difpute, either as principals or collaterals, and confequently fo far difqualified to prefide upon it as judges. I have before obferved on the inconveniences which attend this appeal-court; and fhall therefore only add, that it has long been the fincere wifh of all the inhabitants (except the partizans of knavery and litiga-

## 12

## J A M A I C A.

## On the North fide of the parade is a fmall building, called the old court-houfe, where the fupreme court was formerly held, and

tion) to fee it entirely abolifhed. The judges of the grand court are vefted with the privilege of prefiding either in the Surry or Cornwall courts, as well as that in Middlefex; whereas none of the puifne judges, who are fpecially appointed for either of the former, are pernitted to fit in the latter. The number of actions, which in this fimall community are every year brought before the grand court, will appear almolt incredible : yet the books of entry in the clerk of the court's office, which are an undoubted authority in this refpect, fhew, that there are near four thoufand new ones inftituted per ainum upon an average. Hence a conception may be formed of the vaft quantity of bufinefs tranfaced in this court, and of the cmoluments derived from it to the members of the law. Among all the caufes which lead to the multiplication of this evil, none are more conducive than the following: Ift, the fraudulent conduct of executors; 2 dly, the transfer of property from hand to hand by exchange of papers ; 3 dly, the fallacious fixtures of plats by roguith or ignorant land-furveyors; $4^{\text {thly }}$ ly, the great delay of juftice by a multiplicity of appealcourts; 5 thly, expenfive and diffipated habits of living: of thefe, the laft-mentioned may be reckoned the principal. Property here is oftener rather nominal than real. A man, in poffeffion of an eftate yielding 2000 \% per annum, fpends as much, and lives as though he actually had a right to a clear income of that amount, notwithftanding it may be greatly encumbered. The confequence of this muft be, that, if he fpends the whole income at the very time when he owes at leaft one half of the value of his property, in a very few years he is obliged to part with both the eftate and income too; efpecially if any of the ufual cafualties, fuch as the death of Negroes and. cattle, drowth, oi floods, fhould happen to impair it. A wife planter, therefore, fhould never fpend above one third of his income, nor value his property at a higher proportion. But how precarious foever fortunes are in this part of the world, and liable, from various and innumerable caufes, to fudden changes, and however frequent fuch initances; yet few here take warning by the fate of others, or feem awake to their own danyer, till unhappily they experience the fame themo felves: fo that we may apply what Juvenal faid of Rome in his dars:

> Hic ultra vires babitü̆s nitor; bic aliguidip plus,
> 2uant fatis eff; inter dum alienâ fumitur alicâ.
> Commune id vitium of: bic vivimpus ambitiofa
> Poupertate. Sat. iii. v. 179, et Jequento.
> "-Here attir'd beyond our purfe we go,
> "For ufelefs ornament and flaunting thew :
> "We take on trult, in filken robes to thine,
> "Though poor, and yet ambitious to be fine."
> Dryd.

And this is literally true of us; for we are fo ambitious to live up to, or rather beyond, the nominal income of our eftates, that fometimes a perfon, whofe produce amounts in grofs to at leaft fix or feven thoufand pounds a year, is greatly diffrefied to pay his taxes, or even to raife the fum. of fifty pounds.

In hort, fo numerous are the law-fuits in the ifland from different caufes, and the fees paid to conncil fo large, that the gentiemen of the bar make feveral thoufand pounds per annum by their practice ; and, in regard to attomies, there are not fo few as one hundred; fome of whom, in a few years, acquire very confiderable fortunes. The evil practices of fome among them called for a regulation by law. Accordingly, an act of affembly, paffed in $176_{3}$, ordains, that none fhall be admitted to practife as folicitor or proctor in any court of law or equity in this ifland, without producing his adnuifion as fuch in Weltminfter-hall ; or court of chancery, king's-bench, commonpleas, or exchequer in Ireland; or unlefs he fhall have heen an articled clerk five years at leaft to a fworn-attorney or folicitor in Jamaica, and certified upon examination before two barrifters to

## BOOK II. CHAP. VII.

the governors kept their chancery-fittings; but, fince the removal of thefe courts into more convenient places, it is of no further ufe than for every commander in chief, on his firft arrival in the town ${ }^{*}$ to go into and take the ufual oaths; and at other times for holding elections of the parochial reprefentatives or officers; and, during martial law, as a guard-room for the militia. Adjoining to this ftructure is a range of building, which fills up this fide of the fquare, and comprehends a tavern, a lodging-houfe, and a barber's fhop; all of which are well fituated for good bufinefs in their way. Thefe houfes make an appearance that is rather difgraceful to the other environs of the fquare. The tavern is an old Spanifh building, which, tradition fays, was antiently a fable for the mules and horfes belonging to the Spaniih governor. The fquare has within it an octagonal inclofure, furrounded with a parapet-wall and rails, fecured at proper diftances by brick quadrangular columns, crowned with free-ftone; this was intended as an ornament, but it unfortunately has too much the refemblance of a cemetery: on two of the fides are double gates for the convenience of paffage from the publick offices to the governor's houfe. The original houfe of refidence for our governors confifted partly of the old Spanifh edifice, and partly of irregular additions made from time to time by Sir William Beefton and other Englifh commanders in chief. The Spanifh hall of audience was compleatly left till the year 176 r , when it was entirely pulled down to make room for the prefent building: nothing of art or elegance graced the infide of this hall: it was lined throughout with boards, or rather planks, unequally hewn with an adze; none of them appearing to have undergone the embellifhment of the plane; thefe were rudely nailed

[^1]
## J A M A I C A.

to upright pofts, which fupported the roof. The pofts were for the molt part crooked, not even fquared, and many of them had fome remnant of their bark; but they retained for the moft part their primitive folidity. The whole of the wood-work, indeed, fiemed to have paffed through no other hands than thofe of a clumfy flip-carpenter. The Spanifh tafte for the elegancies of architequre feems to have been reftriced to their religious ffructares. They are, however, to be commended for providing all their American towns with a fquare. The fquare in this town is not only a decoration, but the means of rendering the governor's houre, and the courts of juftice, more airy, pleafant, and healthful. In the Weft-quarter of the town fand the gaol for the county of Middlefex, a free-fchool, a poor-houfe, and the fhambles. The gaol is a fquare of eighty -five feet, and contains an open area within of about fifty-two: it is under the direction and management of the provoft-marfhal, or his deputy, who fometimes is not fo careful as he ought to be in ordering the apartments to be kept clean and wholefome: on the contrary, the room appointed for the reception of felons, which runsalong one fide of the court, is fo loaded with filth in general, as to be perfectly peftilential, not only to the miferable wretches who are there confined, but to the poor debtors, who now and then are indulged with liberty of accefs into the court by way of enjoying a fhort walk in the open air : add to this, that on the outfide of the wall there is fuffered a conftant accumulation of putrid mud and water, fufficient to poifon all the neighbouring atmofphere. In this delighteful place of cuftody debtors and malefactors of all forts, all fexes, and complexions, are promifcuoully crowded; a circumftance highly difgraceful to the publick humanity, more efpecially in a country where it is thought politically expedient to maintain a diftinction between Whites and Negroes. It is therefore not a little aftonifhing, that the debtor and the criminal fhould be huddled together; and that White perfons, who have committed no other offence than that of infolvency, fhould be affociated with the moft beftial and profigate wretches of the Negroe race, as if it was intended to fhew that incarceration, like death, is a leveler of all diftinctions. The number of perfons generally in confinement confifts of about twelve

## BOOK II. CHAP. VII.

twelve Whites and one hundred Negroes. Upon enquiry in ${ }^{1} \boldsymbol{j} 61$, it was found that the whole allowance, given to the debtors for their fuftenance, was one pickled-herring and five plantains each per diem (value feven-pence halfpenny), or two cakes of caffadabread in lieu of plantains: this was barely enough to keep life and foul together. From this fpecimen, fome judgement may bo formed of the hardfhips which a malicious creditor may in this country inflict upon his debtor; and it is therefore not in the leaft furprizing, that, to avoid fuch company, fuch fare, and abominable lodging, a debtor hould run all hazards, and defend himfelf by force and arms, rather than enter into this hole of Calcutta. The laws, however, are rather more favourable here than in England; for a debtor, delivering an account upon oath of all his effects, and having nothing to maintain him, may be let to hire in open court; which is now a mere form, and a mode of his deliverance; and any creditor, diffenting and infifting on his continuance in gaol, muft pay the debtor a weekly fubfiftance of three fhillings and fix. pence for folong as he remains in dureffe, which by fome men of no feeling or principle has often been done. Atiempts have been made at different times to enlarge this prifon, and build a diftinet place of confinement for debtors; but this beneficent pur pofe feems to have been defeated by a firit of jealoufy fubfifting, among the leading gentlemen of the ifland; fome having indulged a principle of wantonly oppofing every feheme and project offered for the advantage of this devoted town; others efpouling an opinion, that the county of Middlefex alone ought to bear fuch burthens, in which it is pretended that the other two counties are not at all interefted $\left[d_{j}\right.$ : while thofe who are of the county are unwilling that the whole expence thould be affeffed upon them, inftead of a general equal taxarion; alledging that, this town being the feat of government, public offices, and the chief courts of juftice to which civil and criminal matters are often removed from the other county-courts, the buildings neceffary to be ereited here,

[^2]
## J A M A I C A.

or fultained for the publick convenience, ought in reafon to be crected and fuftained at the publick charge; and undoubtedly, if the whole ifland is interefted in what concerns the feat of government, records, and juftice, which it certainly is, there is full as much reafon for a general tax to rebuild or repair the gaol as to rebuild or repair a houfe of refidence for the governor. Not far from the gaol faands the free-fchool, built and partly endowed at the expence of Peter Beckford, efq; formerly lieutenant-governor of the ifland, who left by will $1000 \%$ currency; which fum was borrowed by the public, and $10 \%$. per eent intereft allowed ever fince for the purpofe of better fupporting it: augmentations have alfo been made by other legacies; fo that the whole income at prefent is $190 \%$ per annum, of which the mafter annually receives $140 \%$ and the furplus is lodged in the hands of the treafurer, fubject to fuch ufes as the governors (confifting of the whole legillative body of the inland, the judges of the fupreme court, and the rector of this parifh for the time being) may think fit to direct. This foundation was incorporated by an act of affembly, and defigned for the inftruction of a certain number of boys, the offspring of poor parents, in reading, writing, grammar, arithmetic, and other mechanical and practical knowledge. It has generally from twenty-five to thirty poor boys; and, if it was well regulated, it might prove an ufeful feminary; fuch an education being fufficient to qualify the boys for a variety of profitable employments in the ifland: but it may be pronounced of this, as of many other charities of the like kind, that as yet it has ill-anfwered the intent of its founder. Near the fchool is the fhambles or mar-ket-houfe, where the butchers meat flaughtered in this town is by law appointed to be fold. It is under the direction of an officer, who receives a yearly ftipend as clerk of the market. His bufinefs is, firf, to fee that the meat expofed to fale is found and fit for ufe; and, if he finds it otherwife, he is to caufe it to be immediately burnt. He is likewife to prove all the fcales and weights ufed here and in the different fhops within the town; and, on difcovering any fraud or deficiency, he may levy the penalty impofed by law. He has a power too of arbitration in all difputes that may bappen between buyer and feller relative to weighing of meats and

## BOOK II. CHAP. VII.

17
other goods. There is a further power likewife vefted in him of more importance than all the reft ; which is, to fee that no butcher exacts more for his meat than the prices fettled by law; but this part of his duty has never of late years been complied with. The common prices of moft kinds of meat fold here are now generally double what the law has allowed; and little notice is taken of it. The market for butchers meat begins at day-break, and is ufually over by eight o'clock in the morning. The Jews have a butcher of their own, who flaughters and diffects in the Mofaic manner; the fecret of which feems chiefly to confilt in his choice of the fatteft, fineft fubjects. The hofpital is a fmall diftance from the market-place. It was founded by the charitable legacies and donations of well-difpofed perfons, and calculated for the reception of tranfient poor perfons; who are lodged, cloathed, fed, and properly taken care of: and a gentleman of the faculty is paid an annual falary by the public, for attending their fick, and furnifhing them with fuitable medicines. The barracks for the regular troops are fituated in the Southern quarter of the town, on an airy, healthful fpot. The front is a lofty brick-building, of two ftories. Behind it is a fpacious fquare court, furrounded with fhed-rooms: they are capable of holding three hundred men; but, the accommodations defigned for the officers having proved extremely improper for the purpofe, the men are too much left without a due controul, moft of their principal officers having lodgings provided for them at fome diftance in the town; fo that, for want of their refidence in the barracks, the privates have often committed riots, and other mifdemeanors at night, in the neighbourhood. Yet there is a very commodious unoccupied fpace adjoining, where proper apartments might be built for the officers; in confequence of which, the difcipline of thefe troops would be much better kept up, and a final ftop put to fuch enormities. Their hofpital ftands on the Ealt fide of the town, near the river, in a very ill-judged fituation; for the fupport of which building, and neceflaries for their fick, the affembly makes every year an ample provifion. Near it is the powder magazine belonging to the town; built of brick, and capable of holding fifty barrels; this is connantly guarded by a centinel. Juft acrofs the river, a fmall diftance from Vol. II.
this place, is a look-out, called Beacon hill, which had formerly a fiaff and colours raifed upon it, for the purpofe of giving alarm. As there is a very extenfive view from the fummit, commanding the harbour of Port Royal, and the Eaftern fhip-channel, in the offing, this appears the moft proper feite for erecting a fortrefs, if one thould ever be thought neceffary for better defending the town. At prefent, here is neither fort nor battery ; all its defence confifts in fourteen or fifteen fmall brafs field-pieces, honey-combed with age, and committed to the care of a captain, a lieutenant, and a company of matrofies, all of the militia; who flath a little powder from this train of artillery, to announce the royal birth-day, and a few other joyous occafions [ $e]$. Befides thefe, are two or three companies of regulars, and five or fix of horfe and foot militia, a medley of Chriftians, Jews, Pagans, Negroes, and Mulattoes. The Jews, who are numerous here, have a convenient burialground walled in, at fome diftance out of the town; and a fynagogue in the Eaftern quarter, not far from the river: this place of worthip has feveral well-adapted ornaments. Here they affemble, and read a portion of the Law and the Prophets every fabbath-day. They obferve moft of their antient feafts and fafts; and marry, circumcife, and bury, according to the cuftom of their fore-fathers. Some of them are good men, and do many benevolent actions to Gentiles as well as their own fraternity; but much the greater part of them (I fear) are very felfifh and tricking, fraudulent in their trade, and rigid in their tranfactions, not only with Chriftians, but with one another. Of the houfes erected by the Spaniards before the Englifh conqueft, upwards of fifty are ftill remaining, very little the worfe for time or weather. We are not informed of the particular time when they were built. The town was twice taken ; firt, by Sir Anthony Shirley in 1592; and afterwards by colonel Jackfon, about the year $163^{8}$; but hiftory does not men-
[e] It deferves the attention of the legillature, whether their procuring a new train of fieldpieces, of moderate fize, and a company of ikilful European matroffes, would not be of the utmof importance to the defence of the ifland. Whoever has read the progrefs made in Hindoitan, by a handful of European troops, cannot but be altonifhed at the victories they gained againft fuch unequal numbers, and folely by the right management of their artillery. A finall body of men, I with fuch a bulwark, may refift all the efforts of fifty times their number, who have no artillery: and it is no lefs ferviceable in an open plain, than in defending a paft.

## BOOK II. CHAP. VII.

tion that they deftroyed the houfes. It is pretty certain they ougru to bo regarded as antient, as it is now near one hundred and twenty years fince the invafion under Venalles. Their duration for folong a time in defiance of earthquakes and hurricanes, fome of which, fince the Englifh fettled here, have been fo violent as to demolifh feveral more modern buildings, is a demonftrative proof of the Spanifh fagacity, and affords an ufeful leffon to the Englifh inhabitants; for although thefe houfes are inconveniently fmall, yet this can be no objection to the method of flructure, fince it would be eafy to enlarge the plan, by lengthening the front, or by building three fides of a fquare after the Eaftern manner, which allows fufficient range for a great variety of apartments. The Spaniards had to guard againft the fudden concuffion of earthquakes, the impetuofity of hurricanes, the drift of the heavy periodical rains, and the heat of the fun. We find their houfes excellently well contrived to anfwer thefe different purpofes; with the further merit, that the materials of which they are built were cautioufly prepared in fuch a manner as to become extremely durable. A certain number of pofts of the hardef timber, generally lignum vite, brazilletto, or fuftick, of about eighteen feet in length, and fix to eight inches diameter, being firft well-feafoned and hardened in fmoak, were fixed at proper diftances to the depth of two or three feet in the ground; then a wall of brick, inclofing thefe pofts, was carried up with very ftrong mortar to the plate, which was pinned with wooden fpikes to the tops of the pofts. The main rafters were fmall, but, being of the like hard wood, and perfectly well-feafoned, were fufficiently ftrong: thefe were likewife pinned upon each other, and at their angle of interfection at top formed a crutch, to receive the ridge-pole. The fmaller rafters were of the leffer ebony trees, ftript of their bark, hardened in fmoak, notched at bottom, and being placed at the diftance of about eighteen inches from each other, were pirned to the plate. Athwart thefe fimall rafters, a firatum of the wild cane (arunde Indica Bambu fpecies), previoufly finoaked, was tied on by way of wattling, with ftraps made of the bark of the mohoe or mangrove trees. Upon thefe wattles, fome mortar was laid, to the thicknefs of about four inches; and the whole covered with large
pantiles,

## J A M A I C A.

pantiles, well bedded in. The thicknefs of thefe roofs, from the outward fhell or tile-covering. to the ceiling within, was about eight or ten inches. A canopy of fo folid a texture was certainly well contrived to Rhelter the inhabitants from the difagreeable effects of a vertical fun; and accordingly it is found by experience, that thefe old Spanifh houfes are much cooler than our modern ones, covered with flingles (or llips of wood half an inch thick, formed like flates), which are not only very fubject to be fplit in nailing, and fo create leaks, but are not folid enough to exclude the fun's impreffion, nor lie fo compact as to prevent a. fpray from being driven in by the wind in heavy fhowers, which occafions a moift and unwholefome atmofphere within doors. Befides, thefe fhingled tenements are very hot in the day-time, and cool at night; whereas the Spanifh houfes preferve a more equal temperament of air by day and by night. Their materials preferve them greatly from accidents by fire; and, confidering their ftability, they feem to be the cheapeft and beft-contrived kind of buildings for this ifland. It is plain, therefore, that the Englifh, in neglecting thefe ufeful models, and eftablifhing no manufacture of tiles, but erecting lofty houfes after the models in the mothercountry, and importing an immenfe quantity of North-American thingles every year for covering new roofs, and repairing old ones, confult neither their perfonal fecurity, their convenience, their health, nor the faving of a moft unneceffary expence $[f]$.

The chief error the Spaniards committed in their buildings was the placing their ground-floors too low: thefe were nearly on a level with the furface of the earth out of doors, or at moft raifed only a few inches higher. Some of their houfes in the town have, indeed, acquired a raifed foundation in the courfe of time; for, the torrents of rain having gradually wathed and hollowed the ftreets
[ $f$ ] It is remarked by Ulloa, that the walls of Caxamarca (an Indian town in Peru), and of feveral houfes in the neighbouring vallies, although built on the very fuperficies of the earth without any foundation, have withftood thofe violent earthquakes which overthrew the more folid buildings of Lima, and other large towns, erected by the Spaniards. Experience infructed the natives, that, in parts fo liable to earthquakes, it was improper to dig a foundation in order to ftrengthen the walls. He mentions it as a tradition, that, when the newly-conquered Indians faw the Spaniards fink foundations for their lofty buildings, they laughed, and told them, "they were " digging their own graves:" intimating, that earthquakes would bury them under the ruins of their houfes; a prophecy which has been moft fatally verified in the fequel.

बPJC?

BOOK II. CHAP. VII.
in fome parts lower and lower, the fucceffive inhabitants of thefe houfes were obliged to add a foundation where the water had undermined the walls, and from time to time, as the earth happened to be fwept away; fo that the foundations of many of thefe antient piles have in fact been laid long fince the fuperftructure. Their houfes had no piazzas originally : the Englifh made thefe additions, in order to render them more cool and pleafant. But they have been attended with fome inconvenience in another refpect; for, the ftreets being laid out, fome of thirty, and others not exceeding forty, feet in breadth, thefe fheds incroach fo far on each fide, that the midway is too narrow, and liable to obftruct carriages. The Englifh in general have copied the ichnography of the Spanifh oufes with great uniformity [g]. They are, for the moft part, foofed in three divifions: the centre room is a hall, communiCitigg at. each end with a bed-chamber; the back part, ufually a The is divided in the fame manner, and communicates with the fron or principal hall, by an arch, which in fome houfes is wainfcotte with mahogany, in others covered only with plaifter. They are fmal, atd rather inconvenient for a family, efpecially when it confifts of $\mathfrak{i x}$ or feven perfons. Great alterations have, however, veen made Ly he Erglifh inhabitants; and feveral of thefe old houfes have rece ed very confiderable additions, which make them more roomy and nmmodous. In the piazzas many families may be faid to live the greate1 part of their time; the fhade and refrefaing breeze invitug then to employ moft hours there, that are not devoted to eating drinling, and fleeping: nor can there be a more agreeable indulgnce enjoyed by the mafter of the houfe, than to fit in an elbow-char, with his. feet refting againft one of the piazza-columns; in this ttitude he converfes, fmoaks his pipe, or quaffs his tea, in all theluxury of indolence. Almoft every dwelling-houfe throughout th ifland is detached from the kitchen and other offices; which, thagh different from the practice in England, is a very judicious arangement for this climate, where the fumes and fmoak of the kihhen, and the ftench of other neceffary offices, would be intolerble in too near a neighbourhood. But few of the inhabitants are zurious in the decorations of their

[^3]
## J A M A I C A.

apartments: the halls are feldom adorned with any thing better than a large pier-glafs or two, a few prints, or maps: the greateft expence is beftowed upon the arch of the principal hall, which is generally of mahogany, and in fome houfes well-executed. They have for the moft part fluted pilafters, fupporting a regular entablature, ornamented with modillons, dentils, \&c. But it is more frequent to behold all the orders of architecture confufedly jumbled together. The windows of the Spanifh houfes were generally made with little turned pillars, placed upright, and fhutters on the infide. However convenient thefe might have been for the conftant admifion of air, they are at prefent almoft totally exploded, and fafhes more generally in ufe: to which are added jealoufy-fhutter, or Venetian blinds, which admit the air freely, and exclude e fun-fhine. It is but of late, that the planters have paid muct ar tention to elegance in their habitations: their general rule wrs to build what they called a make-gift; fo that it was not unufas to fee a plantation adorned with a very expenfive fet of wors, of brick or fone, well-executed; and the owner refiding iv a nizable, thatched hovel, haftily put together with wattles and laifts, damp. unwholefome, and infefted with every fpecies of wain But the houfes in general, as well in the country-parts a the towns, have been greatly improved within thefe laft twenty years. The furniture of fome of them is extremely coftly ; ardothers conftrucied in fo magnificent a ftyle, and of fuch curable naterials, as to fiew that they were not intended for a meretemporry refidence.

It might not be foreign to the fubjet hee to remark, that, by the general ufe of fhingle coverings nroughout the Northern and Weft-India colonies, and the utter nglect of planting young trees in the room of what are cut down fr this manufacture, it is very certain, that they will every year gow dearer to the fugar inlands, and that the price may increafe, til the people of Jamaica will be forced either to employ their owngrowth of timber for this ufe, or fall upon tile-making. The buders, therefore, of new houfes, or works, fhould confider this, ad make their walls of a due thicknefs to fuftain fuch an additioal weight hereafter.

## S E C T. II.

THE river Cobre, which wathes the foot of the town on the Eal, takes its fource near Luidas, and about twenty-two miles North-weft from the town, rifing in a cave, called River-head, and fuppofed by many to have a fubterraneous communication with Pedro's :iver, which is diftant from it about fix miles Weft. The Cobre lilewife buries great part of its waters, and does not form any conficerable ftream till it has run fome diftance from the cave. It is afterwards joined by the Rio Magno, Rio d'Oro, and Rio Pedro, with fome fmaller ftreams; fo that, on reaching the town, it is from fixty to eighty feet in breadth, and in feveral plates very deep, but in othes generally fordable, unlefs fwelled with the heavy rains whici fometimes fall in the mountains above. Its bed, where it ranges near the town, is depreffed and lowly, the water being in general not difcernible beyond the verge of its banks. The current here is rapid, though almoft filent. It is of unfpeakable fervice to this neighbourhood, not only in its conftant fupply of water, fo the ufe of the town, but in promoting cleanlinefs and health; fir every day throughout the year fome hundred Negroes and Mulatoes of both fexes refort to it from the town, to wafh their perfors and linen.

It has been imagned, that the Spaniards gave it the name of the Copper river, fromits paffing through a vein of that metal. But it is more probable, that they chriftened it after a fimilar name of fome river in Old Sain, as they are known to have done in regard to many others, and in particular the Rio Minho, in the parifh of Clarendon. Befides, although its water appears to have a fine blueifh tinge, efpecially where it runs between the two ranges of hills proceeding from:Sixteen-mile-walk, which has confirmed many in their opinion of its being tinctured with copper; yet this appearance is nothing more than a common deception, caufed by the azure of the fky reflected from the furface of the water, and remarkable chiefly where it is deepeft, the current moft gentle, and confequently the furface extremely fmooth, and therefore in the
fitteft fate to reflect images; and to this effect the great height and vicinity of the inclofing ridges very much contribute [ $b$ ]. It is ftrange, indeed, that the experiment, tried upon it fo long ago by Sir William Beefton, has not corrected this popular error; for he found, that with an infufion of galls the water acquired a deep green inclining to black [i]. But the moft certain teft of an intermixture of copper is made with the cauftic volatile alkali, as ffirit of fal ammon. combined with quick lime-water; thefe, if the fmalleft particles of copper be diffolved, would caufe the whole to affume a beautiful blue colour. This experiment was tred fome years fince by Doctor Browne, without producing any fuch effect. Now, as the teft of an iron impregnation is the black or dufky colour it ftrikes with the vegetable aftringents, fuch astincture of galls, and as the fofle alkali will give a greenifh caft, it feems pobable that this river is impregnated with no other metal than iron, and with a copious admixture of a calcareous earch, or lime. The purgative quality of the water, when drunk immediately from the river, is very properly conjectured by DoctorBrowne to proceed from the clay with which it is in general copoufly charged; becaufe it lofes this quality when fettled in jarsand cleared of its load; which would not be the cafe if it proceeled from falts, or a folution of metals ; and becaufe many other witers, of fimilar appearance, poffefs the like qualities in their turbid ftate, though known to be not impregnated with metallic fubtances. Agreeably to this opinion, it is found by the inhabitants of the town, who keep this water in large jars, that, after ftanding for fome time till the fæeculencies have fubfided, it entirely lofes the effect juft mentioned, and becomes as clear, foft, and pleafant, in its depurated ftate, as any water in the world. In this fate it was tried by an hydroftatical apparatus, and found equal in lightnefs to Briftol Hotwell water. We may therefore fafely conclude, that it has been very unjuftly ftigmatized; and that, if the Spaniards fuppofed it impregnated with copper, they adopted this miftaken notion

[^4]
## BOOK II. CHAP. VII.

through ignorance of the means by which its contents might be difcovered. In Old Spain the water is remarkably light, pure, and wholefome: to this, and the ferenity of the air, it is attributed that the Spaniards are free from the fcurvy, notwithftanding their indulgence in pork, the leaft perfpirable of all animal food. The Spaniards in America are therefore (from a national prejudice) particularly nice in the choice of their water, which forms the chief of their daily beverage. It is not improbable, what I have heard fome of the oldeft inhabitants of St. Jago relate, that the Spaniards formerly here ufed to be at the trouble of procuring water, for their common drink, from the Bridge river, fix niles Weftward from the town; and that all of them kept their drinkingwater in large jars, fo many in number as to have always one fufficiently clear for ufe, while others were in the courfe of depuration. The river Cobre, having a free current from the town to the harbour of Kingfton, uninterrupted by rocks or falls, and flowing through a pretty level, open country, might undoubtedly be made navigable up to it by means of locks; but the expence of fuch an undertaking, and the fhort diftance of land-carriage, are objections that may probably reftrain the inhabitants from ever attempting it. The river abounds with excellent mullets, mudfilh, eels, calapever, jew-filh, craw-fifh, and prawns. It has only one bridge, which croffes it in the road leading towards Sixteen-mile-walk. This bridge is flat, and compofed of planks on a frame of timber-work, which refts upon two fexangular piers, and two buttreffes projecting from the banks, conftructed with piles, and braces interlaced with mafonry. In great floods, the river has been known to rife feveral feet above the floor without injury, notwithftanding the vaft preffure of fo large a column of water. This is afcribed to the refiftance of the water below or under the flooring, which enables it to fuftain this weight above. In the year 1699, an arched bridge of brick was conftructed fome miles below the town, in order to keep open the communication by land with Kingfton; but, for want of a proper foundation, it was foon fwept away by a flood, and never fince re-built. Attempts have Jately been made to get an act pafted for buiding one at the publick expence, and more conveniently fituated; but, through Vox. II
fame firit of jealoufy which I have before noticed, and the difinclination of many to confider it as a matter of general benefit to the ifland, the fcheme was laid afide [k]. So that perfons, travelling by land to and from Kingfton, or the Eaftern divifion of the ifland, are obliged to ford or ferry over the river, and very frequently at the peril of their lives. Ridiculous as the prejudices of faction are in fo fmall a community, yet they are capable of producing mifchievous effects. Publick fpirit, and a liberal way of thinking, naturally tend to the ornament and improvement of every country where they refide. The contrary, or a perverfe and felfinh principle, excludes every thing that is great and generous from its narrow view, and.wages eternal war againft the public welfare. I am forry to fay the latter rule of conduct has been too predominant in this ifland ; but we will hope for a time when good fenfe and rectitude of heart fhall triumph over this falfe and groveling policy. The ftreets of the town, I have remarked, are rendered inconveniently narrow by piazzas added to moft of the houfes; the worft effect arifing from their want of due breadth is a great increafe of heat during the fultry months of the year, the wind not having fpace enough to circulate freely through them, and difperfe the confined air, which becomes very difagreeable from the reflection of fo many brick walls. They are repaired with pebbles brought from the river-courfe, which prevents their being clogged with mud, as fome other towns of the Weft-Indies are, and anfwer the end of a regular pavement, by not admitting the rain-water to ftagnate. They are kept tolerably clean by a publick fcavenger, paid by an annual affeffment on the houfes; and the filth collected from them is removed to certain places appointed on the outfide of the town.

The church-yard, being fituated in the windward part of the town, is very injudicioufly allotted for the common burial-ground. Dry weather occafions numberlefs chafms in it ; and the wet, which ufually fucceeds, infinuating through thefe apertures into the graves,

[^5]
## B O OK II. CHAP. VII.

there is reafon to believe, that noxious exhalations muft arife from them, which cannot fail of rendering the atmofphere untwholeforie to fuch houfes as lie in a proper direction to receive them. In the hot months, particularly June, another annoyance happens from the duft; which, by the power of the fea-breeze, generally violent at that time of the year, is blown into the houfes in fuch abundance, as to be exceedingly troublefome, and occafion fore eyes: the particles are fo fubtle, that it is very common to fee a diningtable, which has been perfectly clean before the cloth was laid, appear entirely covered with a fine powder upon removing it. The inhabitants, if they thut their doors and windows, are almoft fuffocated with heat; and, if they fuffer them to continue open, they are in danger of being ftifled with duft ; but, neceffity obliging them to the latter expedient, they fwallow it copioufly with their food. Thefe annoyances might attract compaffion, if they were not eafily remediable: the firft, by taking in a new burial-ground a little to leeward of the town; the next, by making ufe of water-carts, to fprinkle the ftreets, once or oftener in the day, during that time of the year when the duft has been found moft troublefome: fo fine a river gliding under the town feems, indeed, to point out this experiment to them fo obvioufly, that it is aftonifhing they have hitherto neglected it. The air of the town has always been efteemed healthy. But it is on the decreafe with refpeet to inhabitants. It appears, from the regifter of marriages, births, and burials, that, from 1670 to 1700 , the town and parifh contained above four times more white perfons than at prefent. They have even diminifhed fince the year 1746, as will appear by the following average-table of burials from that year to $175^{6}$ :

|  | White Refiants. | White Paupers and Tranfients. | Soldiers. | Free Blacks and Mulatoes. | Total. |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |
| annum of $\}$ | 61 | $12 \frac{5}{9}$ | 15 | $16 \frac{8}{8}$ | $104 \frac{6}{6}$ |

According to the above table, the whole number of Whites, exclufive of Jews, was probably about two thoufand, or near fix hundred more than the prefent. From the beft accounts it appears, that the average of marriages, baptifms, and funerals, ftands thus:

Marriages,

$$
\begin{array}{lllllll} 
& \begin{array}{llll}
\text { J }
\end{array} & \text { A } & \text { M } & \text { A } & \text { I } & \text { A }
\end{array} \text { A. }
$$

Of the baptifms, not above one-third are Whites; the marriages include all ranks and complexions; but the foldiers, paupers, tranfients, and free Blacks and Cafts, make up the greateft part of the burials. Hence it appears, that the marriages, and confequently the biths, are in no proportion to the deaths; and the decreafe of people may from this caufe be very naturally accounted for. The number of the inhabitants in this parifh may be thus eftimated, viz.

Refiant Chriitian Whites in the Town.

Ditto in the White Paupers Soldiers, including Jews. Free Blacks Country, and Tranfients. Wives and Children. and Catts. $\begin{array}{llll}308 & 176 & 240 & 350\end{array}$ $\left.\begin{array}{c}\text { Deaths } \\ \text { annually, } \\ \text { about }\end{array}\right\}$ in 24 Inhabitants. The regifters in this parifh have, like moft of the others in the inland, been very incorrectly kept. They are, however, tolerably perfect from 1669 to 1702 , and from 1746 to the prefent time. The want of due regularity prevents them in general from being ufeful for grounding calculations of this fort. If the feveral rectors had been obliged to enter attefted copies of their regifters once a year in the fecretary's office, we fhould have poffeffed very competent information upon this fubject.

The Jews here are remarkably healthy and long-lived, notwithfanding their diet is frequently falt-fifh, and fuch kind of aliment, not generally efteemed very wholefome; and that the greater numbor of them deal in damaged falt-butter, herrings, beef, cheefe,

## BOOK II. CHAP. VII.

and in train-oil; a congregation of ftinking commodities, which is enough to poifon the air of their habitations. Their fhops may be fcented at a great diftance; and, in what is called the Jew-market in this town, a whole ftreet of their houfes reeks inceffantly with thefe abominable odours. But thefe people are abftemious, and fo temperate, that a drunken Jew is rarely feen. They are particularly nice in drinking the pureft water, which moft of them ufe unmixed; and others make only a very fmall addition of rum. They are exceedingly fond of garlic, which generally has a place in all their fauces, and is known to be a great antifeptic ; and they indulge in chocolate. The more luxurious among them gormondize chiefly on filh; and no doubt but their religious fafts, of which they are very rigid obfervers, now and then interpofing, affift in freeing them from noxious redundancies. I think they may be fuppofed to owe their good health and longevity, as well as their fertility, to a very fparing ufe of ftrong liquors, their early rifing, their indulgence in garlic and fifh, their adherence to the Mofaic Ritual in the choice of found and wholefome animal food, their free ufe of fugar, chocolate, and nourifhing fruits, their religious purifications, and fafts. The free Negroes and Mulattoes fare rather harder in refpect of eating, and are not fo averfe to fpirituous liquors; for both men and women are frequently intoxicated: but their way of life is more laborious; they are more abroad in the open air, which renders them hardier; and their occupations or amufements give them fuch conftant exercife, as to keep them. from fuffering by repletion: befides, their diet confifts chicfly of nourifhing broths, in which pulfe and vegetables are principal ingredients. They too are very fond of good water and chocolate; they indulge in fmoaking tobacco, devour large quantities of pepper fuch as this country produces, and feldom let a day pafs without bathing, and foouring their $\mathfrak{k k i n s}$. Their bodies and conftitutions feem peculiarly adapted to a hot climate; yet, perliaps, they owe their health not more to this adaptation, than to their mode of living; funce it is certain, that the native Whites in this ifland, I mean fuch of them as are not addicted to drunkennefs, nor have any hereditary diftemper, are equally healthy and long-lived.

## $J A M A$ I C A.

The greater mortality, obfervable here among the foldiers and tranfient Europeans, muft be afcribed to their importing with them the Englifh cuftoms of eating and drinking in excefs, but chiefly the latter; and their liberal indulgence in a vile fophifticated compound of new rum, pepper, and other ingredients, brewed here by the Jew-retailers; who, as they pay a tax on their licences, and a duty on the rum they retail, have recourfe to this villainous practice, in order to enhance their profit upon the miferable confumers, who are chiefly the foldiers, and meaner clafs of Whites. That this has been, and is ftill, the main caufe of bad health among the troops is evident; for, when they are in quarters not locally unwholefome, and where they cannot get at it, they are known to be very healthy. If the fpirit was even fold to them without this adulteration, it could not fail of producing fatal effects; for the Jews could not afford to keep it fo long on hand, as to become what is called old rum, and then retail it at their ufual low price. They would therefore fell it frefh from the ftill; in which fate it is fofiery, as to be no lefs unfit for human potation, than burning brimftone ; yet fome of the foldiers have been known to drink off a bottle of it at one fitting. The officers have often attempted to check this evil, by punifhing the delinquents; but a more certain method would be by prevention. The common foldiers, employed in the Weft-India fervice, or at leaft the recruits fent over, have frequently been the very refufe of the Britifh army: thefe men cannot be broke of their fottioh habits; but, fince they muft and will have fpirituous liquor, care might be taken to provide them with fuch as, while it gratifies their inclination, may be the leaft detrimental to their health. The commanding officer (for example) in town might appropriate a certain part of their country pay, and lay in every year a flock of the beft rum, free from all bad tafte and fmell, and permit it to be retailed by a futler to the men; taking care, that none fhould be iffued of lefs than a twelvemonth's age, and limiting the price to what they now pay the Jew-retailers, which could very well be afforded, as the foldier's rum is exempted from all duty. The futler chofen for this purpofe would no doubt be a man on whofe fobriety and honefty they could fafely depend; at leaft, fhould he be guilty of breach

## B O O K II. C H A P. VII.

breach of his truft, he would be liable to a regimental punifhment. The terror of this would form a fecurity for his good behaviour; the men would be much better pleafed, and beyond any doubt more healthy.

The town is partly under a civil and partly military police; a kind of divifum imperium, which the civil power exercifes by day, and the military by night. The civil government confifts of a cuftos, or chief magiftrate, and the inferior juftices of peace and conftables. The centinels here, after the day is clofed, according to an antient ufage, which has fubfifted ever fince the days of Cromwell, challenge all paffengers, as in a regular garrifon, and patrol the ftreets at certain hours, to apprehend all offenders againtt the peace, and prevent robberies. It is a certain proof of the more regular lives of the families here, as well as in Kingfton, than heretofore, that at eleven o'clock at night it is very rare to fee a light in any houfe, except the taverns; and even thefe are now very feldom infefted with riots and drunken quarrels, which formerly were fo common. The town was antiently a regular garrifon, the ditch ftill remaining which was thrown up by the Spaniards towards the favannah, and terminated at a baftion flanked with a fortified building, called the Fort-houfe, the name of which is fill preferved. The plain, of which the favannah is a part, extends, in its whole length, not lefs than twenty-two miles; but its breadth is unequal, being in fome parts ten miles, in others five, and, towards St. Dorothy's, grows more and more contracted, till it does not exceed three. After leaving this end of it, and paffing to the N. W. among the Clarendon Hills, we meet with fmaller levels here and there, as the Palmeto and Lime favamahs, till we come to St. Jago favannah, where the champaign again enlarges to the extent of about ten by fifteen miles. Thefe tracts were-formerly exceeding beautiful, having only fome clumps of graceful trees irregularly fcattered over their face, which gave but little interruption to the profpect. I have been informed by an elderly gentleman, a native of the ifland, that he could remember the time when they were nearly in this ftate; but at prefent they are overfpread and disfigured in moft parts with the achaia, or American opopinax, a dwarf prickly tree, which it is found almof impoffible to

## J A M A I C A.

erdacate. It infefts the pafture-lands, and incroaches continually on the roads, to the very great annoyance of travelers, efpecially by night, when they cannot fo well guard their faces from being feratchod; fo that a man, who rides among them in the dufk, is obliged to keep his whip and hands in conftant employment, in order to parry the over-hanging branches. That part which bounds on the Weft fide of the town, and called the Town favannah, confifted formerly of one thoufand two hundred acres, allotted for exercife, and has a common of pafture for the ufe of the inhabitants; but, feveral perfons having fettled upon and occupied the ikirts of it, the parithioners obtained an act for enabling them to leafe out feven hundred acres, at 5 s. per acre, and footland at 6 d . per foot; and referved the remaining five hundred to be kept open and clear, at the expence of the parifh, and for ever to be held facred to the purpofes only of exercife and health. The face uninclofed is about two miles in circumference. Here the races are generally held every year in the month of March. For encouraging a breed of large horfes, one hundred piftoles are annually granted by the affembly, by way of king's plate, to be run for by any thone-horfes or mares, carrying ten fone each, of fourteen pounds to the fone. There are generally two days fport, befides either byematches, or a fubfoription purfe. On thefe occafions the concourfe of people is very great; fome thoufands are feen affembled on the favanuah; and the multitude of carriages and horfes, all in motion, form a very pleafing part of the amufement. On this plain the regular troops, and fometimes the militia, are trained and reviewed. But its principal ufe is as a paleftra, for the daily exercife of the inhabitants of the town in the morning and afternoon. In manner of living, the Englifh here differ not much from their brethren at home, except in a greater profufion of difhes, a larger retinue of domeftics, and in wearing more expenfive cloaths. The climate obliging them to ufe the finer fort of fabrics, there are of courfe the moft coftly; and hence appears the great advantage to the mothercountry of furnifhing her Weft-India colonies with their cloathing. The fuperior finenefs of manufacture is all clear gain to her artifts; and the conftant wear, by the effects of perfiration and wathing, accafions an immenfe confumption. The thick, cheap, and du-
rable cloths, which are well-adapted to the frozen zone, will not anfwer here; and the atmofphere corrodes every kind of iron or fteel ware very quickly. The demand therefore for numberlefs products of the home induftry is (from a train of invariable caufes) likely to continue as long as thefe colonies continue to exif. Here are none of the fubftantial inhabitants who do not keep their coach or chariot with four or fix horfes. The Mop-keepers have their two-wheel chaifes, or kitereens [l]; and they who cannot afford a carriage, even to the pooreft free Negroe, will not be without a faddle-horfe or two. As this is an inland-town, it derives its chief fupport from the refidence of the governor and publick officers; the gentlemen of the law ; the affembly and council; and the conflux of people who refort hither from the country parts on bufinefs, particularly during the fittings of the fupreme or grand court of law near four months in the year; and the feffion of the affembly, which generally lafts from the beginning of October till the Chriftmas holidays. At thefe times univerfal gaiety prevails; balls, concerts, and routs, alternately hold their reign. The governor, according to antient cuftom, gives a ball and entertainment once a year at the king's houfe, in honour of his majefty's birth-day. The appearance of company on this occafion 1 is generally brilliant, the ladies vying with one another in the richnefs of their dreffes; every one makes a point of exhibiting a new fuit of finery; and this regulation is fo lavifhly indulged, that fuch a ball is feldom attended with lefs than three or four thoufand pounds expence to the guefts, which however is fo far excufable, as it is laid out in Britith manufactures [ $m$ ]. When the town is full of company, here is a very good market; at other times of the year, it is but indifferently fupplied. In general, the mutton is much better, and the beef much worfe, than in Kington; the latter town being furnifhed with beeves from the rich paftures of Pedro's Cockpits, where the fattened cattle are inferior to none in America. The mutton confumed in Spanifh Town is chiefly brought from the adjacent falt-pan paftures, and
[l] So called from the firt-imported, which came from Kettering, in Northamptonfhire.
[m] During one half of the year, the inhabitants enjoy all the ftilnefs and'traiquillity of a country-village; and, $i$ in the other, the fene is totally changed, and they revel in the pleafures of a town.

Vol. II.

## J A M A I C A.

the penns of Vere; it is fmall, but delicioully fweet, fat, and juicy. The market is likewife tolerably well-fupplied with fea and river fifh, black crabs, the Jamaica oyfter, poultry of all forts remarkably fine, milk, vegetables, and fruits, Weft-Indian and North-American. The flour comes for the moft part from NewYork, inferior to none in the world; and the bread is excellent. The butter is imported from Cork and North-America, which cannot be much commended: the inhabitants, reconciled to it by cuftom, thew no diflike to it, although it is fometimes fo rancid, that repeated wafhings will not fweeten it. Some few in the lowlands make a fort of frefh butter, but in fmall quantities, and commonly infipid. The vales of Pedro are capable of fupplying the town with this article, if the penn keepers or graziers. there were encouraged to manufacture it for fale. What is manufactured there for their own ufe is of a delicate flavour, and will keep good for feveral days, and even weeks. The cheapnefs of the imported butter, which is generally fold for fixpence fterling the pound, and the great plenty of it, together with a long continued habit of ufing no other, may be the reafon why the inhabitants are not very folicitous about making any change; but it would doubtlefs be attended with a confiderable faving to the ifland, and tend much more to health, if they were to promote and eftablifh fuch a manufacture among the inland penn-keepers. It is fome time before an European palate can accommodate itfelf to the rank ftuff ferved up at the tables here. On the other hand, I have known many perfons who, upon their firf arrival in Britain from Jamaica, could not endure the tafte of frefh-butter; and I have heard of a lady who, for fome years after her coming over to England, ufed to order fome firkins of the Irifh butter to be brought regularly to her from Jamaica: fo difficult it is to relinquifh what cuftom, altera natura, has made agreeable to us.

As fome readers may be defirous of knowing the market-prices of provifions in this town, I fhall offer the following table, formed agreeably to the experience of fome years. It muit be underfood, however, that here, as in other places, there can be no fuch thing as a fandard and invariable rate for thefe neceffary articles;

## BOOK II. CHAP. VII.

and that their rates muft vary according to the reigning plenty or fcarcity, and other predominant caufes.

Jamaica Currency. Reduced to Sterling.

Oyfters are fold in fmall bafkets, and variable in price; as are likewife many of the articles above-mentioned; on which account, I have given their average loweft and higheft rates of feveral years.
The variation of price is caufed by the occafional plenty or fcarcity
incident to them. The vaf abundance of fifh caught here, and its not being a provifion that can be kept fweet for any long time, are the caules of its cheapners at moft of the fea-ports. Fifh and turtle are often fold at lefs prices than are expreffied in the table; and they furnifh a confiderable part of fubfiftence to the people inhabiting thofe places. The prices in Spanifl Town are in general higher than in Kingfton, where the market is under a better regulation, and both the demand and fupply more conftant and ample. The latter town is alfo far better accommodated with vegetables of all kinds, produced in the Liguanea mountains.

By the above table, compared with the following, may be feen how much the prices of fome provifion have rifen above what they formerly were. An act of affembly, paffed in the year 1693, eftablifhed the rates thus, viz.

| Beef and goat, _ per pound, | 0 | 4 | 0 | 0 | 3 | 0 |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Mutton, | ditto, | 0 | 6 | 0 | 0 | 4 | 1 |
| Veal, prime parts, | ditto, | 0 | 9 | 0 | 0 | 6 | 3 |
| Ditto, other parts, | - |  |  |  |  |  |  |
| ditto, | 0 | 7 | 2 | 0 | 5 | 3 |  |
| Hog, lamb, and turtle, | ditto, | 0 | 7 | 2 | 0 | 5 | 3 |

The fettlers in thofe days were fewer in number, yet either found means to fupply a larger quantity, or be contented with fmaller gains. In the year 1672, Doctor Blome writes, that horned cattle were fo numerous, that, although there had been every year fo many killed, yet their number feemed not much to be leffened. Hogs too he mentions were in very great plenty, as well thofe wild in the mountains, as tame in the plantations. We may conjecture, therefore, that the greater part of the beef and pork, then brought to market, were of the wild fort; for thefe animals overran the woods and favannahs, and were flaughtered by all perfons who chofe to go in queft of them. This probably made the fettlers fo very inattentive to the breeding of cattle, that in procefs of time, as the wild ones became diminifhed, and the plantations increafed, they began to introduce a fupply from the Spanifh Main. A dependence upon thefe importations, and the low price which they formerly coft, ftill further difcouraged the ifland-breed; and at prefent the fugar-eftates, fo vaftly increafed in their number, confume

## BOOK II. CHAP. VII.

fume a large proportion of what are bred here. There feems no remedy for this, but, by an act of legiflature, to encourage the ifland-breed, and throw gradual reftraints upon the importation; by which means, beef might poffibly, in courfe of a few years, return to a more moderate price; which would be a very defireable event to the inhabitants, and even to the breeders themfelves; to whom the certainty of demand, and largenefs of confumption, would make amends for the diminution of price; and thus might be faved many thoufand pounds now paid for foreign falted beef, which is neither fo wholefome, nutritious, nor pleafing to the white fervants, foldiers, and others, as frefh meat. The high price of fowls, and the other fmall articles, is to be lowered by the introduction of more fettlers, by encouraging a traffic in fuch articles, and particularly enlarging the annual plant of corn, the fcarcity of which is the fole caufe why eggs are in general fo cheap, and poultry fo dear; for, when corn is fcarce, fowls will devour more of it in value than they yield at the market. The greater abundance there is provided of thefe foods, the more money will be faved to the ifland in various ways; and it would confequently grow more populous and thriving, and better able to maintain families; a matter of the utmoft concern to all who wih to fee it flourifh; marriages, the beft fource of well-peopling it, and from which fome men pretend they are at prefent deterred, from the expenfivenefs of houfekeeping, would be greatly promoted; nor would many ufeful perfons emigrate from the colony, if they could live in it at as cheap a rate in general as in Europe. To live otherwife in an ifland, fo fertile and fo capable of affording not only the comforts, but the luxuries of fuftenance, in the greateft profufion, is a reproach to induftry and policy; but to adminifter fit and practicable remedies will redound equally to the honour of legiflature, and to the public welfare. Spanifh Town covers a large extent of ground, many of the houfes having great areas, and feveral lots being vacant or unbuilt. Thefe circumftances render it the more healthy and pleafant; and a variety of trees in confant verdure, being fcattered among the buildings, more efpecially in the fkirts, it has the rural appearance of a village. The town feems, however, to be rather on the decline, not having

## J A M A 1 C A.

yet recovered the blow which it received during the adminiftration of governor $\mathrm{Kn}-\mathrm{s}$; who, in order to carry a favourite point againft the country, and in furtherance of this defign to gain a majority in the two other branches of the legiflature, very artfully cajoled into his intereft feveral opulent merchants and principal inhabitants of Kingfon, by hinting to them a plan of removing the feat of government, the courts of juftice, and public records, to their town. The lucrative confequences of this project were defcribed in fuch captivating terms, that they joined heart and hand with him to effect it; and at length, after a violent ftruggle which threw the whole country into commotions, they fucceeded by gaining a corrupt majority in the houfe of affembly, garbled by very iniquitous and illegal practices. The deprivation of thefe main fupports, and the uncertainty of property in a town liable to fuch mutations at the arbitrary will of a governor, reduced its inhabitants to the utmoft diftrefs: fome quitted it; and many perfons were deterred from purchafing land, or occupying houfes in it; while all thofe, who fubfifted in its neighbourhood by fupplying the market were agitated with the dread of inevitable ruin. Upon a full difcuffion of this matter before the board of trade, and a juft reprefentation fubmitted to the king in council, the fcheme appeared fo wicked and injurious to private rights, as well as public welfare, that the projector of it was recalled, and exprefs inftructions given his fucceffor to fummon a new and legitimate affembly of reprefentatives: which being complied with, they paffed a law, reinftating the feat of government, offices of record, \&cc. in Spanifh Town, and eftablifhing them there immutably: and this law was afterwards confirmed by the crown.

But the town has not yet recovered its former population and opulence. The proprictors of houfes and lands in and near it are fcarcely yet free from apprehenfions of another removal ; and their terrors have fince been awakened, more than once, by attempts from the Kingfton quarter to repeat the blow, by purfuing the former mode of acquiring an undue majority in the houfe of affembly, for the purpofe of repealing that law. Hence has arifen a confirmed party in that branch of legiflature; and the great ftruggle at every election is, to regulate the balance of power in the new houfe.

## BOOK II. CHA P. VII.

houfe. Each fide, through a fecret jealoufy, is too apt, by an uniform fyftem of oppofition, to reject various meafures of public utility, which are greatly wanted, for the improvement and general benefit of the inaud. It is much to be regretted, that fuch animofities fhould fill prevail; and more fo, that caufe fhould be given for keeping them alive. An artful and malevolent governor alone could wifh to foment the fpirit of difcord, with a view of turning it to his own advantage, by fidiug with the ftronger party, and thus acquiring a fet of advocates ready to promote or vindicate his rapacious and unjuft proceedings. A wife and good governor will think he beft ferves the king and his fubjects by fteadily difcouraging every attempt towards re-kindling this deftructive flame.
The fituation of this town, fo centrical with refpect to the whole ifland, renders it extremely convenient for holding the chief courts of juftice; and to this end it is fill further adapted, as being undifturbed by the noife and tumult ufual in places of great trade. The records are fafer here; becaufe, upon the invafion of an enemy, it is too diftant from the fea-coaft to be firft attacked, and there would be ample time for removing them into Sixteen-mile-walk; or, ftill further, to the inmolt receffes and fortreffes of the ifland, for their fecure prefervation. Thus, although the town might be afterwards taken and plundered, the records would be fafe; nor could an enemy follow them expeditioufly, if they may be fuppofed an object worth acquiring; the road leading to Sixteen-milewalk being full of places proper for ambufcading, or eafily rendered impaffible by felling of trees, and throwing down fome of thofe huge rocky maffes which over-hang it. The town ferves befides as a grand fore-houfe, or magazine, for fupplying great part of the county of Middlefex with articles of cloathing, hufbandry, falt-provifion, and other neceffaries, moft of which are brought from Kingfion, which therefore is very much benefited by this extenfion of its inland commerce; an advantage it would not, in all likelihood, enjoy without the affiftance of Spanifh Town; for, in this cafe, not only the confumption of fuch articles muft be grently diminithed, but many of the planters would probably rather import what they wanted, or eftablih a new mart at Yaffage Fort, as being far more convenient for their bufinefs than Kington. Confidered
alfo as a garrifon, it will appear to form a great additional ftrength to the midland-part of the ifland, and has fo proved in feveral internal difturbances that have occurred from Negroe mal-contents; particularly in 176 I , when the detachments of horfe-militia and regular troops, ordered from hence, to quell a dangerous infurrection, which had broke out in St. Mary's parifh, arrived there fo expeditioully, as to give almoft immediate protection to the inhabitants. A colony of fuch extent would unqueftionably become much fecurer, if more towns were formed in convenient parts of it. Inftead therefore of labouring to ruin a town fo antient and beneficial, the men of fenfe and fortune in the ifland fhould rather endeavour, by fuitable encouragements and provifions, to found new ones in thofe uncultivated diftricts where congregations of people are much wanted, to add more links to the chain of communication, which ought to pervade every part of fo fruitful and delightful a country.

The conteft about removing the feat of goverument, before-mentioned, became the caufe of fetting up a printing houfe in this town ; for, before that æra, the votes of affembly were printed at Kingfton. But the partizans of Spaniif Town formed an affociation to fupport a new prefs in their town. From this iffues a weekly paper of intelligence, compiled moftly from the London and North-American prints; but it is chiefly convenient to the inhabitants as a vehicle for advertifements of different forts. Some occafional pamphlets have likewife received their birth from it; and a new edition of the laws was lately preparing. The voies of affembly and the annual bills are printed here; the journals of the council are printed in Kingfton, where two preffes are eftablifhed, and two weekly papers. Thus each of thefe branches of legiflatiure having its feparate prefs, I need not remark, that, when political diffrences arife, an extraordinary employment is given to thefe machines, by appeals to the public, and thearguments oneither fide pro and con: but it is doubtful, whetherthefe difputations, carriedonasthey generally are with great vehemence and acrimony, do not tend more to exafperate than to conciliate. The prefs of Spanifh Town was devoted to a far better ufe, when the affociation of gentlemen be-fore-mentioned made it fubfervient to the interefts of morality, and

> BOOK II. CHAP. VII.
the improvement of the ifland, by publifing a weekly effay under the title of The Planter, which was fupported for a confiderable. time in a lively, entertaining manner. In a garden belonging to Mrs. T-s, in this town, are two trees called baobab, or the great-cotton, defcribed by Adanfon, in his account of Guiney, from whence the feeds were brought and planted here. Some call this likewife the capot tree; of which feecies Bofman relates, that he has feen fome capable, with their fpreading boughs, of fhading twenty thoufand men, if ranged clofe; and fo tall, that a mufquet fhot could hardly reach the top. At Axim, there is faid to be one which ten men could not grafp; and, in Prince's ifland, another, the trunk of which could not be furrounded by four and twenty men, their arms at full ftretch: not that the body itfelf is fo enormous; but the fprouts adhere in fuch a manner as to feem to form one uniform trunk. The wood is light and porous, fcarcely fit for any other ufe than making canoes. The tree bears a fpecies of cotton, ufed in Guiney by the European factors for ftuffing beds, inftead of feathers. Thefe in Spanifh Town are as yet of only a moderate bulk; but, if they fhould fpread in time into the diameter reported by thefe authors, they will require much more room than has been allotted to them. The bark and leaves are faid to poffers fome virtues in the cure of fevers. And they deferve to be propagated ; but the beft fcite would be the rich bank of fome river.

Paflage Fort, formerly called The Paffage, from its being the place of embarkation for Port-Royal, is fituated on the Weft fide of the harbour, about three quarters of a mile from the mouth of the Cobre, and fix from Spanifh Town. It was once defended by a fmall fort, of ten or twelve guns, which has long fince been demolifhed. It is at prefent a fmall village, confifting of about fifteen houfes, chiefly inhabited by wharfingers, warehoufe-keepers, and the mafters of wherries and hackney-chaifes, which conftantly ply here with paffengers to and from the towns. Thefe wherries generally put off from Paffage Fort from fix to feven o'clock in the morning, before the fea-breeze fets in, and are favoured with a gentle land-wind. On their return, they go directly before the breeze, which fometimes blows up the harbour with great violence. Vol. II.

## J A M A I C A.

They are accommodated with tilts or awnings, and navigated entirely by Negroes. This is a barquadier for Spanifh Town, and moft of the plantations in St. Catharine, St. Thomas in-the Vale, and St. John. The merchant-fhips which load from hence ufually lye off the hofpital of Greenwich, where they receive their cargoout of large boats, or lighters, there not being depth of water fufficient for veffels of burthen to come nearer the wharfs. The fituation is low, and fubject to inundations from the harbour in ftorms. This place is famous in the annals of Jamaica for the landing of colonel Jackfon in $16_{3} 8$, and of Venables in 1655 . The firft-built town was wholly deftroyed by the great earthquake of 1692 , and never thoroughly rebuilt; nor is it probable that it will ever grow again into a town. The want of fufficient depth of water, perhaps, firft induced Mr. Henderfon, an enterprizing and firited gentleman, to form a new and more convenient fhipping-place on the North-Eaft fide of Salt-pond hill, under cover of the Twelve-apoftle battery; this he has effected at a very large expence, and with much judgement. The depth of water admits fhips of burthen very near to the wharf, and already. there appears the dawning of a new town; which, by attracting the moft confiderable part of the bufinefs, feems to forebode the fpeedy decline of Paffage Fort. This new barquadier is called at prefent by the name of Port-Henderfon; and, befides its ufe for fhipping off fugars, and other produce, with the utmoft difpatch, it has opened a ready communication on that fide of the harbour with the fquadron and Port-Royal Town; which cannot fail of proving extremely convenient, more particularly in time of war: At the back of Salt-pond hill is a remarkable cave. The adit leading into it is narrow and low ; but the cave iffelf is from twent ty-five to thirty feet diameter, and of good height. The floor of it is ftrewed with human bones; and there runs a tradition among the Negroes, that a white perfon many years ago colle Zed a vaft pile and confumed it to afhes: a large quantity ftill remairs; and, from the conformation of the fkulls, they are thought to have been Indian. Some have imagined that the Indians made ufe of thefe receffes as a fort of catacombs, or offuaries, for their dead. The antient Mexicans laid their dead bodies without burial on the furs

## BOOK II. CHAP. VII.

face of the earth, and environed them with ftones or bricks. Thefe rocky chafms and cavities, frequent in many parts of Jamaica, naturally offered as convenient and durable fepulchres. But this conjecture, though ingenious, is not fupported by any proof, that the Indians of this ifland were governed by the fame cuftom. There are better grounds for fuppofing, that they interred their dead; and that the bones, found in thefe places, are no other than the relicks of the laft remnant of that unfortunate people, who perifhed here beneath the infupportable tyranny of their conquerors, as I thall hereafter take occafion to relate.

Spanifh Town is defended on the South by a range of hill, called Healthfhire, corruptly Hellfhire, about nine miles in length, and fix in breadth; which fpace contains about thirty-four thoufand acres, for the moft part fo rocky and barren, as not to be worth inhabiting. Its chief produce is lime ; which is made here in large quantities, and fent by water to Kingfton. The air on thefe hills is extremely healthy: the rocks are concealed from view by innumerable aromatic herbs, fhrubs, and trees, poffeffed of great medicinal virtues, though hitherto explored only by a few curious perfons. This whole diftrict is filled with the larger fpecies of mockbird, whofe lively notes ferve to chear its dreary vales. The curatoe and aloes grow here very luxuriantly; and fome experiments have been made, by a gentleman who lived here, with the filk-grafs and grape-vines, which were found to thrive extremely well. The foil is alfo productive of potatoes, yams, and other Wert-India roots, and all the melon tribe, in great perfection. There is an exceeding good fifhery on the coaft; but the want of water-fprings, there being only one, that I have heard of, in the whole tract, and the few articles of profit to be gained from fuch a foil, will probably be the means of its remaining for the moft part in a ftate of nature. The ridge of high land, part of this tract, which faces PortRoyal harbour, is called Salt-pond Hill, from a large piece of faltwater on the South Weft fide of it, covering near feven hundred acres. This was formerly a falt-work; which, with two more in the parih of St. David, was conducted by a captain Jofeph Noye, who made from them in one year ten thoufand bufhels, and affirmed, that he could have made as many tons, if there had been
a vent for fo much at the market. But the great manufactory of falt at Tortuga caufed this article to fall fo cheap, that it has for many years paft been difcontinued in Jamaica. This falt-pond is about four feet in depth, and moft plentifully ftocked with good fifh; which are a more profitable article of traffic to the prefent owner, who fends them daily for fale to Spanifh Town, little more than fix miles diftant.
The parifhioners of St. Catharine, St. Thomas in the Vale, and St. Dorothy, formerly exercifed a fort of right in common of making falt here, for the ufe of their families: but, during the government of Sir Thomas Lynch, they agreed with Sir Thomas Modiford, who had patented the circumjacent lands, that he fhould deliver them annually at the rate of half a bufhel of falt per head, including Blacks and Whites, only not to exceed five thoufand bufhels in the whole; for which they were to pay is. per bufhel. This agreement was confirmed by an act of affembly, but has been for many years difured.

About four miles North and North-weft from the town is another range of hills; over which is fcattered a great number of polinks, or places applied entirely to the cultivation of garden-ftuff, fruits, and fuch fort of provifion, for the town-market. The range, diftinguifhed by the name of the Red Hills, from their reddifh foil, is thought to produce the feveral Weft-India fruits, of a better flavour than almoft any other part of the ifland. Many of the town-inhabitants have little fettlements here, with good houfes, to which they occafionally retire. No part of the world can enjoy a more agreeable or healthy air. The Spaniards formerly efteemed it a Montpellier ; and numbers ufed to pars over from Cuba, in order to refide here for the re-eftablifhment of their health. From many parts of thefe hills the profpect is rich and extenfive, commanding a view of the town, the paftures adjacent, the harbour and ihipping at Port Royal, and of the veffels coming in or going out. Thefe hills are deftitute of fprings ; but the inhabitants eafily fupply that want by preferving rain-water in cifterns or jars, which they find extremely pure and falubrious.
The foil of St. Catharine's parifh is various. The hills abound with lime-ftone rock; the champaign confifts chiefly of favannah

## B OOK II. CHAP. VII.

land, or a rich brick mould; the pafture lands in the neighbourhood, and what lie adjacent to the river, are of the latter kind; the rainy feafons have been for many years too uncertain in this part of the country for the cultivation of the fugar-cane, to which the nature of the foil is excellently adapted: but the richnefs of their grafs makes amends; and the owners draw confiderable profit by breeding cattle and fheep, and fattening for the town-markets. Indigo once flourifhed in all this diftrict. Attempts have, within thefe few years, been made by one or tivo gentlemen to revive it; but dry weather baffled their project, and convinced them of its impracticability. The well-water in thefe parts is in general brackifh, or containing an admixture of falt; which feems to indicate the exiftence of falt mines here; but none have yet been difcovered ; and probably they lie at too great a depth to be of fervice if they are ever known. There are other wells of a very pure water, fupplied probably by fprings or fubterraneous currents, which do not pafs through any ftrata of this foffil. That falt is plentifully intermixed with the foil here in fome places is evident from the licks to which cattle and heep greedily refort. I have feen feveral of them in the neighbourhood of the town. Thefe animals are known to be extremely fond of falt; and inftinct directs them where to find it. They experience its good effects in correating the deleterious quality of the crude grafs, produced here, from fudden heavy rains fucceeding a drowth. On thefe occafions, they are fubject to violent diarrhœas, which are frequently mortal. The penn-keepers ufe no other remedy than mafhed, pickled herrings, given them by way of a drench, which, if the diforder has not continued too long, performs a certain cure. There is no doubt but the falt, and not the fubftance of the firm, is the remedy ro which their curcis to be afcribed; and this is further confirmed by the common obfervation, that fheep, paftured on the falinas, or lands contignous to the fea, are not afflicted with the rot; and that the cattle, watered from a brackin woll, are much lefs apt to be fooured with the crude grafs than others.

The air of the flat country comprehended within this parifh is efteemed in general very healthy, except after the fall of the autumnal rains; when the water, fagnating for fome time on the low
grounds, is thought with good reafon to be productive of aguifh complaints, intermittent and remittent fevers; from all which, the adjacent hills offer a certain afylum to fuch of the imhabitants whofe circumftances admit of their removal.

The following comparative table may give fome idea of the modern fate of this parifh:

|  |  |  | Quantity of Sugar in one Year. Hogheads. |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

## S E C T. III.

St. Dorothy, in the Precinet of St. Catharine.

THIS parih is bounded on the Eaft by St. Catharine; Welt, by Clarendon ; North, by St. John; and South, by Old Harbour and the fea.

The town of Old Harbour contains about thirty houfes, inlabited chiefly by wharfingers and factors; this being the principal barquadier for this parifh, St. John, a part of St. Thomas in the Vale, and a part of Clarendon. It had formerly a fmall fort, or rather battery, which has not been thought of confequence enough to fupport in repair; for the harbour, or bay, lying only about feven leagues Weft from Port Royal, and about ten miles from Spanifh Town, notice might be difpatched to either of thofe places in a very fhort time upon any alarm; and as the fame breeze, which would ferve to carry a fhip of war from Port Royal to their affiftance, would prevent an enemy's veffel from getting out of the bay, no privateer will dare to venture fo far in as to give the town any amnoyance: befides, the entrance into the bay is fortified with fo many cayes and fhoals, as to make the navigation very hazardous to ftrangers; and even thofe beft-acquainted with it require day-light

> B O O K II. C H A P. VII.
day-light and a favourable land-wind to carry them out. The inner or Eaft harbour is an inlet, or cul de fac, turning near fix miles within land, and fo fheltered on all fides, that fhips have rode here with perfect fafety in the mof furious hurricanes. On this account, the Spaniards moored their galleons here during the ftomy feafon; but the channel leading to it is now fo choaked with mud, that loaded thips cannot get in or out; for which reafon, the merchantveffels, which come to take in cargoes at this port, lie further ont is the bay, where veffels of almolt any burthen may have fufficient depth of water and a fine anchoring-ground.

In the offing of the bay is a very good fifhery, chiefly for fnappers, which form a principal part of fubfintence for the inhabitants at Old Harbour. At certain times of the year there is alfo great plenty of turtle caught upon the coaft. A company of foldiers is quartered here in barracks, built at the expence of the parith. As this place contains nothing further of note, I fhall pafs on to the market, which is diftant about two miles inland, and is fo called from the Negroe market; held here regularly every Sunday fore. noon, for poultry, corn, eggs, and other fmall articles of provifion. It is an infignificant hamlet of about twelve houfes, confifting of taverns.and fhops, and diftant about one mile from the parochial church, a fmall building, clofe by which is the rector's houfe, fituated on a rocky eminence, which commands an agreeable profpect of the fea and adjacent country. From the piazza of this houfe the eye takes in a view of great part of St. Catharine and Liguarea, and the fea from St. Thomas in the Eaft to Portland Point in the Weft. But the flat part of St. Catharine, St. Dorothy, and Clarendon, appears to be in a manner a continued wood, from the multitude of opopinax trees which are fuffered to grow in the hedge-rows and middle of the paftures; and this detracts greatly from the beauty of the landfchape. The ftipend annexed to this rectory is 200\%. per annum; and, the parifh not being very populous, the whole income of the living is probably under $400 \%$

The only river in this parifh is the Black or Bridge river, which takes its rife in a fmall morafs about feven miles from the harbour. The excellence of its water has already been mentioned. It crofles the great Weftern road which leads from Spanifh Town to the

## J A M A I C A.

leeward parts of the ifland, over a funken bridge of large timberwork and ftones. It is here but a fmall fream; but it widens on approaching the harbour, and becomes deep enough to admit the thips long-boats which come here for water. Near the mouth of it are caught exceeding fine jew-fifh and calipever, for the Spanifh Town market. The foil adjacent to it is extremely rich; and large tracts are capable of being watered by channels drawn from the river, and cultivated with the fugar-cane; but hitherto no fuch advantage has been made of either. The foil of this parifh in general refembles that of St. Catharine, and lies under the like miffortune of uncertain feafons; for which reafon, it has never made any confiderable figure as a fugar-parifh.

The hilly parts of it towards the North abound in pimentotrees; which thews their foil well-adapted to this production, though it is not extenfively attended to here, for want of inhabitants. The air of the coaft is but indifferent: the interior parts are efteemed more healthy; and particularly the hills, where it is perfectly clear and temperate.

In the mountains near St. John's is an exceedingly fine chalybeatefpring, which has performed many furprifing cures in dropfical habits; and in cafes where, by lingering and ill-managed intermittents, the patient was too relaxed and emaciated, the blood impoverifhed, and the tone of the ftomach much impaired. Some have been known to recover from a droply by the ufe of it, after being feveral times tapped. The eftate in which it rifes having been, a few years ago, fold by Mr. Harris, the former proprietor, the purchafer, either through ignorance, or for fome other reafon, caufed a bank to be dug down, at the foot of which it had ufed to be taken up. It now lies covered by a load of foil and rubbifh feveral feet in depth; fo that the public are at prefent unhappily deprived of this providential remedy. It is much to be lamented, that the many excellent mineral and medicinal waters in this ifland, diftributed here by the benevolent Father of mankind, on purpofe as it were to adminifter an eafy relief under fome of the moft excruciating ailments, fhould have fallen fo little under the public care, that, excepting the bath in St. Thomas, I do not know of one that has been thought worthy of the legiflative attention.

The aftroites, or ftar-ftones and brontix, hedge-hog and echini fones, are found in great abundance on the conf. The firft-mentioned, as well as the coral rocks, which extend from Salt-pond hill to Old Habour, near the fhore, when calcined, make an excellent lime for building.

It feems now to be the eftablifhed opinion, founded upon ana. tomical obfervations, that the black complexion of Negroes proceeds entirely from a reticulum mucofum, or dark-coloured net-work, fpread immediately beneath the cuticle of their bodies. It is likewife prefumed, upon reafonable grounds, that the different cafts of complexion, obfervabie among the different fpecies of men, derive their various tints principally, if not entirely, from the colour of their reticula. The offspring of two Negroe-parents, if born with a white or light-coloured reticulum, is called an Albinoe. A male child of this fipecies was born, a few years fince, at a polinck, in the hills between St. Catharine and this parifh, and is probably ftill living. The complexion of it was a dead, dull white, refembling that of a corpfe; its hair, or rather wool, a light-flaxen colour, ftrong, coarfe, and curling, like that of a Negroe; the features were truly of the Negroe caft; the noftrils wide, and lips thick and prominent; the eyes were a light-grey, large and full, and, when brought into a ftrong light, were in a continual, rolling motion, which gave the child the foolifh look of an idiot. If he fhould attain to manhood, and beget children, the attention of the curious will be excited to remark the colour of his progeny. A nation of thefe Albinoes are faid to inhabit fomewhere in the central parts of Africa; who are weak and of low ftature, and do not mix with the Blacks. They are called Dondos, or Mokiffes, by the natives; and are faid to have fcarcely any fight, except by moon or owl-light, and to be at continual war with the Blacks, who attack them in the day-time, when their fight is at the worf; and they take their revenge in the night, when it is beft. They are likewife faid to be educated in the fcience of prieftraft, or witchcraft, and to fill the chief offices at Loango in all religious affairs and fuperfitious ceremonies. Some of the Negroes in Guiney are of opinion, that, although they have their males and females, like the reft of mankind, they are incapable of procreating, if not of Vol. II.
coition. But this waints proof. Several of the fame fpecies are affirmed to have been feen in other parts of Africa, in Borneo, in India, and New Guiney.

I fhall conclude the account of this parim with a table, as before:

Annual Produce of Sugat.
Negroes. Cattle. Sugar-plantations. | Hogheads. | Other Settlements.
1734, 2298 5341
1740, $\quad 2515 \quad 5468$
1745, 24234540
1758, $3229 \quad 4232$
1761, 3210
1763, $3075 \quad 3^{899}$
1766, $3713 \quad 4236$
1768, 3665 4661 12. | 700 | 56
Taking the lifts of 1768 and 1740 into comparifon, the decreafe of cattle appears to be 807 , although no new fugar-plantations were formed within that time. And this falling-off, I am afraid, muft be referred chiefly to the introduction of foreign cattle, for fupplying the markets and fquadron: this proved a difcouragement to many penn-keepers in the parifh, and occafioned their deferting it; fo that feveral penns, which formerly were capital breedingpenns, are at prefent in wafte.

S E C T. IV.

## St. J O H N.

This parih has for its boundaries, on the North, St. Anne; on the South, St. Dorothy; on the Eaft, St. Thomas in the Vale; and on the Weft, Clarendon. The whole of this parifh is occupied with hills, mountains, and vallies. It is watered with four rivers, of which the Rio Montando, or Mountain river, is the principal; and with the feveral fprings and ramifications which contribute to form them. The foil in general is fertile, even on the highert ridges. It abounds with fine timber; and the

## BOOK II. CHAP. VII.

vales are particulaily prolific ; of thefe the Vale of Luidas, diftant about twenty-one miles N. W. from Spanifh Town, is the beftfettled. Before fugar-works were formed here, it contained only breeding-penns, whofe paftures were fo rich, that the cattle were remarkably fat, and their flefh of an exquifite flavour. Thefe penn-keepers uied to fupply the market of Spanith Town with veal, which Sir Hans Sloane, I think, extols very highly. The climate of this parifh is cool and temperate. Exceeding good butter has been made here by one or two families; and I have feen moft kinds of European garden ftuff, produced in the Vale of Luidas, in as great perfection as any that is brought to Covent-garden-market. The cherry, apple, quince, and peach tree, thrive and bear fruit in this vale; a fure indication of the cool temperature of the climate, and that the furrounding mountains would be found on experiment to produce them in ftill higher perfection. The air of this pariih is confequently very healthful, and has proved entirely agreeable to European conftitutions. But it is far from being well-inhabited, the roads leading from it requiring a great deal of improvement. After croffing the Red Hills, we enter a tolerably cultivated vale at Lloyd's eftate, interfperfed with a few well-built houfes, which, for want of the refidence of their proprietors, are haftening very faft to decay. From this vale we afcend Cudjve Hill; from part of which there is a South-eaft profpect over the Red Hills to Kingfton, and Weftward to Old Harbour and Goat Ifland, with a near view of fuch plantations as lie immediately below. Some miles further inland is Bolt's Hill, which rifes ftill higher; the fides of it are finely cloathed with fugar-canes; and from the fummit the Southern hills appear depreffed, and the eye takes in a boundlefs profpect over the fea, beyond Port-Royal. About the diftance of two miles further North are the barracks, which are built of fone, and command a narrow pais of communication between the North and South fides of the ifland. This poft is capable of being made exceedingly ftrong; and even now a garrifon of fifty men might hold it againft five hundred: but hitherto (as I am informed) no detachment has been cantoned in it. The barracks are no fooner paffed, than we difcover, at the diftance of four or five miles along a vifto between two continued chains of hills,

## J A M A I C A.

at the foot of which runs a broken gully, called Juan de Bolas (or John of the Vale), the delightful valley of Luidas, before-fpokenof, encircled with the lofty mounds of four parifhes, St. John, Clarendon, St. Aune, and St. Thomas in the Vale. Some of thefe highlands near Juan de Bolas are faid to have rich veins of the precious ores; but no expence is fufficient to explore the profound regions in which they lie concealed. The late Sir S—n Cl_me (who was defcended from an ancient family in Warwickfhire, and bore fome of the higheft offices in this inland), among ft other branches of fcience, attained to confiderable knowledge in metallurgy; and, had his fuccefs been at all proportioned to his fkill, might have beflowed his application to a very profitable end: but, unhappily, after an immenfe expence and trouble in fearching for the hidden treafure, he found (too late) that his favourite purfuit had only contributed to the reduction of his fortune. The church, if not lately repaired, is in a ruinous, dilapidated ftate. The rector, however, has a good houfe and fome glebe land. His ftipend is $200 \%$. and the annual value of the living fuppofed not to exceed $320 \%$. per annum.

## State of the Parifh:

|  |  | Annual Produce. |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Negroes. | Cattie. | Sugur-plantations. | 1 Hoyheads. \| | Other Settlements |
| 5242 | 2561 |  |  |  |
| $5^{875}$ | 28.37 |  |  |  |
| 5728 | 22.50 |  |  |  |
| 5888 |  |  |  |  |
| 5455 | 2726 | 2 I | 2200 I | 50 |

The decreafe of Negroes fhews that this parifh is not getting forwards. Let me here remark (once for all) on the great utility of comparing the prefent and paft fate of the parifhes together. It is the true teft by which the legiflature may judge of the ftate of the whole iffand, and where the fymptoms of a decline are manifeft; as in the example of this parifh, which is bleft with every natural advantage of a good air, a fruitful foil, and regular feafons. It may juftly be fufpected, that a retrogradation under thefe very favourable circumftances can happen no otherwife than from fome defect in the policy of internal government; perhaps nothing fo

## BOOK II. CHAP. VII.

much as a want of good roads, and the impoverifhed condition of thofe who have failed in their fettlements, principally from this caufe. But, whatever the caufe may have been, it is the duty of a patriotic legiflature, when convinced of the fact, to fearch for the fource of evil by the moft probable rules of enquiry; and, when they have difcovered it, to apply the beft remedies in their power.

## S E C T. V.

St. Thomas in the Vale.
THIS parifh is bounded towards the North by St. Anne, and St. Mary; towards the South, by St. Catharine; on the Eaft, by St. Andrew; and on the Weft, by St. John. It is watered by the Cobre; the D'Oro; the Rio Magno, formed by the conflux of the Tilboa and Indian rivers; and by feveral fimall rivulets which fall into them. The greater part of this parith is comprized within the vale called Sixteen-mile-walk. This vale is about eleven miles in length by eight in width, and contains between fifty and fixty thoufand fquare acres. It is fituated Southerly, be . neath the main ridge or chain of high mountains which traverfe the ifland from Eaft to Weft. It is alfo inclofed on all other fides with a circumvallation of high hills and mountains. It is neither flat nor fwampy, but diverfified throughout with gentle rifings and flopes. The foil is fertile, for the moft part a red coarfe earth mixed with clay, or a dark mould upon a whitifh marle. It is full of frings aud rivulets, which unite with the larger ftreams; and thefe, meeting together near the chafm or opening betwixt the mountains on the South fide of the vale, augment that noble river the Cobre, which continues its courfe irregularly between rocky mountains and precipices, alternately a catcade on fmooth water, as it happens to be more or lefs impeded, exhibiting for fome miles a very romantic fene till it reaches the plain below. At that part of the vale where it firft fhapes its courle towards Spanifh Town, it enters between two yawning rocky hills, which ap-
pear as if they had been rifted on purpofe to give it a paffage. The vale is almoft daily throughout the year overcalt with a thick fog, which begins to rife flowly on the approach of evening, grows denfer as the night advances, becomes gradual y diffufed into all the contiguous vales or inlets among the furrounding mountains, is heavieft about the dawn of day, and remains fettled until the fun has warmed and agitated the air; then it rifes higher, expanding in the atmofphere; and between the hours of eight and nine in the forenoon it begins to flow away in two principal ftreams, the one Weftward among the mountains on that fide, the other Southward, following the courfe of the river. Early in the morning it is extremely thick; and, if viewed at this time from the fummit of the mountains, it affords the moft lively reprefentation poffible of a large lake, or little fea: the feveral vales and collateral inlets appear to be arms, harbours, bays, and creeks; the elevated fpots, difperfed through it, and covered with trees, buildings, or canepieces, refemble fmall iflands, which here and there uplift their diminutive heads above water, combining into view the moft picturefque and delightful variety. This fog has been remarked as a fingular phænomenon almoft from the firf fettlement of the ifland. I fhall not pretend definitively to explain the phyfical caufes of it; the fubject has puzzled much abler heads : but as every one has a right to offer his conjectures; fo I may be allowed to fubmit mine, without affecting to controul the opinions of others.

The great abundance of rain that falls on the encircling mountains, their prodigious furface and fudden fteep rife from the vale on all fides, may probably occafion a vaft quantity of water to defcend inceffantly, through fubterraneous chafms, into fo low a fituation, as it were into a huge fink. The foil of the vale, which in general (as has been obferved) is a clay, may poffibly obftruct the free emergency of this water to the furface, except in particular places, where, the ftratum being thinner, the refiftance is lefs; or where gravel, fand, or mould of a loofe texture, predominate. Accordingly, we obferve it copioufly watered with feveral fprings and rivulets, which have their fource among the adjacent high lands. But although thefe currents do not burft forth in all parts, yet the fmaller globules of water may gradually be rarefied and evaporate, affifted

BOOK II. CHAP. VII.
affifted by the native warmth of the marle below, and the action of the folar heat above; which emable thofe globules to penetrate the furface in form of vapour. In a vale encompaffed with fuch prodigious mounds, the folar rays muft ftrike with contiderable impreffion, and fupply the earth to a certain depth wich a large flock of heat, which doth not wholly leave it for many hours after fun-fet. The ingenious Dr. Hales remark that fo great a heat as the fun occafions, at two feet depth under the earth's furface, muft needs have ftrong influence in raifing the moifture at: that and greater depths; whereby a continual reek muft always be afcending, during a hot feafon, by night as well as by day ; for the heat at two feet depth is nearly the fame night and day. The impulfe of the fun-beams giving the moiture in the earth a brifk. undulating motion, thefe aqueous particles, when feparated and rarefied by heat, afcend into the atmofphere. In the day-time, the rarefaction of thefe particles is fo great, that they pafs from the earth imperceptibly: after fun-fet, the cool air, rufhing downwards from the mountains, condenfes, and renders them vifible.. In this ftate the fog refts brooding over the vale, for want of heat to raife it higher, or of wind to difpel it; for the land-wind does. not ufually blow here with an impetuofity fufficient to drive it over thefe lofty barriers that hem in the vale: but it is obferved, that ftrong Norths in the winter-months force it vehemently through the opening of the Southern chain, through which the Cobre flows, and difperfe it for feveral miles, even to Spanifh Town, and fometimes beyond it; but, whenever this happens, no fog is to be feen in that quarter of the vale bordering on the Northern range of mountains from which the wind then fets. Another fingularity is, that, on the approach of a rainy day, this fog does not appear the antecedent evening; the reafon of which may be, that fuch evenings being always clofe and fultry, it is probable the rarefaction. continues as well by night as by day, and, the ufual condenfation not taking place, the particles are not rendered obvious to the fight, although perhaps the reek at fuch times is rather more copious than at others. So in the low lands, on the evening preceding rain, the atmofphere feels unufually clofe and moift, the thermometer does not fink after fun-fet, no perceptible vapours are:

## J $A M A 1 C A$.

noticed, and no dew appears on the grafs. The mmaltered fation of the thermometer is alone an evident proof, that the heat of the atmofphere is not diminifhed, and confequently, that the vapours remain uncondenfed.

Fogs are generally fuppofed detrimental to healh; but the fog of Sixteen-mile-walk by no means deferves this imputation. The inhabitants do nof feruple to expofe themfelves to it freely; nor is it known to produce any effects injurious to them. The principal caufe of its inoffonfive quality may be, that it is not mixed with any fulphurenus or noxious exhalations; at leaft, it is without any fenfible finell; which would moft certainly not be the cafe, if it was much impregnated with any fuch effluvia. Its good effects confint in the copious dew which it theds upon the trees and herbage, and which fupports them in the drieft weather in a flourifhing fate. Thofe long drowths therefore, which fometimes happen in this Glland, fo fatal to the eftates in general, affect the plantations in this vale but very little; the fog fupplying, in a great meafure, the want of rains, or at leaft fo far as to fave the canes from perifhing in the manner they do in other parts of the ifland.

The North-weft part of this vale is called The Maggoti, a tract of favannah lying near the foot of Monte Diablo. The name of this favanuah gave rife to a ftory, that, whenever it rains here, the drops which fall upon any perfon's cloaths become maggots in half an hour. This wonderful metamorphofis, reported probably at firft by way of joke to fome credulous inquirer, has with all its abfurdity been fwallowed, and retailed by feveral authors, copying one from the other, and gravely recorded by them among the notabilia of this ifland. Thefe maggots, however, never exifted, except in the brains of the inventor. The name, perhaps, was of Spanifh extraction, compounded of Maga (an enchantrefs), and Oteo (watching on a high place); alluding probably to the pirnnacle of Monte Diablo, over which the thunder-clouds fo frequently break, as, together with its horrid afpect, to make it feem a proper refidence for a witch, under patronage of the Devil, to whom the mountain was dedicated. The road leading from Six-teen-mile-walk to St. Anne croffes this mountain, traverfing the face of it, which is fo fteep, that few travelers venture to de-

## BOOK II. CHAP. VII.

fcend on horfe-back. Some tradition, perhaps, remained concerning the origin of the Magotti, when a fmall houfe of refrefhment was kept on the higheft part of the road, many years ago, known by the fign of Mother Red-cap; which name that part ftill retains.

The cavern at River-head in the North-Weft part of the vale extends near a quarter of a mile under a mountain, or perhaps more, it being impoffible to explore the whole length, on account of the river Cobre, which occupies the inmoft part of it, and, running for a confiderable way, fuddenly thoots through a hole in the rock on one fide, and continues its current under ground for a confiderable diftance from the cave. That this river draws its origin from fome large fream in the mountains, far beyond the cave, feems evident, by its rifing or falling in exact proportion as the rains are heavy or otherwife in the mountains. After very heavy rains, the river is fo fivelled, that, unable to vent itfelf at the hole, the fuperfluous water difembogues through the mouth of the cavern. An ingenious man attempted, a few years fince, by fixing a flood-gate acrofs the hole, to force the current of the river into a regular channel by the mouth of the cavern, and conduct it from thence to turn water-mills on the neighbouring eftates. The undertaking had all the appearance of being practicable, but was laid afide after the death of the projector. Near the foot of the Northern ridge, at no great diftance from the road which leads over Monte Diablo, is a cocoa-nut tree of very fingular growth. About thirty feet or more above the bafe, it divides into two diftinct ftems, which, continuing their afcent for feveral feet, at an angle thus $V$, and at pretty equal elevation above the main ftem or body of the tree, are crowned with tops of beautiful foliage, and nearly of the fame magnitude; but whether both are productive of fruit or not I could not learn. As no other of the like figure has been obferved in the ifland, it may be regarded as a lufus naturce, of a very unufual kind. The pafs which admits a communication between Spanifh Town and this vale ought not here to be unmentioned. After traveling about three miles fiom the town on a pretty level road, we come to a fugar-plantation, formerly called by the Spaniards Los Angelos, and now The Angels. Juft beyond this begins the entrance of the pafs. From hence to Vol. II.

## J A M A I C A.

the opening into Sixteen-mile-walk, for the fpace of four miles and a half, is a continuation of precipice on both fides, divided only by the river, except a fmall elbow at the end of four miles, where a few acres of level ground at the foot of thefe ridges has admitted of a little fugar-work. The road cut into the fide of the mountain falls by an eafy defcent to the bridge, and crofing the river is conducted along the remainder of the way not many feet above the furface of the water: it is therefore fubject to be broken away in many places by the violence of floods; but this inconvenience is fubmitted to from the impracticability there appeared of carrying it higher through fuch immenfe maffes of rock as form impediments the whole way. For a confiderable length, the road is walled up; and, as it is fo liable to damage, not only from inundations of the river, but the falling of large trees, rocks, and earth, from the impending crags and precipices under which it runs, the expence of repairing it is very great, and requires a ftanding body of workmen, who are employed the whole year to keep it in order. The height of the mountains on each fide overfhadowing it morning and afternoon, the paffage is extremely cool and agreeable; every turn of the road prefenting the eye with new appearances of the river, the rocks, and woods; whilft the water, fometimes roaring and foaming in its current, where it is confined to a narrow and rugged channel; at other times gliding fmoothly and filently along, delights the traveler with an alternate variety. At the end of four miles, the mountain called Gibraltar opens to view a vant folid wall of rock of prodigious height, whofe furface, ap. parently perpendicular, is neverthelefs cloathed with trees and thrubs from the bare to the fummit; the tops of one row terminating where the roots of the next row begin, fo as almoft to feem growing one upon the other. After heavy rains a cataract fouts from the pinacle of this ftupendous mafs, rendering it ftill more awful and romantic. The defile continues not far beyond this majeftic object, though not widening till we enter at once the extenfive and beautiful vale of Sixteen-mile-walk. The air of this vale was fufpected formerly of producing the Weft-India colic or belly-ach; but, as that diforder does not feem at prefent to be particularly attached to the fpot, fome other caufe muft have made

## B O O K II. CHAP. VII.

it endemial: perhaps the inhabitants at this time are lefs addiked to drinking new rum, and therefore lefs afflicted with it. The air of this parifh is in general reputed healthy; and the habitations throughout the vale being for the moft part built on rifing ground, they are not fubject to damps. This tract was among the firft fettled with fugar-plantations, and what it produces now of this commodity is of an excellent quality; but the land is thought to be much worn. The truth is, that fome of the plantations here were formed upon a gritty, red, and naturally fterile foil, which, for want of regular manure, and having loft by degrees its fuperficial coat of vegetable mould, became lefs and lefs productive, till the proprietors threw them up as unfit for the fugar-cane. But others, who have purfued a better hufbandry, ftill reap advantage from it in reafonably good crops. The air of the mountains is perfectly fine and healthful. Upon one of them, near the confines of St. Catharine's, is the governor's polinck or provifion ground, which has a fmall but neat villa upon it, and was purchafed by the affembly, as an occafional retreat, during the hot months, for the commander in chief. The foil of thefe mountains is fertile; and they are chiefly appropriated to fupply the eftates in the vale with the different kinds of vegetable provifion, and lime and timber for repairing their works. This parifh contained,

Sugar-works. | Hogheads. | Other Settlements,

It appears from hence to have made little or no progrefs fince the year I740; and the increafed number of cattle, amounting to 969 , are probably the fock brought upon thofe runs, which, after being in canes, have been converted into pafture.

> S E C T. VI.

## CLARENDON

IS one of the largeft, healthieft, and beet-fettled parifhes in the whole ifland. It is bounded on the Eaft by the parifhes of St. Dorothy and St. John ; on the Weft, by St. Elizabeth; on the North, by St. Anne ; and on the South, by Vere, and a part of Old Harbour Bay. It is watered with no lefs than fifteen rivers, befides innumerable rivulets and fprings. The names of thefe rivers are,

| Green River, | Ballard's, | Rock, and |
| :--- | :--- | :--- |
| Thomas, | Pindar's, | Craal; |
| Tick, | Juan de Bolas, |  | whofe feveral ftreams fall into the Minho. There are likewife, The Cave, Milk,

Pedro, Baldwin's, and Croft's, Bower's.
The capital of thefe is the Minho, which takes its fource about twenty-fix miles, in a direet line, from the fea on the South fide, but with its various meanders makes a courfe of fifty and upwards. I do not know if the fhort river fhould be added to the lift. It lies exactly on the boundary which divides this parifh from St. Anne. It is a large body of water, which appears in a hollow, or dell; and, after running with great violence a little way, fuddenly difappears, probably to give birth to another river below ; but its fubterraneous direction has not as yet been difcovered. The Cave, Pedro, and Croft's rivers, are alfo remarkable for hiding themfelves under ground, after a courfe of fome miles above. The river Minho was probably fo called after one of the fame name in Portugal; for it is to be obferved, that the firf fettlers from Europe were a mixture of Spanifh and Portuguefe. It is from this reafon that we find in the illand mountains and rivers named in both thefe languages. But the name was applied with great propriety to this river, as there are many circumftances to induce a belief, that the Spaniards opened and worked a gold mine fomewhere near its banks.

## BOOK II. CHAP. VII.

banks. Of this I fhall hereafter fpeak more particularly under the head of mines, as I am willing to bring the whole on that head into one view, and thall therefore add nothing further upon it for the prefent. It may be imagined, that a diftriet, watered fo plentifully as this is, muft be well calculated for fettlements: but it was not much cultivated in the time of the Spaniards; they poffeffed a few cacao-walks near the Minho, but chiefly reforted hither to hunt the wild hogs, which were always very numerous in it, and are not yet extirpated. The water in general of all the rivers and fprings is tolerably pure and wholefome, except when difturbed by land-floods. The lower part of the parifh towards the bay confifts chiefly of favannah land for about fix miles in length, here and there interfperfed with rocky hills of no great height. The hills rife gradually in height the further we advance into the heart of the parifh ; yet here are few or none fo fteep or barren, as. not to be fit for culture of fome fort or other. The vales between the hills and mountains are in general facious, watered by fome river, and enriched with fine cane-land. The conveniency of having, water-mills, and the firmnefs of the roads in general, has encouraged the inhabitants to carry their fugar-plantations much farther inland than in any other diftrict of the ifland; and there are fome at no lefs diftance than twenty-two miles from the barkadier. Thefe eftates form their carriage into two ftages, fixing the termination of the firft at about midway, where they have convenient paftures and ftore-houfes, for refrefhment of their cattle, and lodgement of their goods. The foil within the mountains is inferior to none, either for the production of canes or provifions; and the woods are full of excellent timber. The rivers abound with the mullet, fo much admired for its delicious flavour. In fhort, the inhabitants have all the means of plenty in their hands from thefe fources, and the regularity of their feafons; and of courfe they are, at leaft the greater part, opulent and flourifhing. The backparts of the parifh, bordering on St. Anne and St. Elizabeth, are the worft-peopled: yet here is a great field of encouragement to invite fettlers; for the remoteft eftates hitherto formed are known to produce fugars of the beft quality. The foil of the high lands is in general either rocky, intermixed with a black fhell-mould, or

## J A M A 1 C A.

a fine vegetable dark mould on a clay. The lower grounds are chiefly clay, intermixed here and there with rich veins of vegetable mould, or the brick mould; the latter moftly abounds near the banks of the rivers, confitting of the fediment they have depofited, or of the finer particles wafhed down from the hills. The plantation called Carvers is one of the moft celebrated for its fertility: it is a fmall dale, furrounded with rocky hills, and fo rich, that it produces almolt invariably three hundred hogtheads of fugar per amum, with fo little labour to the Negroes employed upon it, that they multiply fufficiently to keep up their ftock, without having recourfe to African recruits. Near Juan de Bolas river, about fixteen miles from the coaft, the road continues towards St. Ann's, paffing by eafy traverfes up the fide of a fteep mountain, on the fummit of which we enter a favannah, or plain, of about four miles in length, called Old Woman's Savannah, from an elderly Spanifh lady, who took up her abode here after the ifland was furrendered to the Englifh, and refided here many years in a hut. This favannah is watered with feveral fine frings; and the foil, though apparently not fertile, produces very good fugar. The air is fo pure and delightful, that many fmall fettlements have been formed here; and the inhabitants attain, for the moft part, to a good old age. The late Mr. James Dawkins made choice of this fpot for founding an academy for the inftruction of boys, natives of the ifland; and, had he lived, the project would no doubt have been brought to maturity: but of this plan I fhall hereafter give a further detail. The hamlet, or village of the Crofs, is fituated about fix miles from Old Harbour Bay, on the great roads leading, one to leeward, the other to Old Woman's Savannah. It confifts of about ten houfes, near the parifh-church, which is an handfome brick-building, of four ailes. Hard-by, likewife, ftands the fkeleton of the parfonage-houfe, which at prefent is converted into a cooper's fhop; a metamorphofis that is not at all wonderful; for the inhabitants of this hamlet, being moftly Jews and Mulattoes, afford no very agreeable neighbourhood to a Proteftant divine. The lowlands of this parifh were the firft fettled; but the inhabitants in procefs of time having found the climate of the mountains more cool, the feafons more regular, and the foil more

## BOOK II. CHAP. VII.

fertile, removed to them, and have carried their inprovements to very great perfection. The rector's ftipend is 250 l .; but this being an extenfive and populous parifh, the living is reputed worth $600 \%$ per annum at leaft, and includes about twelve Negroe flaves, who are appropriated to the ufe of the rector for the time being. The chapel is diftant about twelve miles further inland, a fmall but neat building, and furnifhed with a good organ. Divine fervice, for the convenience of the parimioners, is alternately performed here, and at the Crofs Church : the quarter-feffion is generally held at the Chapel; and the election of reprefentatives at the Crofs. The hamlet of the Chapel confifts of only feven or eight fcattered houfes. Here are the parifh-barracks; in which a company of regulars is quartered, and a fmall market is held occafionally by the Negroes of the neighbourhood.

About three miles from the Crofs, the Weftern road paffes the channel of Rio Minho, which hereabouts changes its name to Dry River, becaufe it is fometimes quite dry, and at other times very broad and rapid. Weftward from this paffage, the road continues nearly the fame diftance, till it approaches Lime Savannah, where a branch diverges from it Northwards to the Chapel; but the main road continues on to St. Jago Savannah. In the middle of this open fpace is a gentle rifing, which commands a diftant view of the whole; and here is very properly fituated a ftarting-chair, for feeing the races, which are fometimes held, for the Vere fubfcriptionpurfe. Upon this favannah, which is well-ftocked with cattle of all kinds, are feveral large ponds, befides many fmall frings and rivulets, which never lofe their water, except in times of moft unufual and long-continued drowth. The road which branches off to the Chapel, after leaving the flat country, afcends among rocky hills, till it reaches Tick Savamnah. A great part of this road is. truly romantic; and the whole, from top to bottom, for the extent of two miles, is hung on either fide with the deep gloom of lofty trees, ever verdant, and rifing in wild gradation out of fupendous rocks and chafms. The favannah receives its name from the river Tick, which runs through part of the vale jult below it. On the top of the favannah is a large piece of water, of confiderable depth, the refort of various wild fowl. Not far from hence is the feat of

## J A M A 1 C A.

Mr. F-n, formerly chief-juftice of the infand ; a native, and one whofe talents are fo extraordinary, that it is almoft impoffible for the moft impartial pen to do juftice to them. In this ifland alone, he has attained, by obfervation, reading, converfation, and the natural acumen of his genius, a more comprehenfive and accurate knowledge of places, perfons, and things, in Great-Britain, Europe, and even throughcut the known world, than moft other gentlemen, who have had opportunities of being perfonally acquainted with them, or of obtaining the moft intelligent accounts of them. Though he never trod any other earth but this little fpot Jamaica, yet he is intelligent in the manners, arts, fciences, and people (fo far as have been hitherto difcovered), of the whole terreftrial globe. Nature, it is true, endued him with a retentive memory, and faculties uncommonly fagacious; but fill it is fignally to his merit, that he has improved every advantage which the gave him ; no one has ftudied more, nor better underftands what he has ftudied, than this gentleman, whom with the ftricteft propriety, and without the leaft particle of adulation, I may aver to be worthy of being efteemed among the firft ornaments of this country.

His houfe is delightfully placed upon a fmall rifing, in the centre of a little vale : at no great diftance from it are two craggy rocks, which peep over the fummits of two hills, and refemble the ruins of antique cattles. Immediately below it lies a little garden, filled with orange, cacao, and other trees, for ufe and pleafure. Beyond this are feveral hills, clumps of tufted wood, and natural avenues into the adjacent country.

At about one hundred paces diftance from this manfion is another of more modern and elegant conftruction. It confifts of one very large and fpacious room, upwards of fifty feet in length, about twenty wide, and twelve high. This is entered by a door-way at the North end, under a portico of about twelve or fifteen feet fquare, fupported by columns of the Tufcan order; and at the South end is a gallery, out of which the eye, over-looking a fmall garden, is carried along an avenue between two gently-rifing woods, that have a folemn, filent grandeur. Adjoining to the principal room are fmaller apartments, one of which is a library furnifhed with a collection of the beft authors. The old habitation, though though lefs elevated, neverthelefs commands a richer and more extenfive profpect, comprehending the fineft part of Clarendon, and of the neighbouring parifhes. The beauties of nature that are difplayed here are innumerable. In one place is feen a long, wavy furface, adorned with the lively verdure of canes, interfperfed with wind-mills and other buildings. In another are beheld feveral charming lawns of pafture-land, dotted with cattle and fheep, and watered with rivulets. In a third are Negroe villages, where (far from poverty and difcontent) peace and plenty hold their reign ; a crefted ridge of fertile hills, which feparates this parifh from thofe contiguous on the North and Eaft, diftantly terminates the landfchape.

The produce of this parifh is fhipped for the moft part at Old Harbour Bay; on which there are two principal barquadiers, the one at Old Harbour Town, the other at Bower's River.

In a rocky hill, on the Northern fide of Old Woman's Savannah, is a cavern which runs a great depth under the earth. Upon examination, a few years fince, it was found to contain a great many human bones, which were probably either Indians, or the relicks of fome of the wild or rebellious Negroes, who formerly infefted this part of the country, and made it their place of concealment. Near this favannah is likewife a chalybeate-fpring, which has performed fome cures, but is not much attended to. The hills adjacent to it furnifh evident proofs of their abounding with copper ore, which one day or other may poffibly excite a fricter inveftigation. The hard, fhining pyrites are frequently found in thefe mountains; and magnetic fones have been picked up on this favannah, which feem to indicate the prefence of iron ore. Many of the fprings in this, as well as in St. Anne's and fome other parifhes, are remarkable for their incrufting and petrefactive qualities; forming in fome places a layer or thin cruft; in others, penetrating into wood, and other fubfances, without altering their fhape. I have feen pieces of hard wood metamorphofed, by their procefs, into ftone, fo as to anfwer the purpofe of hones for tharpening knives. In moft of the gullies bordering upon the coaft, are large quantities of agate, chiefly of the flefhcoloured, blood-coloured, and yellow kinds. But there are

$$
\text { VoL. II. } \mathrm{K} \quad \text { others }
$$

others more variegated. Thefe natural productions are fo little enquired after here, that, I believe, they are even unknown to many: yet the pains of collecting thofe moft in efteem might be rewarded by the profit of vending them to Great-Britain. The moft valuable fpecies are the white-veined, the flefh-coloured, the red, the pale-yellow, the dark-brown with black veins, and the green-ifh-brown variegated. A few, which an ingenious gentleman of this ifland brought with him to London, were greatly admired. Ship-loads might be procured here at no other charge than that of gathering them; and by breaking a few, the beft fort might be eafily difcovered. The temperature of the air in this extenfive parifh is various. In the lowlands it is for the moft part warm and dry; and, among the mountains, cool, healthy, and invigorating. Some of the low grounds adjoining the rich banks of the Minho are unwholefome, and were fo reputed by the Spaniards; for, in times of drowth, this river, about ten miles diftance from the coaft, begins firft to bury its waters, leaving the channel dry for a confiderable length; then rifes again; and fo continues finking and emerging alternately until it difembogues. The mud and weeds, thus left to ferment and turn putrid with the heat of the fun, are fuppofed with good reafon to breed very noxious exhalations; and the known unhealthinefs of one or two eftates, which border upon this part of it, cannot otherwife be accounted for The white inhabitants, or rather the proprietors of thefe eftates, might probably be relieved from this annoyance, by removing the dwelling houfes to fome convenient eminence; for it can never be confiftent with health to fleep in a putrid atmofphere. The flourifhing flate of this parifh may be conceived from the following table :

By which it appears that, in the number of Negroes and cattle, it is much improved ; and, by the great quantity of produce, that it is

> BOOK II. CHAP. VII.
in a flourinhing ftate. The large extent of it hitherto unpeopled will alfo fuggeft this obvious remark, that it requires many more fettlers, to bring it to a more ample ftate of culture, and render it ftill more beneficial. Its advantages in point of water are obferveable from the number of its water-mills, there being no fewer than fifty. Befides fugar, ginger, and cacao, the article of coffee is largely cultivated here; and the annual crops of corn are fo great, that none of the parifhes are better flocked with hogs and poultry. Its low lands alfo abound with horfes, cattle, and hreep.

> S E C T. VII.

## Vere, in the Precinct of Clarendon.

THIS parifh, with Clarendon, forms one precinct. It is bounded Eaft and North by Clarendon ; Weft, by St. Elizabeth ; and South, by the fea. The town of Carlifle, fo called in honour of the earl of that name, formerly governor of the ifland, was intended near the mouth of Rio Minho; but it is at prefent only an inconfiderable hamlet, of ten or twelve houfes. This place is remarkable for having been the fcene of action between the French and Englifh in the year 1694, when Monfieur Ducaffe, the governor of Hifpaniola, with a fquadron of three men of war, and twentythree tranfports, having on board 1500 men, invaded the ifland; and, after fome ineffectual attempts at Port Morant, Cow Bay, and Bluefields, where he met with a repulfe, anchored in Carlifle Bay on the 18 th of June. The governor, Sir William Beefton, who had carefully watched their motions, and conjectured their intention of making a defcent on this part of the coaft, immediately ordered thither two troops of horfe, the St. Catharine regiment, and part of the Clarendon and St. Elizabeth regiments of foot-militia. On the 1gth in the morning, the French landed between fourteen and fifteen hundred men, who proceeded to the attack of a breaftwork, which had been haftily thrown up, near the fhore. This was gallantly defended for a confiderable time by two hundred of the militia; who, finding at length that they could not maintain K 2
th:

## J A M A I C A.

the poft, repaffed the river Minho, after killing feveral of the enemy, and the lofs of fome of their own officers. In the mean time the militia, difpatched by the governor, having arrived, advanced againft the French; and, notwithftanding the fatigue of their long march from Spanifh Town, they charged the enemy with fuch fury, as obliged them to retreat. The two following days a few flight fkirmifhes happened; and on the 22d, the French attacked a brick houfe, then occupied by a Mr. Hubbard, which was bravely defended by twenty-five men, who killed and wounded feveral of the French, among whom were fome officers of diftinction. The French retired for a while, threatening to renew the affault; and, in the mean time, a detachment from the Englifh troops, of fifty picked men, was thrown into the houfe, and an ambufcade prepared with the reft. But the enemy, intimidated with theirlofs of men and officers, feeing no probability of being able to effect any further advance into the country, fuddenly retreated to the fhore, re-embarked with the utmof expedition on board their thips, and on the $24^{\text {th }}$, their whole fleet got under fail for Hifpaniola. The whole lofs fuftained by the French in this fhort time, by their different engagements and ficknefs, amounted to near feven hundred men. On the part of the Englifh, one hundred were killed and wounded. Captain Elliot, who had been a prifoner at Petit-Guava, and made his efcape from thence in a fmall canoe, brought the firft intelligence to Sir William Beefton of the intended invafion ; for which he was afterwards recompenfed by king William III. with a gold chain and medal, of one hundred pounds value, and five hundred pounds in money.

The government of Jamaica immediately fet about framing feveral acts for better guarding the coafts; and, among others, one for enabling the inhabitants of Vere to erect a fortification for their defence ; in confequence of which, Carlifle Fort was built the following year. This fortrefs, for want of repair, has been undermined by the fea, and for many years in a ruinous condition, the guns being all difmounted, and fome of them buried in the fand: nor will it probably be reftored to a proper fate for defence till after fome future invafion; the general rule of œconomy, purfued in this ifland, having been to let the preparations for defence always follow,

## BOOK I. CHAP. VII.

follow, inftead of preceding, the attack. The parih-church ftands at the diftance of about two miles and a half from the fort. It is extremely well-finifhed on the infide, has an organ, and a tower. Its ftructure is low, and, being furrounded with large cotton-trees, it cannot well be feen till on a clofe approach. There is a decent rectory near it, with about feven acres of glebe, befides twelve acres more, in another part of the parifh, of very fine land. The ftipend granted by law is $200 \%$. and the whole value of the living about 350 . per annum. About half a mile from the church, on the oppofite fide of the river Minho, is the free-fchool, founded about the year 1741, with fundry private benefactions, and calculated for inftructing the poor children of the parifh in reading, writing, arithmetic, Latin, Greek, and the mathematics, under the management of truftees appointed by an act of affembly. This parifh is watered with five rivers, the Minho, Milk River, Baldwin's, Hilliard's, and Salt River ; two of which, the Milk and Salt Rivers, are navigable by boats for a confiderable way up. Baldwin's and Hilliard's are only fmall branches which fall into the Milk River, which, as well as the Minho, difcharge themfelves into the fea. Long Bay, and the mouth of Milk River, are only anchoring-places for floops: the principal fhipping-places are at Carlifle Bay, and near the mouth of Salt River ; which latter has its fource about a mile from an inlet on the Weft fide of Old Harbour Bay, under the foot of a rocky hill; the faltnefs of its water, from whence it takes its name, feems to indicate, that it paffes through a large bed of that foffil. The entrance into the bay of Old Harbour from Cape Boncato, or Cabarito, on the Eaft, to the Pitch of Portland, Weft, is about twelve miles and a half in the width, and the bay about twelve in depth. It is defended by fix fmall cayes, or little fandy inlands, which are low, and covered with fhrubs. The bafe of thefe iflands feems to be compofed of coral rock; over which the fea has accumulated heaps of fand and broken thells. The reefs, extending from them very far into the bay, render the channels very dangerous to ftrangers. But the anchoring-grounds are very good in the interior parts, and capacions enough for five hundred fail of thips. The largert of thefe cayes is called Pigeon lfland, from the flocks of pigeons, chiefly the bald-pate, which ufed to

## 70

## J A M A I C A.

frequent it formerly. On the Weft part of the bay are, Weft Harbour, Peake Bay, and Salt River; which are all of them commodious for fhipping, and well-covered, either by the Ridge of Portland, or fmall cayes; fo that the water, where the fhips lye to receive their loading, is generally fmooth, and unaffected either by the wind or fea.

The Promontory of Portland is about ten miles in length, and about two in breadth. The whole of it is extremely rocky, and contains only one fmall fpring. Nature has, in fome degree, compenfated for this deficiency, by fupplying in the fhadier parts a great number of little bafons, or refervoirs, formed in the cavities of rocks, and replenifhed with rain-water; which prove of great fervice to run-away Negroes harbouring in the woods. It has only four or five fimall fettlements upon it; and thefe are chiefly fupported by the fale of brafiletto, and fome other valuable trees, that are found here in abundance. During the laft war, a French privateer made a defcent at Carlifle Bay, furprized two gentlemen of the parih, and carried them off to fea. After having detained them for fome time, the crew at length put them afhore at Portland Point, with no other fuftenance than two or three bifcuits and a bottle of brandy. From this Point there is no road acrofs to the main land; fo that they were obliged to keep along fhore, for fear of lofing themfelves in the woods: but the fatigue of clambering over rocks, added to the heat and thirft, was fo extreme, that only one of them furvived this toilfome march, and returned to his family and friends; the other dropped by the way, and perifhed before any affiftance could be given him. Such are too often the barbarous exploits of thefe licenfed rovers; which ferve to aggravate the miferies of war, by committing als of inhumanity, from which no advantage can refult, either to themfelves, or the flate that employs them! The range of hill which forms this promontory is divided, by a fmall morafs near the head of Salt River, from another range, called the Brafiletto Mountain, which extends Northerly into Clarendon. Thefe ridges, confining the parifh on the South-eaft, intercept the regular current of the fea-breeze, and contribute to render the fettlements Weftward of them very hot.

The land on both fides the Minho in this parifh was once famous for the number of indigo works fettled upon it ; all of which are now extinct. It is chiefly cultivated in canes: the almoft-level tract, which continues from the fea to the mountains of Clarendon, about fixteen miles in length, by about fourteen in width in the broadeft part (exclufive of the fugar-works), is chiefly employed in cattle and fheep paftures. The Weftern quarter of the parifh includes a range of high land called Carpenter's Mountains; on the Eaftern fide of which are fome few fettlements, but the greater part remains uninhabited: acrofs one of the higheft pitches, named May-day Hill, runs the Leeward road, by which, after paffing feveral miles of wood, we come to a good tavern, built here for the accommodation of travelers; this being the principal communication on the South fide between the windward and leeward parifhes. The air of thefe mountains is exeeedingly cool and healthy; and their foil in general very fertile; which may be judged from the ftately trees that grace each fide of the road. In fome part of thefe mountains ( $I$ do not vouch for the truth of the ftory) is faid to be a perpendicular chafm, the diameter of whofe mouth is only a few feet, and the depth of it unfathomable. The following fingular phænomenon is reported of it: that, alternately in the face of every twenty-four hours, it emits and inhales a ftrong body of air or vapour ; and that if, at the time of the indraught, a fmall bird, or other light body, fhould be thrown within the vortex, it would be irrefiftibly drawn in, and never more make its appearance above ground. On the South of thefe mountains, the old road to Leeward paffes near the coaft from this parih to Black River in St. Elizabeth; but it has been feldom ufed fince the track was formed acrofs May-day Hill, which is a much fafer and better way.

The low lands of Vere are, for the moft part, hot and parched; but the air is reckoned not unwholefome, except near the moraffes, which border on Peake Bay and Weft Harbour. Vere has long been famous for producing the fineft mutton, turkeys and other poultry, in the ifland; and with thefe it trafficks largely in the towns. It produces valt annual crops of Guiney corn, and pulfe of various kinds, which form the chief part of fubfiftence for the

## J A M A I C A.

Negroes, and fimall fock belonging to it. Near the Milk River is a hot falt-fpring, the waters of which, fome writers have not fcrupled to affirm, will coagulate the white of an egg: but this is extremely fabulous. The fpring, upon examination, was found very pellucid, but felt only milk-warm, and contained feveral little ftriped fifh of a fpecies fimilar to what are obferved in Salt River ; which is an inconteftable proof, that the water is never in a ftate of ebullition. The principles of this water have not as yet been afcertained by any analyfis; but it is pretty evident, that the predominant falt is marine. It has proved very efficacious in cleanfing and healing foul ulcers, and removing cachectic fwellings of the legs and feet, externally applied.
This ifland contains the three different kinds of heights, diftinguifhed in Ireland by the words, Knock, fignifying an infulated hill, or one uncomected with any range; Slieve, a craggy mountain, gradually afcending, and continued in feveral ridges; and Beinn, a pimnacle, or mountain of the firft magnitude, rifing in the midft of a chain of high lands, and ending in a fharp, abrupt precipice. Of the firft fpecies, which fome authors have compared to eggs fet in falt, is the Round Hill in this parifh, formerly called by the Spaniards Pan de Botillo, about nine miles Weft from Carlifle, and two North from the fea. One of the like kind, refembling a fugar-loaf in its thape, ftands near the fhore in St. David's. There are likewife feveral in Clarendon, and other parifhes.

Off the coaft there is a good fifhery; and fome marine animals, extremely curious and remarkable, have been hauled afhore here by the Negroes in their feines. Among the reft, a few years ago, a Sierra Marina, or fea-unicorn, was caught entangled in a net at the mouth of Swift River, and required fix ftout Negroes to drag it out of the water. It meafured, from the point of the fword to the tip of the tail, upwards of fourteen feet, and weighed near fourteen hundred pounds. Seventeen eggs, about the fize of a man's fift, were taken out of the belly; and, foon after it was brought upon the land, it difgorged fix young ones, of two feet length each, one of which, being put into the fea, fwam immediately away. From the liver were extracted about twelve gallons

## BOOK II. GHAP. VII.

of oil; and much more might have been obtained. The fieth was cut up into large pieces, and afforded a delicious repaff to the Negroes that were employed in the capture.

The lower diftrict of this parifh, called Withywood, took its name from its having been formerly overfpread with wood and withes when the Englifh firf fettled upon it, and which grew fo thick, that it was impoffible to walk among them without a cutlafs to clear the way. This is the part, which, on account of its rich foil, was afterwards filled with indigo and fugar-works, the opulence of whofe owners is fpoken of by feveral writers; and though it has been called in queftion by fome, yet it is very certain, that more carriages of pleafure were at one time kept here, than in all the reft of the ifland, Spanifh Town only exceptad. It is, indeed, almof incredible to think what vaft fortunes were made here by cultivation of this fingle commodity. When the act of parliament was paffed with an intent to recover this branch of trade, the very art of making it was loft; ferv or no perfons were then living in this part who were able to give inftructions, and fill fewer left to receive and follow them if any could have been given. The modern fettlers had converted their lands into pafture, or the raifing of cotton and corn; and could not be perfuaded to give up a little certainty for a much greater probable advantage, where the infability of fate-maxims threatened fuch a rifque to the experimentors. The new law, which was merely temporary, inftead of impofing a heavy tax, as the former law had done, allowed a fmall debenture in favour of every pound weight of indigo, the growth and manufacture of the Britih illands imported into England; yet it availed here but very little. None in this parifh attempted to revive the culture of it. Three or four took it up in other parts of the ifland; and probably, if the law had been renewed after its expiration, with fome additional bounty, it might have encouraged many more to try the effects of it.

For cattle and fock of all forts, paticulatly horfes and theep, no parifh in the ifland excels this, either in number or quality. The foil, excopt Main Savannah, which is a gravelly tract, and rather fterile in dry years, is of a fine brick mould, and. were it not for the want of reyular fhowers, it would be one of the moft

Voi. II.
productive fpots in the Weft-Indies. From the fummits and fides of the hills, which almoft furround and overlook it, the appearance of it is inexpreffibly delightful, and refembling much fome of the richert plains of England. The Round Hill before-noticed adds greatly to the elegance of the prorpect; and it is enlivened every where with herds, flocks, fugar-mills, and other pleafing objects.

State of this Parif:
Annual Produce of Sugar.

This parifh appears to be on the decline in the article of cattle, of which it contains fourteen hundred lefs than in the year 1745 ; which has been owing to the laying wafte fome capital breeding penns, and the converfion of others into fugar-plantations.

## S E C T. VIII.

$$
\text { St. } \quad \mathrm{M} \mathrm{~A} \mathrm{R} \mathrm{Y.}
$$

THIS parifh is bounded on the Eaft by St. George; Weft, by St. Anne; South, by St. Thomas in the Vale, and part of St. Andrew ; and North, by that frith of the fea which feparates Cuba from this inand. It is watered with twenty-four rivers, befides fmalles ftreams; the principal of which are the Sambre, the Nuevo, Bagnal's Waters, and Port Maria, Eafternmoft and Wefternmoft. Nearly the whole of this parifh is compofed of hill, mountain, dale, and valley. The coaft differs greatly from that of the South fide, being for the moft part iron-bound, or protecfed againft the fury of the North winds and furges of the fea with a wall of rocks. The foil too is different, being in general a ftiff clay on the higher grounds, and a confiderable depth of rich, black, vegetable mould in the lower. The foil is univerfally fertile; the hills and moun-

## BOOK II. CHAP. VII.

tains cloathed with noble woods, full of the fineft and largeit tim-ber-trees; and every fot adapted to cultivation of almoft every kind, except that the fummits of fome are thought too bleak and chilly for the fugar-cane : this is therefore chiefly confined to the vallies, and warmer flopes of the hills. The water is equal to any in the world for purity and wholefomenefs; and the air is in general extremely healthful, and agreeable to European conftitutions. About Orange River, and fome other parts of this parifh, the quarry-ftones lie in layers, and are dug out in regular fquares, of pretty even thicknefs, fo as to anfwer the mafon's purpofe with very little trouble. They are of a light-brown, and yield to the acid. The chief ports are Anotto Bay, Port Maria, Auracabeffa, Saltgut, and Rio Nuevo; which are good anchoring-places, though no fecurity to fhips in time of a hurricane, as they are all expofed to the North.

Port Maria is famous for having given, as it is fuppofed, an afylum to Columbus, when his thip was near foundering with a leak ; and fomewhere hereabouts authors have placed the town of Melilla, the firft which the Spaniards founded. Rio Nuevo is likewife remarkable for the decifive victory gained there by general D'Oyley over the Spaniards; which confirmed the Englifh in poffeffion of this ifland. The weather in this parifh is extremely wet during great part of the year, and fo cold, that few if any of the houfes are unfurnifhed with a chimney. Its chief productions are fugar and rum, a little indigo, coffee, tobacco, and corn. The land in general from its richnefs bears too luxuriant a cane: I have feen fome here of enormous fize and length; but fuch are unfit for making fugar, and are only ground for the ftill-houfe, The great plenty of water and provifions are extremely favourable to the breeding of hogs, of which there is great abundance; but fheep and poultry do not thrive here fo well, owing to the ranknefs of the pafturage, and moifture of the atmofphere. This parifh, having been frequently difturbed with infurrections of the Negroe flaves belonging to it, has four barracks, at two of which there is ufually a fmall cantonment of foldiers.

Fort Haldane, at Port Maria, ftands on an eminence commanding the entrance of the harbour, and is capable of making a good

## $7^{6}$

 J A M A I C A.defence. The barracks are large enough to receive fixty men. The quarters here have not proved healthy to the troops ; but the reafon, as I have been informed, is, that the men were fed too confantly on falt provifions, which fometimes were of bad quality.
Auracaleffa has a battery, and barracks likewife for fisty men. The other barracks are, one on the Weft fide of Anoto Bay, at a place called Jack's Bay; and one at Baguals, near the Decoy.

The hamlets at Rio Nucvo, Port-Maria, and Saltgut, have from eight to twelve houfes each, inbabited principally by wharfingers, ftore and thop-kcepers. One of the greateft curionties in this parifh is the Decoy, the feat of Sir Charles Price, bait. It is tio tuated on part of the range of mountains which border on St. Thomas in the Vale. The houfe is of wood, but well fiwifhed, and has in front a very fine piece of water, which in winter is commonly frocked with wild-duck and teal. Behind it is a very elegant garden difpofed in walks, which are fhaded with the cocoanut, cabbage, and fand-box trees. The flower and kitchen-garders are filled with the mof beautiful and ufful variety which Europe, or this climate, produces. It is decorated, befides, with fome pretty buildings; of which the principal is an octagonal faloon, richly ornamented on the infide with luftres, and mirrors empanneled. At the termination of another walk is a grand triumphal arch, from which the profpect extends over the fine cultivated vale of B grals quite to the Northfide Sea. Clumps of graceful cab-bage-trees are difperfed in different parts, to enliven the feene ; and thoufands of plantane and other fruit- trees occupy a vaft tract, that environs this agreeable retteat, not many years ago a gloomy wildernefs.

The late Sir Charles [ $n$ ] was extremely attached to this place, and fpent much of his time here, making it the abode of chearfulnefs
[ $n$ ] This gentleman was a native of Jamaica, and endued with uncommon natural talents, which were improved by education, and polifhed by travel in the early part of his life. On his return to this ifland, his opulent fortune only ferred to make his abilities more confpicuous, and nore ufeful to the community. Thefe eventually gave him the lead in public affairs. With an honeft loyalty to his fovereign, which none could furpafs, he poffeffed a truly patriotic attachment for his country; and, though ever ready to affift and facilitate adminiftration, while conducted on the great principle of public good, he was always the fleady, perfevering, and intrepid opponent to illegal and pernicious meafures of governors. If it were at all neceffary to produce teftimonials

## BOOK II. CHAP. VII.

fulnefs and hofpitality: to thefe, the delightful air breathed here, and the amiable qualities of the owner of this paradife, mutually contributed. This, which I may jufly call the temple of focial enjoyments, was conftantly open to the reception of worthy men, whether of the ifland, or ftrangers: and few gentlemen of rank, whether of the army or navy, on fervice here, quitted the ifland without having paffed fome of their time at the Decoy. Among there was the unfortunate Mr . $\mathrm{B}-\mathrm{fc}-\mathrm{n}$, a young officer in the fquadron, of the moft promifing abilities, and liberal accomplifhments; who, being on a vifit in the year 1769, went early one morning to bathe in the canal, and perifhed before affiftance could be given him. This fad accident was inexpreffib'y afflicting to Sir Charles, and left fo ftrong an impreffion upon his mind, that, before his own doceafe, he gave particular directions to inter his body clofe by his friend Mr. B-fe-n. The mountain on which the Decoy is fituated is a great height above the level of the fea, by fome fuppofed at leaft half a mile perpendicular. Upon digging into a marle pit here, was difcovered a vaft quantity of petrifactions, refembling the large conchites or cockles, or rather perhaps the efcallop kind, the edges being denticulated, but the outfide without any vifible remains of furrows, if they ever had any. I examined feveral, but could not perceive the fimalleft veftige of a teftaceous covering. They were perfectly folid maffes, hard as ftone, and compofed of very minute particles cemented together. It would be difficult to prove, that mere inert matter fhould fpontaneoufly affume thefe regular forms, and apt imitations of marine
in juftification of this character, I might refer to the very honourable marks of approbation which were fo defervedly conferred upon him, both by the crown, and the different affemblies in which he prefided, for fo many years, as fpeaker, with an integrity, candour, and dignity, that were almoft unexampled. In private life, his complacency of manners, accomplifhed knowledge of books and men, and delicacy of humour, rendered him the polite, inftructive, and entertaining companion: here he mone the inflexible lover of truth, the firm friend, and the generous patron. Fis mind was amply flored with the treafures of liberal erudition. But theology feemed his favourite fcience; and the Great Author of nature, the chief ohject of his lludy. Though qualified in all refpects to have made a refpeftable figure on a more extenfive theatre, he preferred a refidence in this ifland; which as he enriched and embellifhed by the diffufion of his income, and tatte for improvements, fo he benefited by an inceffint attention to its welfare. Jamaicalolt one of its beis. friends, when he breathed his latt, which happened in June, 1772 , after he had attained to a good old age. I fhall only add, that few men in any country have attracted more general veneration while living, or more general regret when dead.

## J A M A I C A.

fhells. But it is almoft as difficult to difcover, by what means they were brought into a fituation at that height above the fea, and at fuch a diftance from it. Nature is faid to have done nothing in vain; but an original creation of fuch whimfical refemblances could anfiver no wife purpofe. This globe carries every prefumptive evidence of having undergone very extraordinary changes, and particularly by earthquakes; and, as we cannot tell by what imperceptible paffages the water of the ocean may permeate even below the bafe of iflands; fo we cannot pofitively deny, but it may force its way to a very confiderable elevation, in confequence of violent eruptions, which attend thefe commotions of the earth; carrying with it fhells and fand, and perhaps leaving maffes of falt depofited as it recedes, which may afterwards impregnate rivers, as we find in fome parts of the South fide of Jamaica. Doctor Brookes fpeaks rationally on this fubject: "We camot," fays he, " determine os whether there has ever been an univerfal earthquake or not, " which has changed the primitive form of our world. However, " this is certain, that a great many fubfances, which feem to have
" been proper only to the fea, are now found in the bowels of the
" earth; and which have perhaps been petrified by degrees, by the " infinuation of water, falts, and exceeding fmall cryftalline or " ftony particles, proper to fill up their pores, without alteration " of their fhape. To this all the productions which fome have " looked upon as lufus nature, or fports of nature, are evidently "owing. Befides the bones of crocodiles, the fkeletons of fea"s horfes, the entire bodies of petrified fifh, there are almoft every " where found fea-fhells of all kinds, and all forts of the parts of " fea-animals, converted into ftone; fome very wonderful, with " regard to their fituation ; and others, with regard to the oddnefs " of their Chapes." The petrifactions found at the Decoy feem to come neareft in fimilitude to Sir Hans Sloane's Pecten Yamacienfis friis levibus, Vol.II. fol. 256. N ${ }^{\circ}$. which is frequent on the fhores of the ifland.

As the fettlement of this parifh was not entered upon heartily until about the year ${ }^{1} 736$, it may fill be deemed in its infancy, and will no doubt invite new planters by degrees, as its wood-land comes to be cleared; for at prefent not one-fourth of it is brought

## BOOK II. CHAP. VH.

into cultivation. In the South-eaft angle of it is a Negroe town, called Scot's Hall, inhabited by a party of the Maroons, who came in upon terms.

On the road paffing from Guy's Hill to the Decoy is a quarry of black marble, with white veins. The rock appears confiderably above the level of the road in large maffes. It has never yet been worked, as it would probably anfwer little other purpofe in this country, except for making lime, or flabs for dining-apartments. The diftance from the fea renders the carriage difficult and too expenfive at prefent; but in time perhaps, when the roads are more improved, and this part of the ifland more populous, it may anfwer for exportation, either to Europe or North-America.

The State of St. Mary :

This parifh is evidently improving faft. And we may venture to foretell, that the North fide, though labouring under the misfortune of being the laft-fettled, will in time become the moft populous, as it is naturally the healthieft divifion of the ifland. The foil, by reafon of its exceeding richnefs, does not make immediate good returns in fugar ; but the proportion of rum is far greater than on the South fide; and the excellence of the land affures a permanent, and perhaps inexhauftible, fertility.

> S E C T. IX.

St. A N N E
THE parifh of St. Anne is bounded on the Ealt by St. Mary; on the Weft, by St. James; South, by Clarendon and St. Thomas in the Vale; and North, by the fea. It is watered with twelve
rivers, the principal of which are Rio Rueno, St. Anne's GreatRiver, Roaring and White Rivers. Its ports are St. Anne's Bay, Dry Harbour [o], Rio Bueno, Ocho Rios, and Runaway Bay. At the former of thefe was the town of Sevilla Nueva. The bay of St. Anne is defended by a reef of rocks, which ftretches almoft acrofs its entrance, leaving only one fimall channel for the fhips to go in or out. This barrier fo effectually breaks the furge of the fea, that the bafon in which the fhips lie at anchor is at all times perfeetly fmooth: it is likewife fheltered by two points of land, projecing on eaclu fide the bay like the horns of a crefcent. The drift of the waves being towards the Weftward, they form a current over the breakers which are loweft on that fide of the bay. This current fiveeps through the harbour with a direction towards the fhip-channel, which is on the Eaftern fide; whence it happens, that, when the fea-breeze blows, which gives the water this direction, the veffels at anchor here ride with their fterns to the wind.

The harbour is deep, infomuch that the largeft fhips that load here with fugars, lay their broad-fide clofe to the wharf, which is not many feet in length. It is defended by a battery of twelve embrazures; and at a fmall diffance are the barracks, elegantly built, in which a company of regulars are ftationed. The town of St. Anne confifts of about thirty or forty houfes, ftraggling along the beach, and chiefly iuhabited by fhop-keepers. On the Weft fide of the bay is the parifh church, a very handfome building. The harbour has fomewhat the appearance of the letter E capital, placed horizontally thus $\sim \sim$, the coaft projecting into the centre of it, and making a femi-circular fiweep on each fide. Sevilla Nueva was built upon an eafy eminence, rifing from this centre. The fituation is extremely delightful. By the proj ction of the land, it commands a very fine and extenfive view of the country for many miles to the Eaft and Weft, bounded by dittant moun-
[ 0 ] This place has lately commenced a trading port, and fome houfes are erected at it as the exordia of a future town. This will probably fucceed, in confequence of a road now forming from it to Cave River, in Clarendon, the diftance twenty miles, about fourteen of which extend over a woody, uncultivated diltrict. The road, when compleated, will doubtlefs contribute to the fpeedy fettlement of this tract of country, and has the peculiar merit of opening a communication shrough thefe almoft unoccupied parts, without croffing one river.

## BOOK II. CHAP. VII.

tains, and having the bay, buildings, fhipping, and fea in front. From heuce, as well as other elevated fpots on the North fide, fome of the high lands in Cuba, called the Copper Mountains, are frequently difcerned at one hundred miles diftance in the months of October and November, and during fome of the fucceeding months. They appear of an azure caft to the eye, like the Blue Mountains; and the fight of them is efteemed a certain prognoftic of approaching North winds, which ufually fet in about that time of the year. Several rivulets fall into this bay; and clofe adjoining to the fpot where Seville once food is a fine quarry of white free-ftone, which is foft when firft dug up, but hardens after expofure to the air. A place could not have been more happily felected than this by the Spaniards for building a town. Here was plenty of excellent materials for architecture, abundance of good water, a fertile foil in the neighbourhood, the woods filled with the greateft variety of large and valuable timber-trees, the fea and rivers ftored with innumerable filh, a fafe and facious port, and the diftance not remote from their ifland of Cuba. With all thefe advantages of fituation and a fine air they abandoned it, becaufe the Southfide ports were more convenient for the galleons and other tranfient veffels pafing between St. Domingo and Carthagena; and their traffic was chiefly confined to the fupplying thefe vifitors with provifions, and a few other neceffaries.

It is not to be doubted, but that under the genius of Peter Martir, who was abbot of the collegiate church founded here, the public buildings would have rifen with an elegance unufual in the new world. Several fragments of carved work in ftone, fuch as mouldings, feftoons, cherubs, \&cc. are ftill to be feen here, that would be thought no mean ornaments in an European church. The ruins of two edifices, one faid to have been a caftle, the other dedicated to religious ufe (probably the collegiate church), are fill remaining; the walls of which are feveral feet in thicknefs, and compacted with an exceedingly hard cement. It is the property of the lime made from the fhell-marble, fo common in this ifland, to contract with age all the clofenefs and folidity of ftone; and I have feen fome plaifter taken from an old Spanifh tank, or ciftern, which could fcarcely be broken with an hammer. The battery which de-

Vol. II.
fends
fends the port is conftructed with materials taken from thefe venerable fabrics, and ftands in the place of an ecclefiaftical fanctuary. The poffeffion of this city fell to the fhare of captain Heming, an officer in the Oliverian army fent hither; and his pofterity ftill enjoy it.
The cafte and church, being almoft half a mile afunder, may give us fome idea of the intended extent and grandeur of this place; but, the old walls before-mentioned being every day diminifhed, for the fake of the materials which are ufed in repairing the buildings on the eftate, it is probable that in a ferw years more there will be fcarcely any veftige left of this celebrated city. But the ground about the church being fuppofed confecrated, is ftill preferved as a burial place. As for the ruins of the cafte, they are not only leveled to, but confiderably funk below, the prefent furface of the earth. In the year 1764 were dug up two pilafters of about feven feet length, of no particular order, but fomewhat refembling the Ionic. They appeared to have belonged to the portal, or veftibule, of fome large building, as there were alfo feveral concave ftones proper for an arched roof. Upon thefe pilafters were fome rude carvings in alto relievo. Four or five coarfe images were likewife found; one of which refembled a fphynx; another, an alligator; and the reft were creatures of the mafon's fancy. The manfionhoufe on this eftate ftands on the fummit of a rifing lawn, nearly equidiftant from the fea and the mountains; a fituation which makes it both healthy and agreeable. Before the front of it is a battery of eighteen fmall guns en barbette; which is intended as a protection to the eftate, and to the harbour itfelf in war-time againft privateers. The garden on the Eaft fide of the houfe is prettily laid out; and decorated with a ftone-temple, elegantly defigned in the modern talte.
The Spanifh habitations have long ago been demolifhed, and the ground whereon they food converted into cane-fields; but, in turning up the foil for planting, the old rubbifh continually makes its appearance, and contributes to render it lefs fertile. The ruins were more perfect in Sir Hans Sloan's time, who vifited them in 1688, and has left us the following account :

## BOOK H. CHAP. VII.

- The church was not finifhed. It was twenty paces broad, and thirty long. There were two rows of pillars within; and over the place where the altar was intended were fome carvings under the ends of the arches. The houfes and foundations fland for feveral miles along (thefe were probably the houfes of detached fettlements, not of the frects). Captain Heming faid, he fometimes found pavements under nis canes three feet covered with earth, feveral wells, and burial-ftones finely cut. There are the begimnings of a great houfe called a monaftery; but I fuppofe the houfe was defigned for the governor. There were two coats of arms lay by, not fet up; a ducal one; and that of a count; belonging I fuppofe to the family of Columbus, proprietors of the ifland. There had been raifed a tower, part brick, part hewn ftone, as alfo feveral battlements on it ; and other lower buildings unfinifhed. At the church lie feveral arched ftones, to compleat it; which had never been put up, but are lodged among the canes. The rows of pillars within were for the moft part unornamented. It was thought, that in the time of the Spaniards the Europeans had been cut off by the Indians; and fo the church left uncompleated. When the Englifh took the ifland, the ruins of this city were fo overgrown with wood, that they were all turned black. Nay, I faw a mammee, or baftard mammee-tree, growing within the walls of the tower, fo high as that it muft have been a very large gun to kill a bird on the top of it; and the trunks of many of the trees, when felled from this place, to make room for the fu-gar-canes, were fixty feet or more in length. A great many wells are on this ground. The Weft gate of the church was of very fine work, and ftands entire. It is feven feet wide, and as high to the fpring of the arch. Over the door, in the centre, is our Saviour's head, with a crown of thorns, between two angels; on the right fide, a fmall round figure of fome faint, with a knife ftruck into his head; and on the left, a madona, her arm tied in three places after the Spanifh fafhion. Over the gate, and beneath a coat of arms, was this infcription:

## J A M A I C A.

PETRVS, MARTIR.AB. ANGLERIA.ITALVS. CIVIS. MEDIOLANEN. PROTHON. APOS. HVJVS. INSVLE. ABBAS. SENATVS. INDICI. CONSILIARIVS. LIGNEAM. PRIUS, $E D E M, ~ H A N C, ~ B I S . ~ I G N E . ~$ CONSVMPTAM. LATERICIO. ET. QVADRATO. LAPIDE. PRIMVS. A. FVNDAMENTIS. EXTRVXIT $[p]$.

Thefe words are entire, except Mediolanenfis, which I have fupplied (fays Sir Hans), becaufe this Peter Martir, a famous man, wrote himfelf " of Milan." He was author of the Decads, Epiftles, and fome other books; which gave him great reputation in the world."

There is at this time in St. Domingo, as I am credibly informed, a Spanifh lady, of an old family, who takes her title from this place, by the ftile of Countefs de Sevilla Nueva, in Jamaica.

The hamlets at Laughlands and Runaway Bay are too infignificant to merit defcription. At the former a chapel of eafe was erected fome years ago ; but it is at prefent in a ruinous condition, and is only ufed for holding elections for the parih-reprefentatives. Between this and the Bay is Richmond, belonging to Mr. P——k. This eftate is graced with a very elegant manfion, confifting of two ftories. It is furrounded with a fpacious piazza, fupported by columns of the lonic order; at the four angles are pavilions, with Venetian windows correfponding to each other. The only fault belonging to this houfe is in point of fituation ; for it fands upon a dead flat ; but, being confiderably raifed from the foundation, it is dry and healthy. Adjoining is a pleafant lawn, or paddock, fenced with Chinefe railing, fkirted with a gravel-walk, and ornamented with rows of cocoa-trees. The great road to St. James runs pa, rallel to the North front, at the diffance of about two hundred. yards: the paffage from hence to the houfe leads through a pair of handfome gates along a fpacious gravel-walk. Immediately acrofs the road, and oppofite to the fame front, is a large pleafure-garden, geatly laid out in walks, and ftocked with a variety of flowers and flowering-fhrubs; of which the chief are, the Englifh, Spanifh, and Arabian jafmines; balfams, Indian arrow, capficums, funflowers, French marigolds, jalap or four o'clock, coffee-bufhes,

[^6]
## B O OK IL. CHAP. VII.

South-fea rofe, Barbadoes pride, Jerufalem thorn, pomegranate, paffion flower, phyfic nut, and many others. In the centre is a fountain; and in another part a large labyrinth, inclofed principally with the wild olive, and furnifhed with commodious feats. The town of St. Anne carries on fome trade, chiefly for mules and cattle, with the Cuba Spaniards, who run over in one night's time in very finall veffels, and not feldom in open boats. This pedling intercourfe has been productive of a very fignal mifchief, which has chiefly affected thits parifh. The Negroes here, either perceiving the facility of this paffage, or (which is moft probable) inveigled by the flattering affurances of thefe ftrolling Spanifh traders, who for the greater part are a thievifh race, have taken every opportunity to defert in canoes, and withdraw to Cuba, in hopes of obtaining their freedom : fo that feveral hundreds have, within a few years paft, decamped from this and other parts of the North fide, to the great lofs of the planters. Thefe Spaniards, upon many occafions, have lain under fufpicion of not merely inveigling the Blacks with fair fpeeches, but even taking them away by force. This, indeed, has been a very old practice of theirs, and, for want of an authoritative check, is now become fo habitual, that they ufe as little ceremony in fupplying themfelves from Jamaica by there means, as the Portugueze and Hollanders formerly ufed towards the natives of Guiney. In the year 1719, the then governor of Jamaica. fent the captain of a frigate to the alcaldes, or chief officers of Trinidado, a town in Cuba, demanding reftitution of feveral Negroes, piratically taken from the ifland. But the officers returned for anfwer, "that, as to thofe and other fugitives, " they were there as the other fubjects of their lord the king, and, " being brought voluntarily to their holy church, had received "the water of baptifm." The conclufion follows of courfe ; that, being thus adopted into the Roman Catholic faith, in virtue of the mere ceremonial of their baptifm, though without the leaft knowledge of their new religion, or the grounds or nature of their faith, they could not return, to mingle again with heretics, without peril to their immortal fouls. Such is the pretext by which thefe rogues, under the cobweb veil of their religion, detain the property of Britifl fubjects. It will not be difputed but that the induatry
induftry and labour of fo many ufful hands, transferred by this fraudulent mode of conveyance to a forcign flate, are more than a lo's to their owners ; they are a lofs to the whole Britifh community. The governors of Jamaica have not been wanting to lend every affiftance in their power towards recovery of thete fugitive:, or rather ftolen goods, by fending requifitorial letters to the Spauifl commanders ; but with fo little effect, that fome Britifh frigates, which fince the late peace were fent with thefe difpatches to the Havannah and other Spanilh ports, were fhot at from their forts, and ordered to depart without coming to an anchor. Our flag was infulted, but no redrefs given. Expoftulations on this head have been made, as I have heard, to as little purpofe in Europe. The alcald s here, like thofe of America, are equally bigots when the cant of religious fophiftry is required to fanctify bafe actions.

A Negroe, flying from our colony to Cuba, or kidnapped thither, becomes the property of the Spanifh crown, that is, of a Spanifh alcalde. The ftupid, illiterate wretch is prefently admitted into the bofom of holy mother-church, and ftraight becomes a bueno catholico, and a Spanihh fubject. He continues, however, in a flate of fervitude, and earns a weekly fum for his mafter, who murt pay a certain proportion of it into the royal coffers, or give him up to labour on the fortifications, until the confederate gang of Negroes there can make up a purfe for him. He then goes before another of thefe officers, and intimates that he has wherewithal to purchafe his freedom. The owner is fummoned; and, the furn being fixed at a certain moderate rate, his mafter is obliged to take the money, and grant a manumiffion. By this eafy method, thefe deferters foon acquire their freedom, and with very little pains are able, by cultivating tobacco, breeding poultry and hogs, making chip-hats, fegars, and other trifing articles, to earn a comfortable livelihood among fuch a fet of haughty and indolent beings, who fcorn to fully their noble hands with vulgar occupations. Such being the encouragements held out to our Negroes, and the paffige fo eafily made, it is only aftonifhing that the defection is not greater. It may be urged, that our Negroes, having once tafted the fiweets of fo eafy a life, and fraught with the moft pernicious fupertitions [q], would be ufelefs, if not dangerous, if they

[^7]BOOK II. CIIAP. VII.
were reflored again to the ifland. This I ferioufly believe, but it is no argument to juftify the detainers of them; for, furely, if they had principle enough to do what the laws of nations, of juftice, and common honefty, require, they would either re-deliver the perfons of thefe Negroes, or a pecuniary indemnification; they themfelves not beftowing a gratis freedom to thefe poor people, but felling it to them for a valuable confideration, exacted in money, a part of which booty their illuftrious fovereign (or I am mifinformed) difdains not to participate. What are we to think of a fociety of men, who are capable of committing fuch pious frauds under the mafk of pretended righteoufnefs! The very fame pretence might be brought by a highwayman, or pick-pocket, to juftify their malefactions. It is flagrant robbery, a breach of good faith between the two nations, and ought to be anfwered with reprifals to make good the damages fuftained by the plundered parties. The fovereign of Great-Britain holds an intereft in all the Negroes poffefled by his colony-fubjects; for his revenue is very greatly benefited and fupported by the produce of their perfonal labour. The nation at large holds an intereft in them by the number of manufacturers fet to work; by the fhipping and mariners; by the articles neceffary to cloathe, feed, and employ thefe labourers; and by their general confumption of Britifh merchandizes. Hence, in every refpect, this grievance feems to rife into a national concern, and to deferve a powerful national interpofition, that fuch acts of perfidy and injuftice may ceafe for the future. That fome judgement may be formed of the height of infolence to which the Spaniards have carried their pretenfions, I muft not omit to mention that, fo recently as the year 1768 , the affembly of the ifland addreffed his majefty; fetting forth, that numbers of their flaves were actually detained and employed in the fervice of the Catholic king, or his fubjects; and that, application having been made to the governor of St. Jago in Cuba for the delivery of fome of thofe flaves, he declared, "s that although he knew many Negroes were at that "place, who had made their elopement from Jamaica, yet. he " would not deliver them up; having received orders from the " court of Spain, injoining, that all Negroes coming thither from s6. the Britifh iflands, in what manner foever, fhould be employed

## J A M A I C A.

" in his Catholic majefty's fervice, until further infroctions thould " be given concerning them."
There needs no ftronger pronf to fhew, that this thievifh practice, fo repugnant to the good faith that ought to fubfift between two nations in amity, fo deftructive of the Britifh commerce, fo inconfiftent with the rules of honefty, that, if it occurred between two private individuals, the offender would juftly be deemed a felon; there needs, I fay, no fuller evidence, that this difhonourable policy is countenanced, avowed, and defended, by the Spanith government. It is plain, that his Catholic majeety's inftructions are directly leveled againft all the Britifh colonies: no mention is made of any other; and probably none other are included in them. We may likewife obferve the latitude of the words: "coming in what " manner foever;" under the implication of which are certainly meant, not only thofe who voluntarily defert or run away, but all others who are either trepanned, or violently brought away, by his own Spanifh fubjects: and thefe Negroes are to be employed immediately in the king's fervice. Whence it is plain, that every Spaniard muft efteem this as an encouragement to him ; nay, he muft think he performs his duty to his fovereign, as a zealous fubject ought to do, in taking all opportunities, that happen within his power, to inveigle and fteal away Negroes from the Britifh plauters, for the benefit of his monarch's fervice. Unhappily, Jamaica lies more convenient in its fituation, than any other, for favouring thefe depredations. One would think, that fo peremptory an avowal of what is apparently unjuntifiable in itfelf would be fufficient to alarm a Britifh miniftry, and lead them at leaft to reflect, that the emigration of all the Negroes from Jamaica to Cuba is at leaft pofible; more efpecially, as the Spauiards boldly affert their intentions to get poffeffion of them by all poffible ways and means; and that, after they have feduced, or ftolen away, thefe Negroes, or only the major part of them, they will have much lefs diffictilty in gaining poffeffion of the ifland itfelf; which is an object that, we have juft apprehenfion for believing, they have all along held in view. If, indeed, they fhould be fucceffful enough in difpeopling it of the Negroes, we need not hefitate to let them take the land into the bargain. I have heard the number of them purloined from
the ifland, or that have eloped and been detained in a few years paff, computed at eight hundred; the value of which, that is, the actual lofs to their owners, at the loweft calculation, cannot be rated at lefs than $40,000 \%$. Jamaica money. Had they taken a loaded flip from us of half that value, the whole body of merchants would have rung the alarm, and the clamours of the nation would have fpeedily reached the cabinet at Madrid. Why the injury done to our planters has been lefs held in eftimation, why no redrefs has been obtained for them, for their paft loffes, nor fecurity againft the future, notwithftanding this affair has been ffrenuoufly reprefented, I am unable to difcover. Our Britifh courts of juftice, adopting the principle of Gronovius, inform us, that a Negroe, coming from one of our own colonies into Great-Britain, in what manner foever, becomes inftantly difcharged from the fervice of his owner. Perhaps a Spanifh Gronovius has been found, to affert the propriety of this kidnapping by the like rule of, "Servus pere" grinus, fimul atque terram Hijpanicam tetigerit, codem momento " liber fiat;" under this referve, however, that he is free only quoad his Britifh owner, but not fo quoad the king of Jerufalem [r].

But, to have done with a fubject on which perhaps I may be thought to have faid too much, I return to the parifh of St. Anne. From White River to Rio Bueno, its Eaftern and Weftern boundaries, there is a continued pretty level ground, for about twentyfour miles in length, along the coaft, extending in breadth in few places more than one mile to the foot of the hills, which rife gra-
[ $r$ ] It is probable, that the ecclefiaftics derive fome pecuniary bencfit from this practice, as it conforms to fome of the Romith doctrines; agreeably to the true fpirit of which, that canon was injoined by the pope to the bifhop of Worceiter, in the year 1497 , viz. "that a man fhould be "p permitted to retain the property of another perfon, by what method foever he had feized or ac" quired it, provided he gave a certain portion thereof to the pope's commiffaries, or fubftitutes." Irenæus was the firf who broached this infamous tenet, in his argument to juftify the Ifraelites for having rubbed the Egyptians of their plate and jewels. The ftale pretext of the Spaniards, founded on their zeal in the caufe of holy mother-church, and the tenor of the royal cedula, feem to correfpond exactly with the fame abominable principle, and encourage the Negroes of our ithands to rob their mafters, and defert to them; who maintain, that, if a fhare of the punder be but given to their church, the converfion from paganifm to their faith is fufficient of itfelf to exsenuate all preceding crimes. Such pofitions are fuitable only to a community of thieves, or to the deluded votaries of fuch a religion. They may apply to themfelves and their difciples, with great propriety, the words of a French gentleman, mentioned by Lord Orrery : Pour vous dire la verité, nous fommes tous des bon, catholiques; mais pour la religion, nous n'en avons point. "To fay the truth, "we are all good catholics; but, as for religion, we have none."

Vol. II.
N
dually

## J A M A I C A.

dually to very high mountains. This tract between the hills and the coaft is, for the moft part, a fhallow fratum of mould upon a white, hot marle. Here are the fugar-plantations, which with good management bear moderate crops ; but the canes in general are thort-jointed, and, this part of the parifh being fubject to drowths (the high lands behind drawing off the rain), are often ftunted in their growth; for the foil in which they are planted is naturally fo dry and warm, as to require plentiful and frequent irrigations. Moft of the rivers here take their fource fo high, that their water might eafily be difperfed in channels through the canepieces. Some of the proprietors, I am informed, have lately had this in contemplation; and it would doubtlefs anfwer perfectly well. The hills contain but very few fugar-works. The mould here is extremely fuperficial; and underneath lies a deep vein of a white marle, or hard chalk. The pimento loves this kind of foil; and vaft woods of it overfpread the hills to a great diftance from the coaft. Behind this range of hills and mountains the land is diverfified with open, level favannahs, environed by rocky eminences, or with little cock-pits. The foil of the latter is cultivated fuccefffully with Guiney grafs. The favannahs are covered with fern, and applied to no ufe. There are three principal moun-tain-roads which enter this parifh from the South fide. The road by Monte Diablo, in Sixteen-mile-walk, leads into it on the SouthEaft part, and is a mere avenue cut through the woods, there not being more than four or five fettlements on the whole road. About five miles from Monte Diablo is the Rio Hoja, which, running about a mile and half from its firf fpring, difcharges itfelf into a large lake of immenfe depth. Some have affigned this as the fource of the Cobre; which is not improbable, as the riverhead and this body of water lie in exact meridian, North and South. The next road penetrates the centre of the pariih, by way of Old Woman's Savannah, in Clarendon, through the fettlements of Pedro, of which I have before given an account ; and their number fcattered on each fide renders this by far the pleafanteft way. After leaving thefe fettlements about two miles, we come to a ftupendous hill of folid rock, perfectly bare, and unadorned with either plants or herbage. From this ftupendous mafs, to the neareft fet-

## BOOK II. CHAP. VII.

tlement on the North fide of the parifh, is about two miles further. The third road enters the Weft quarter of the parifh, by way of Clarendon. After running about five miles before it reaches any fettlement, it branches into two forks; one of which pafles on to Runsway Bay; the other, to Dry Harbour. From the entrance, by Clarendon, to the range of hills near the coaft of St. Anne, is about twelve miles; the road is enlivened with a very few human habitations, and thofe fcattered. This tract, from its being fo little inhabited, was called Siberia : yet it is not in other refpects deferving that appellation; for it is full of excellent timber, and furnifhes a vaft quantity of mahogany every year, the vifitors of this part being chiefly cutters. The diftrict of the parifh, interfected by thete three avenues, comprehends near one hundred and eighty thoufand acres, as yet unfettled. In fo vaft a fpace there mult needs be a very great variety of foil, and numberlefs fpots of very fine cultivable land. But, exclufive of a few fern favannahs, the whole of it is in its primitive foreft, full of large cedar, mahogany, and other valuable timber-trees. The foil, over which the roads pafs, is in general a reddifh fat clay, intermixed with mould, or a black-fhell mould; and, fo far as fettlements are formed, it is experienced to be exceedingly fertile, being refrefhed with conftant dews and frequent fhowers. The rain does not defcend here in fuch violent ftreams as in the low country, but for the moft part in a fine fpray or drizzle; and the air is, during the whole year, cool, temperate, and perfectly healthful. Here then appears a defireable field for introducing new colonies of induftrious people; as a leading meafure to which, fome new roads are required, to penetrate through this defart tract, and open a communication with the parts already fettled. The air of the coaft is hot, and in general tolerably healthful.

Near Ocho Rios, or, as it is now more commonly called, Chereiras Bay, in this parifh, the road from St. Mary paffes through Walter's plantation to the Weftward, up a fteep hill. This road, having been gullied very much about eleven years ago, by a heavy fall of rain in October, the fkeleton of an Indian was laid bare to view, about five feet below the furface. The foil here is a white coarfe marle, which certainly did not poflefs the corrofive qualities
of lime in its compofition; for the bones were perfectly found and firm. The fkull appeared preternaturally compreffed at top, which mide the finciput very low. There was fome appearance of a cut on the occipital bone, as if made with a fharp weapon. By the fize of the bones, they were conjectured to have belonged to a man of large ftature. At the head and feet lay two unglazed earthen pots, fhaped fomewhat like a canoe, and well wrought; one of them was broken in taking it out; but the other was preferved intire, and found to contain a fmall quantity of black earth, refembling foot. The body had probably been interred not lefs than two hundred years.

This parifh contains two remarkable cafcades. The leffer is formed by a branch of Rio Alto, which is fuppofed to re-emerge (after a fubterraneous current of feveral miles) between Roaring River Plantation and Menzie's Bog. The hills in this part are many of them compofed of a ftalactite matter; by whofe eafy foIution, the waters, oozing through the rocks, are copioufly charged with it, fo that they incruftate all bodies depofited in them. This river rifes at a confiderable elevation above the fea's level, and at a great diffance from the coaft, and continues its courfe between the hills fucceffively broad or contrated, as they on each fide approach nearer; or recede further from, one another. In one of the more exteaded faces, it expands its water in a gentie defcent among a very curious group of anchovy pear-trees, whofe fpreading roots intercept the fhallow fream in a multitude of different directions. The water, thus retarded, depofits its groffer contents, which in lengrh of time have formed various incruftations, around as many cifterns, fpread in beautiful ranks, gradually riffing one above another, and bearing no ill refemblance to a magnificent flight of fteps in ruftic work, leading up to the enchanted palace of fome puiflant giant of romance. A theet of water, tranfparent as cryftal, conforming to the bend of the fteps, overfpreads their furface; and, as the rays of light, or fun-hhine, play between the waving branches of the trees, it defcends glittering: with a thoufand variegated tints. The incruftation in many parts is folid enough to bear the weight of a man; in others it is fo thin, that fome perfons, whofe curiofity led them to venture too far, have fuddenly found themfelves plunged up to the middle in a cold refer-

## B O OK II. C H A P. VII.

voir. Thefe accidents give it fill more the appearance of a Fairy. region. The cifterns, or refervoirs, have their fides formed by broken boughs and limbs, incrufted over, and fuftained by the trunks of trees, promifcuoufly growing between them. The cifterns themfelves are always brim-full of water, which trickles from one to the other; and, although feveral of them are fix or feven feet deep, one may clearly difcern whatever lies at the bottom. The lamina which envelope them are in general near half an inch in thicknefs. To a fuperficial obferver their fides have the aple ance of ftone; but, upon breaking any of them, there appears either a bough between the two incrufting coats, or a vacant fpace, which a bough has once filled, and by the mouldering of which in length of time a cavity has been left.
On opening feveral of thefe incruftations, not only boughs were found, but entire leaves of a muddy-green hue. Whence it may be conjectured, that a fhell, fomewhat thicker than that of an egg, may be concreted by this water in lefs than a twelvemonth.

The incrutting matter is foluble in the vinous acid, and when diffolved aequires a deep-black colour, much fimilar to what the vegetable aftringents frike with a chalybeate.
As the remarkable quality, refident in this water, feems not confined in its. effects to any particular fubftance, it might be no unpleafant experiment to immerfe the fuffed ikin of any animal for a fufficient time in it ; fince it is probable, that the workmanfhip of nature would furpafs the happieft productions of the chiffel, and furnifh the moft animated and durable reprefentations by this eafy and unexpenfive method.

After dancing over thefe imnumerable cifterns, the pellucid elcment forms itfelf into one or two freams; which afterwards, collecting other neighbouring rivulets, compofe feveral leffer, moft beautiful; falls. But defcription fails in attempting to convey any competent idea of its feveral beauties.

The other, or great cafcade, more properly a cataract, is formed by the White River, which is of confiderable magnitude, and, after a courfe of about twelve miles among the mountains, precipitates in a fall of about three hundred feet or more, obliquely meafured, with fuch a hoarfe and thundering noife, as to be heard
at a great diftance. Viewed from below, the Ajutage [ $s$ ] appears to be a body of water, of fmall bulk, iffuing between a tuft of wood; but, as it continues its defcent, the breadth gradually increares, until it reaches the bottom, where it forms a beautiful circular bafon, and then flows away in a ferpentine courfe towards the fea. Through the whole defcent it is broken and interrupted by a regular climax of fteps, of a falactic matter, incrufted over a kind of foft chalky ftone, which yields eafily to the chiffiel. So vaft a difcharge of water, thus wildly agitated by the fteepuefs of the fall, dafhing and foaming from ftep to ftep, with all the impetuofity and rage peculiar to this element, exhibits an aweful, pleafing fcene. But the grandeur of it is aftonifhingly heightened by the frefh fupplies which it receives after the rainy-feafons. At fuch times, the roaring of the flood, reverberated from the adjacent rocks, trees, and hills; the tumultuous violence of the torrent, tumbling headlong with refiftlefs fury; and the gloom of the over-hanging wood, contrafted with the foft ferenity of the $1 k y$, the filvery glitter of the fpray, the flight of birds fkimming over the lofty fummit of the mountain, and the placid furface of the bafon below; form, all together, an affemblage of fubjects, the moft happily mingled, and beyond the power of painting to exprefs.
" Wide o'er the brim, with many a torrent fiwell'd,
" And the mix'd ruin of its banks o'er-fpread;
" At laft the rous'd-up river pours along,
" Refiftlefs! roaring! dreadful!-Down it comes
" From the rude mountain, and the moffy wild,
" Tumbling through rocks abrupt, and founding far:-
" Then o'er the fanded valley floating fpreads,
" Calm; fluggifh; filent;-till again, conftrain'd
" Between two meeting crags, it burfts away,
" Where rocks and woods o'er-hang the turbid fream.
" There gathering triple force, rapid and deep,
" It boils! and wheels! and foams! and thunders through!"
Thompson.
A beautiful intermixture of tall and ftately trees rifes gracefully from the margin on either fide; whofe bark and foliage are diverfi-

## BOOK II. CHAP. VII.

fied with a variety of the lovelieft tints. And, to complete the pisture, the bafon is ornamented with two elegant trees of the palm kind, which fpring like ftrait columns out of the water, placed by the hand of nature at fuch even diftance from the banks on each fide, that art could not have done the work with more attention to propriety and exactnefs. The whole, indeed, has been executed by nature in a tafte that furpaffes either defcription or imitation. The late Sir Charles P -e, within whofe territory it lay, would not fuffer the leaft alterations to be made to it, although fome of the fteps might eafily be cut fo as to be rectilineal. He preferred its natural beauties; and, in order to enjoy them, formed a club of gentlemen, and built a range of apartments on a pretty lawn juft fronting the cafcade. Here they had an annual meeting, which continued fome weeks; during which, they took the diverfion of fhooting the ring-tail pidgeons, which in this part of the country are very numerous, and in great perfection at the proper feafon. If the leffer cafcade is delicate and curious, this is grand and fublime. The former is contemplated with delight, and this with a pleafing and reverential wonder. The fall is faid to exceed in grandeur that of Tivoli, or any other in Europe, though much inferior to that of Niagara.
The grotto in this parifh, near Dry Harbour, and about fourteen miles Weft from St. Anne's Bay, is fituated at the foot of a rocky hill, under which it runs for a confiderable way, and then branches into feveral adits, fome of which penetrate fo far, that no perfon has yet ventured to difcover their ending. The front is extremely Gothic in its appearance. It is the perpendicular face of a rock, having two arched entrances about twenty feet afunder, which look as if they had anciently been door-ways, but funk by time or accident to within two or three feet of their lintels. In. the centre of the rock, between thefe portals, is a natural niche, about four feet in height, and as many from the ground, which might well be fuppofed intended for the reception of a madona, efpecially as at the foot of it is a fmall excavation, or bafon, projected a little beyond the face of the rock; which feems a very proper refervoir for holy water. Excited by the accounts I had heard of this celebrated curiofity, I made one among a party to vifit it.

## J A M A I C A.

After providing ourfelves with feveral bundles of candlewood, fplit in fmall pieces, we crept on our hands and knees under the larger of the two apertures in the front of the rock, and immediately found ourfelves in a circular veftibule, of about eighteen feet diameter, and fourteen in height. The cieling (an irregular concave), as well as the fides, was covered with falactic and fparry matter, interfperfed with innumerable gliftening particles, which, reflecting the light of our torches from their polifhed furface, exhibited the moft rich and fplendid appearance imaginable.

This roof feemed to be fupported by feveral columns of the fame matter, concreted by length of time; whofe chaptrels, and the angular arches above, appeared in the true Gothic taite. The pillars furrounded the veftibule; the open fpaces between them led into avenues which diverged away into different parts of this fubterraneous labyrinth. On one fide we obferved a rock, which, by the continual dripping of water upon it from the cieling, was covered with an incruftation, and bore a very ftriking refemblance of fome venerable old hermit, fitting in profound meditation, wrapped in a flowing robe, his arms folded, and a beard defcending to his waift. The head appeared bald, and the forehead wrinkled with age. Nothing was wanted to complete the figure, except the addition of features, which we immediately fupplied, in the theatric manner, with a piece of charcoal. The graceful, eafy folds and plaits of the drapery, and the wavy flow of the beard, were remarkably well expreffed. Roubilliac, the rival of nature, could not have executed them in a more finifhed and mafterly ftyle. After we had fufficiently contemplated this reverend perfonage, we purfued our route through one of the largeft adits. We found the paffage every where of good height, in general from twelve to fifteen feet; but fo totally excluded from day-light, that the gloom, together with the hollow found of our trampling, and difmal echo of our voices, recalled to our minds the well-imagined defcription of Æeneas's defcent into the infernal regions. And this idea fo ftrongly poffeffed us, that, in the enthufiafim of poetic delufion, we expected no lefs, at every turn, than to pop upon Cerberus, or fome other horrid inhabitant of Pluto's dominion:

Spelunca alta fuit, vagfoquc inmanis biatu, Scrupea, tuta lacu nigro, nemorumque tenebris.
Ibant obfouri folâ fub nocte per umbrann, Perque domos ditis vacuas, et inania regna. Quale per incertann lunam fub luce malignd Eft iter in fylvis; ubi celum condidit umbra Fupiter, et rebus nox abfulit atra colorem.
" Deep, deep, the cavern lies, devoid of light,
" All rough with rocks, and horrible to fight.
" Its dreadful mouth is fenc'd with fable floods,
"And the brown horrors of furrounding woods.
" Now through the difmal gloom they pafs, and tread
" Grim Pluto's courts, the regions of the dead ;
" As puzzled travelers bewilder'd move
" (The moon fcarce glimm'ring through the dufky grove),
" When Jove from mortal eyes has fratch'd the light,
" And wrapp'd the world in undiftinguifh'd night,"

## Pitt.

That the comparifon might have appeared more juft, I ought to have premifed, that the grotto is furrounded with a thick wood, and that at a fmall diffance before the entrance is a large lagoon of ftagnant water. The critic perhaps may object, that we were not fo entirely in the dark as Æeneas is reprefented. But, if he pleafes, he may allow the dim light of our torch to bear fome fimilitude to the glimmering of the moon above-mentioned; and then it will feem more aptly applied. The foil beneath our feet we perceived was deep, foft, and yielding, and had a faint, cadaverous fmell. Upon examination, we imagined it to be a congeries of bat's dung, accumulating perhaps for ages paft ; and were further confirmed in this opinion by the multitude of thefe creatures, which, upon the difturbances of our torch-light, and the unufual noife of fo many vifitors, flitted in numerous fwarms over our heads. - It is probable this foil is ftrongly impreguated with nitre; but we had not time to fearch for it. After walking a confiderable way, we obferved many new adits branching from the fides. Our guide informed us they led feveral miles under ground; and that

Vot. II.
O one
one half of them had never been explored by any human being. Soon after, we came all on a fudden to a little precipice, of about four or five feet; and fome of the party would have hurt themfelves very feverely, if it had not been for the foft Aratum of bat's dung which lay below ready to receive them. Our guide, and two or three of the foremoft, difappeared in an inftant, having tumbled one over the other ; but foon recovered from their furprize, when they found themfelves unhurt. The reft, who followed at fome little diftance, being put on their guard, defended with fomewhat lefs rapidity. We continued our walk without further interruption, till we hailed the day-light again, in an open area environed on all fides with fteep rocks covered with trees. This area, as nearly as we could conjecture, lies about a quarter of a mile from the entrance of the grotto. We remarked feveral adits leading from different parts of this little court; but our guide was acquainted with one of them only, into which we walked, and came into a magnificent apartment, or rotunda, of about twenty-five feet diameter, and about eighteen to the dome, or vaulted cieling; from the centre of which defcended a ftrait tap-root of fome tree above, about the fize of a cable, and pretty uniform in fhape from top to bottom. This had made its way through a cleft in the rock, and penetrated downward quite into the floor of the apartment. On one fide was a fimall chafm, opening like the door-way of a clofet into a narrow paffage; which our guide endeavoured to diffuade us from entering, on account of a deep well, which he informed us lay a few paces within. However, we ventured in a little way with great caution, and found his account very true. The paffage grew more and more contracted, till we met with a thin, upright ledge of rock, rifing like a parapet-wall, almoft breaft-high, which feemed to decline gradually lower as we advanced. We therefore thought it prudent to halt, and foon difcovered the ledge of rock feparated us from a vaft cavernous hollow, or well. Having no line, we could not found the depth of the water, nor how far it lay beneath us; but, by the fall of fome fones we threw in, we judged the difance to the water about thirty or forty feet. The ftones in their fall produced a moft horrid, hoarfe noife, as loud as hell's porter uttered from his triple jaws,

## BOOK II. CHAP. VII.

primis in forcibus orci. Our guide informed us it was unfathomable, and communicated with the fea. The latter is probable, as the entrance of the grotto is very near the coaft. We returned acrofs the area by the way that we came, only peeping into a few of the other avenues as we proceeded, which we found very little different. They had the like rude cielings incrufted with ftalactites, here and there interfperfed with the radical fibres of trees and plants, and their walks ftrewed with various feeds and fruits, particularly the bread-nut in great abundance; and even fome reptiles, all cus. rioufly covered over with incruftations, but fill preferving their original fhapes. The ftructure and furniture of thefe various cloyfters and apartments, at the fame time that they excite the utmoft curiofity, baffle all defcription. In fome we faw, or fancied we faw, fparkling icicles, and beautiftully-variegated foliage, gemmy canopies, feftoons, thrones, roftrums, bufts, fkulls, pillars, pilafters, bafons, and a thoufand other femblances of fuch objects as ftruck our different imaginations. Moft of the arches and columns feemed to be compofed internally of a greyifh, fonorous marble, and were extravagantly wild and curious. Some are perfect, and fuftain the mafly fuperftructure; others half formed; and fome in their very infant ftate. Several of the apartments are cellular; others, fpacious and airy, having here and there an eye-let-hole to the world above. Thefe aërial communications are of fignal fervice; for, although not in general large enough to admit much light, yet they introduce fufficient frefh air to expel noxious vapours, and afford a convenient refpiration, except in thofe parts which are moft reclufe. The exterior fummit of the cave is a greyifh rack, honey-combed all over, full of crannies, and thickfet with various fpecies of trees, whofe roots having penetrated wherefoever they could find an opening, they flourifh without any vifible foil, an appearance which is extremely common in this ifland. We were anxious to invertigate further: but, upon examining our ftock of torch-wood, we found fcarcely fufficient left for conducting us back to the entrance, and we were obliged to ufe difpatch in regaining it, for fear of rambling into fome one of the numerous paffages opening to the right and left, where, puzzled with mazes and perplexed with errors, we might have rambled Vol. II.

## J A M A I C A.

on without the probability of ever finding our way out again: and in fuch a diftreffful event we could not reafonably have expected any human affiftance. The famous Cretan labyrinth did not, 1 am perfuaded, contain half the turns and windings which branch througl every part of this infernal wildernefs; and which even Thereus, with the help of his clue, would have found difficult to unravel. Whoever may have the curiofity to examine thefe meanders with more attention, and to difcover their extent and termination, ought to furnifh himfelf with the implements neceffary for friking fire, a portable mariner's compafs, a proper quantity of wax tapers, and fome provifion for the ftomach. Thus equipped, he may pervade them without fear of being loft, if he walks with due circumfecation: the impreffion of his feet on the foft mould, which is thick-ftrewed in thefe paffages, might enable him to re-trace his own tract almoft without the affiftance of a compars ; though to avoid the poffibility of being bewildered, it will be advifeable to carry one.

Thefe are the moft remarkable curiofities as yet difcovered in this parifh; but it may probably contain others, the grotto not having been found out, or at leaft generally known, till within thefe few years. We are uncertain whether it was known to the Spaniards; but it is fuppofed that run-away Negroes were not unacquainted with fo convenient a hiding-place.

Moft of the houfes in this parifh are made defenfible with loopholes; it having been the practice formerly, in war-time, for the enemy's privateers to land here, in order to plunder the inhabitants of their Negroes. Thus, in guarding againft the infults of foreign enemies, they are fortified alfo againtt internal ones; the like precaution ought to have been ufed, in the other parts of the country, which are remote from the coaft ; but, either through negligence, or an imprudent contempt of danger, very few houfes upon the inland fettlements have been conftructed in this manner.

The road which paffes along the coaft to St. James, is one of the beft in the ifland, and kept in good repair.

This parifh has increafed, as appears from the table, upwards of three thoufand in Negroes, and in cattle near four thoufand, from 1745 to 1763 , or in twenty-three years. This is to be afcribed almoft entirely to the fettlements formed in Pedro's Cockpits: and a better proof cannot be required, to fhew the vaft benefits arifing to the ifland from a more extenfive colonization of its interior waftes; nor a ftronger reafon given for an immediate and vigorous encouragement of fuch a plan.

To recapitulate fome of the preceding matters, and bring them into one view, I thall clofe my detail of this county with the following particulars :

> County-town of Middlesex.

The parifh of St. Mary alone has no church as yet built ; and confequently divine fervice is very feldom performed here ; but, when it is performed, fome private houfe is ufually lent for the occafion. In the county are feven churches, two chapels of eafe, and one fynagogue. The civil government of each parith, or precinct, is under the direction of a cuflos rotulorum, and his affociates, juftices of the peace, who hold a quarter feffion; and fubordinate to them are the feveral conftables, clerk of the peace, furveyors and wardens of highways, coroner, collectors of the parochial taxes, \& cc.

St. George, Crawford, now Charlestown, Negroe-town.
The parith of Kington is bounded Eaft by the parifh of Port Royal; Weft and North, by St. Andrew; and South, by the harbour. The town of Kingfton is fituated in latitude $17^{\circ} 59 \frac{\frac{1}{2}^{\prime}}{}$ North; longitude, $76^{\circ} 34^{\prime}$ Weft. According to fome geographers, the diftance and bearing from London are 4080 miles; and the difference of time from the fame, five hours, fix minutes, Weft. After the repeated defolations by earthquake and fire, which drove the inhabitants

inhabitants from Port Royal, this town was founded in the year 1693, on the North fide of the harbour, which, next to Port Royal, appeared the moft convenient part for trade. The plan of it was drawn by colonel Lilly, an experienced engineer; and in propriety of defign it is, perhaps, not excelled by any town in the world. The plau is a parallelogram, one mile in length by half a mile in breadth, regularly traverfed by ftreets and lanes, alternately croffing each other at right angles, except in the upper part of the town, where a large fquare is left. But the buildings have increafed fo rapidly, that it now extends beyond the outlines of the plan. It contains fixteen hundred and fixty-five houfes, befides Negroe houfes, and warchoufes; fo that the whole number of its buildings, including every fort, may be computed at between two and three thoufand: the number of its white inhabitants, about five thoufand; of free Negroes and Mulattoes, about twelve hundred; and of flaves, about five thoufand; making, in the whole, about eleven thoufand and upwards: thirty-five fpacious ftreets; and fixteen lanes. The harbour is formed by an inlet of the fea, which, after paffing Port Royal, divides into two branches; the Weftern, flowing to Paffage Fort and the mouth of Rio Cobre, forms a fmall bay of fhallow water ; the Eaftern branch runs beyond Kingfton to Rock Fort, making a courle this way of nine miles in length, and is two miles in width in the broadeft part; facing which the town is fituated. For a confiderable way above and below the town, the chanmel is deep enough to admit fhips of the greateft burthen; upwards of a thoufand fail may anchor here in perfect fafety, except from a hurricane; and the water is fo deep at the wharfs, that veflels of two hundred ton lye along-fide of them, to deliver their cargoes.

The buildings here are much fuperior to thofe of Spanifh Town. The houfes are moftly of brick, raifed two to three fories, conveniently difpofed, and in general well-furnifhed; their roofs are all fhiugled; the fronts of mont of them are fhaded with a piazza below, and a covered gallery above. The foil upon which the town is built is in fome parts gravelly; in others, a brick mould, intermixed with gravel; and the Weft part, bordering on a falina, partakes of fea-fand and ooze. From the harbour to the foot of Liguanea mountains is an eafy, gradual afcent, of about four miles

## J A M A I C A.

and a half. The town, being thus fituated on a dry foil, is not incommoded by the lodgement of water in the heavieft rains; and it is thoroughly ventilated by the daily fea-breeze. But, although the flope prevents any water from fagnating in the town, it is attended with one great inconvenience; for it admits an eafy paffage to vaft torrents, which collect in the gullies at fome diftance towards the mountains after a heavy rain, and fometimes rufh with fo much impetuofity down the principal freets, as to make them almoft impaffable by wheel-carriages, and caufe a thoal-water at the wharfs, depofiting accumulations of rublifh and mud: by which means, the navigation of the harbour may, in procefs of time, be obftructed; for even now the channel is greatly contracted, an entire ftreet having been built on the foil thus gained upon the liabour fince the town was firft laid out. Some have propofed to remedy this inconvenience by cutting a large trench Eaft and Weft above the town, to intercept thefe floods, and conduct them into fimaller cuts, on each fide of it, quite to the harbour ; by which method, the water, having a greater length of current, and not flowing fo rapidly, might depofite its foil by the way, and thus neither annoy the ftreets, nor fill up the harbour. But it may be objected to this project, that, if any ftagnant water, or a quantity of mud, thould remain in thefe drains, the effluvia arifing from them might affect the health of the inhabitants, and fo become productive of a worfe injury than what it was calculated to prevent. The remarks before-made, refpecting the modern method of covering roofs in Spanifh Torvn, are equally applicable to Kingfton. The danger from fire is very manifeft. It is true, that accidents of the fort have rarely occurred in this town, the kitchens being detached buildings. But it is ftill liable to fuch a calamity from malice, as well as neglect or cafualty; and the fate of Port Royal, of Bridge Town in Barbadoes, and St. John's in Antigua, fhould ferve as horrible examples. To guard againft fuch ravages, in fome degree, here are wells and pumps in every principal ftreet, conveniently placed, and conftantly kept in good order; and in the court-houfe are fire-engines and leathern buckets. The ready affiftance of feamen from the fhips, which lie very near the town, would doubtlefs contribute much towards preferving it in fuch
events; and the various openings formed by the ftreets and lanes may be likewife confidered as a further fafeguard againft a total conflagration. A project was once in agitation for bringing a part of Hope River into the town, and forming a refervoir in fome commodious place at the upper end, from which a certain number of conduits fhould be laid to fupply the principal ftreets. This fcheme was faid to be extremely practicable, and not expenfive. A want of unanimity prevented its being carried into execution. But there is no doubt it would prove of eminent benefit, in fupplying the inhabitants with a wholefome water for their common ufe; for the well-water liere is in general bad; a few only are fed by fubterraneous drains from the Hope, or fome other of the mountainous ftreams; the reft are brackifh, impregnated with a muriatic falt, if not with tome mineral. They increafe thirft, inftead of flaking it; caufe a dry febrile heat, and fometimes a dyfentery in habits not much accuftomed to them. At the bottom of the town, near the water-fide, is the market place, which is plentifully fupplied with butchers meat, poultry, fifh, fruits, and vegetables of all forts. Here are found not only a great variety of American, but alfo of European, vegetables; fuch as peafe, beans, cabbage, lettuce, cucumbers, French beans, artichokes, potatoes, carrots, turnips, radifhes, celery, onions, \&c. Thefe are brought from the Liguanea mountains, and are all excellent in their kind. Here are likewife ftrawberries, not inferior to the production of our Englifh gardens; grapes and melons in the utmoft perfection; mulberries, figs, and apples, exceedingly good, but in general gathered before they are thoroughly ripe. In fhort, the moft luxurious epicure cannot fail of meeting here with fufficient in quantity, variety, and excellence, for the gratification of his appetite the whole year round. The prices are but little different from thofe of Spanifh Town; but, where they difagree, they are more reafonable at Kingfton, the fupplies being more regular, and the market better fuperintended by the magiftracy. The beef is chiefly from the paftures of Pedro's, in St. Anne; the mutton, from the Salt-pan lands, in St. Catharine; what they draw from the penns in St Andrew's parifh being very indifferent meat. The fupplying of grafs for the horfes kept in this town is a very profitable article to thofe fettlements bordering Vol. II.

## J A M A I C A.

on the harbour and the mouth of Rio Cobre, which are fit for no other production than the Scotch grafs: this is every day brought to the town by water, and fold in fmall bundles, a certain number for a syal. Some of the grafs-planters have made upwards of $1500 \%$ per annum by this commodity. Wood is likewife another article of profit, though not fo confiderable. Near the market-place ftands the original court-houfe, which is a mean, inconvenient building, and now difufed as a feat of judicature, being fixed in the noifieft part of the town. A building erected for a free-fchool, fituated in the upper diftriet of the town, being found more airy and commodious, is now made ufe of for holding the quarterly affizecourt for this county. The parade is a large, handfome fquare; on the North. Weft fide of it are barracks of brick for the troops quartered here; a very well-defigned and convenient logement for itwo hundred men and their officers. The front, which contains apartments for the officers, makes a good appearance. The foldiers barrack ftands detached behind, in a fquare court walled round; in which are proper offices; and at one angle a powder magazitie belonging to the town. On the South fide of the parade is the church; a large, elegant building, of four aifles; which has a fine organ, a tower and fire, with a large clock. The tower is well-conftructed, and a very great ornament to the town. The reitor's ftipend, as fixed by law, is only 2.501 .; but the furplice. fees are fo large, that his income is fuppofed at leaft one thoufand epounds per antrum, Jamaica currency. The county gaol, a hofpital for tranfient fick and poor (who are fupported by an annual igrant of affembly of $300 \%$.), and the free-fchool, have nothing remarkable in their ftrueture. The land appropriated for the gaol was a plat of two hundred feet by one hundred and fifty; but only about fixty by fifty were inclofed a few years ago. It had only one apartment for lodging debtors, evidences, and criminals; and that of no larger extent than fifteen by fourteen feet. The walls, which enclofed it on the South-Eaft and Weft, having neither windows nor gratings, fo effectually excluded the air, that this place of confinement was rendered extremely unhealthy; and the diftempers among the prifoners became a matter of ferious concern. In 1761, upon a reprefentation of the fate of it, the affembly made pro-
vifion for enlarging and rendering it more airy. The number of Whites ufually fhut up here is about ten; and of Negroes about one hundred. This was formerly the habitation of that ingenious and learned mathematician, Mr. Macfarlane, who built and fitted it up as an obfervatory; little fufpecting perbaps at the time, that it would be converted into a receptacle for unfortunate perfons, who are here precluded from almoft every other amufement than that of far-gazing.

The ftreets are all wide and regular, the houfes many of them extremely elegant, and kept very clean, confidering thefe circumfiances, and that the foil on which they fand is perfectly dry. It is natural to fuppofe, that the air is healthy; at leaft there appears not hitherto any local caufe affignable why it fhould be otherwife; neverthelefs, it is certain, that Kingfton has been accufed of being an unwholefome fpot. Sir Hans Sloane, indeed, obferves, that in his time, at fome plantations bordering upon this bay of Liguanea, many white perfons died, as he believed, by the ill air; fome of thefe fettlements lying in bottoms, or low fituations, contiguous to marfhes near the harbour; and, on the other hand, that plantations, feated high, were very healthy, and their inhabitants not fickly. The land Weftward from the town, and confining on the harbour, is, for four or five miles, very low and flat, interfperfed with lagoons, and in many places fubject to be overflown by the falt-water. The hofpital of Greenwich, fituated little more than a mile from the town, upon part of $t$ is low land, is remarkable for a bad air, and the mortality which always prevailed there. The effects of its unhealthy fituation were, that, when a patient was fent thither with only a gentle or intermitting fever, this mild difpofition was apt to be changed into either a malignant fever, 2 bloody flux, or fome other mortal diftemper. It was obferved, that the yellow Weft-Indian fever often reigned there, attended with the moft profufe evacuations of blood, by vomiting, ftools, and even by every pore of the body : when no fuch fymptoms diftrefled thofe patients whofe cafes had been fimilar, and who were permitted to remain in their fhips. The recovery of patients in that hofpital was obferved to be very tedious and uncertain: the leaft indifcretion or irregularity brought on a relapfe. After a flux had

## J A M A I C A.

been ftopped for fome days, the eating of any fort of food which had a putrid tendency, fuch as even a mefs of broth, would fometimes in a few hours bring on a return of the difeafe, accompanied with all its violent fymptoms. Neither did this proceed from any fource of infection in the hofpital, or from its being too much crowded with patients. Thefe things happened even when a fmall number of patients were lodged in the beft-aired, and in the cleaneft, wards. The mortality in this houfe was fo great, and the caufe of it fo obvious, that there was a neceffity for deferting it; no more fick were permitted to be fent thither. During the laft war, it was made ufe of as a place of confinement for the French. prifoners, and proved fatal to feveral hundreds of them. Even the foldiers, who were fent in good health from the garrifon at Port Royal, to mount guard there, were in a few days taken ill, and many of them died; which obliged the commanding officer to relieve the guard almoit daily; by which means he faved the lives of thofe, who, by too long a continuance on this duty, would otherwife have fallen a facrifice. The caufe of this endemia has been, with great appearance of reafon, afcribed to the falt-marfhes and fwamps, the putrid fogs or exhalatione, which infeft this part of the country, and are naturally adapted in a hot climate to produce all thefe baleful effen:

The large tract of falina, lying to the Northward of the hofpital, and extending from Hunt's Bay towards. Water-houfe Savannah, is frequently overflown by falt-water, when there happens any confiderable furge in the harbour. It is alfo liable to be deluged by the brackifh water of the Lagoon, or Ferry River. Much of this water remains afterwards ftagnant, and becomes highly putrid. It is impoffible not to be fenfible of it in traveling over this falina to Kingfon, efpecially at an early hour in the morning, when the ftench of the ooze is often remarkably foetid; and a vapour may be obferved hovering over thefe lagoons and fwamps, of a moft difagreeable fmell. It may well therefore be fufpected, that a Wefterly land-wind, which fometimes blows between the mountains behind the Ferry, efpecially after a violent rain there, may impel there effluvia into the town of Kingtton. I have been informed, by an experienced phyfician, who practifed in this town,

## B OOK II. C HAP. VIII.

that a Wefterly wind generally brought a bad fever among the inhabitants.

Eaftward from the town, at the diftance of from twelve to fifteen miles, in the parifh of St. David's, are three large falt-ponds, and fome lagoons. At certain times of the year, when the feabreeze, or trade, is veering either towards the Northern points, or returning from them to the South-eaft, a wind blows, known here by the name of the rock-wind, and fo. called from its fweeping clofe along fhore from Eaft to Weft. Some perfons have been of opinion, that this wind drives on the putrid effluvia collceted from thefe ponds and lagoons, together with what may arife from the other fmall creeks and ftagnant waters lying near the coaft, and brings them into the town: but this is merely conjectural; and, confidering the diftance, it is not very credible. The inhabitants, it is true, refident at Yallahs, a little way leeward of thefe faltponds, are fewfible of an ill fmell proceeding from them, and are generally fickly. But it is doubtful whether thefe exhalations can be tranfported by the wind fo far as Kingfon, without being altered in their qualities by the many miles of atmofphere through which they muft needs pafs. To waft fuch effluvia unchanged to any diftance requires, one would fuppofe, an almoft calm ftate of the atmofphere, and the gentleft impulfe of wind. But the rockwinds are always ftrong, and therefore muft be deemed capable of difperfing exhalations, and of rendering them inoffenfive at a fimall diftance from their fource. The perfons who inhabit at Yallahs are within lefs than a mile of the two greater ponds, diredly in the track of the fea-breeze, which, blowing acrofs thefe ftagnant waters, and through the lagoons that border on them, muft of courfe bring a conftant ftream of vapours upon thefe people; for which reaton, it is no wonder that they are fickly, fince they are always involved in a peltilential atmofphere. There feem therefore, I think, no probable grounds for believing, that the air of the town is ever annoyed from the effluvia of thefe ponds. Others have imagined, that the Liguanea mountains, which are known to contain mines of lead and copper, emit continual fteams of a noxious mineral vapour, which, whenever the land and North winds blow, are precipitated down upon Kingfon, and contribute

110

## J A M A I C A.

to poifon its atmofphere. But there feems to be as litile foundation for this conjecture, as for that already mentioned. It does not appear, that the imhabitants in the neighbourhood of mines in England are lefs healthful than thofe of other parts. The mines of Cornwall are known to emit mineral vapours very copioufly, notwithftanding which, Mr. Borlafe affirms the air is extremely healthful ; and that the miners in particular, who are moft expofed to thefe vapours, generally live to a great age. The town of Potofi, in South-America, which is feated at the very foot of the mountain containing the famous mines, is remarkably populous and healthy [ $t$ ]. With far more probability it may be alledged, that the intercourfe, which has been carried on between this town and the Spanifh ports of Carthagena and Porto Bello, has been frequently attended with fatal confequences, by introducing from that unhealthy coaft the moft malignant and deleterious diforders. The inclemency of the climate of Porto Bello is known to all Europe [ $u$ ]: not only ftrangers who come thither are affected by it; but even the natives themfelves fuffer in various manners. It deftroys the vigour of nature, and often untimely cuts the thread of life. The heat of this place is exceffive, being augmented by the fituation of the town, which is furrounded with high mountains, without any interval for the winds, whereby it might be refrefhed. The trees on the mountains ftand fo thick, as to intercept the rays of the fun, and confequently hinder them from drying the earth under their branches: hence copious exhalations, which form large clouds, and fall in violent torrents of rain. This continual inclemency, added to the fatigues of the feamen in unloading the fhips and carrying goods, and their immoderate drinking of firituous liquors, muft jointly deftroy the beft conftitutions, and tend to pro-

[^9][ $x$ ] Ulloa's Voyage to South-America.
duce or inflame thofe terrible diforders fo common in this part of the country, The galleons and other European fhips, which ftay any time here, feldom leave it without burying half, or at leat one third, of their mea: whence this place has been termed the grave of the Spaniards; but it may, with equal propriety, be applied to thofe of other nations who vifit it. This remark is fufficiently confirmed by the havock made among the Englifh, when the fleet, under command of vice-admiral Hofier, lay before this port in $j^{2} 26$ for fix months. The inclemency of the air fivept away fuch numbers of his feamen, that he was obliged to bear away for Jamaica. This fleet was afterwards kept on fervice, on the coaft of Carthagena and the Baftimentos chiefly, until June 1728, when it returned to Jamaica in confequence of the peace with Spain; and it was then computed, that, from the time of admiral Hofier's arrival in June 1726 , it had loft two admirals, ten captains, about fifty lieutenants, and near four thoufand fubalternofficers and feamen; who all fell by ficknefs, and not by the hands of the enemy! But, notwithftanding this general fatality of the climate of Porto Bello, and its neighbouring coaft, to Europeans, a Spanifh fquadron, which lay here in 1730, enjoyed a good ftate of bealth. This happy fingularity was attributed to the ftop of the Chips at Carthagena, where the crews paffed the time of the endemia; by which their conftitutions were better adapted to the climate. Sa noxious is the air of this place, that eyen perfons born in it, if above the degree of a Mulatto, fcorn to refide here; and, for the fame reafon, the royal edict of Spain forbids the fair held annually to exceed forty days. The principal fources of this unhealthinefs, exclufive of what has been already mentioned, are, the fwampinefs of the ground on the Eaft fide of the harbour, and a black filthy mud, which at low-water is left, bare, and fends forth an abominable ftench. Such a fituation muft, in any part of the Weft-Indies, render the air malignant; and it will prove fo, in a greater or lefs degree, in proportion as other caufes more or lefs concur in preventing it from being either difperfed or corrected. Upon admiral Vernon's return to Jamaica from Porto Bello and Carthagena, the crews of the men of war, and land-forces, brought with them a very contagious fever. The land-forces had been re-

## J A M A I C A.

duced from twelve to three thoufand, more by ficknefs than in their engagements with the Spaniards. To add to the misfortune of thofe who returned, they were encamped at Greenwich; and the mortality was increafed, as well by the unwholefomeneis of that fpot, as by the rains which fell, and to which the men were inevitably expofed. Tlie malady was foon communicated to the town of Kingiton, where it committed vaft havock. A merchant, who was here at the time, affured me, that, having dined with an intimate acquaintance one day, and left him in the evening in feeming perfect health, he was fummoned the very next day to attend his friend's funeral. He accordingly went, with five others, as a bearer ; and in a few days he was left the only furvivor of the whole company, the other five having caught infection from the corpfe, as they accompanied it to the burial-place. He imputed his efcape to the precaution he took of cherving tobacco, and carrying fome in his hand, which he frequently applied to his nofe. It would be a forrowful tafk to enumerate the many fimilar catalfophes which have befallen this town by the importation of malignant fevers from Porto Bello, Carthagena, the coaft of Guiney, and the Havanuah; not omitting the gaol-fever from England: all of which in their turns have at various periods raged with a fury that threatened to depopulate it. It may be more to the purpofe (fince the town, all circumftances confidered, does not appear to be locally unhealthy) to fuggeft fome means of guarding it againft the invafion of thefe exotic difeafes; fo that, when they happen on board any of the fhips that arrive here, the infection may be debarred from extending into the town.

It would probably be one means of preferving the lives of our feamen, if the fhips, intended for Porto Bello, were difpatched at thofe times of the year when the endemia leaft prevails there. Thefe times are the months of December, January, February, and March. But, when they are unfortunately feized with thefe malignant fevers, there are no remedies which promife fo fpeedy and effectual relief as medicines of the antimonial clafs, and a removal as foon as poffible into a better air. In the year 1769 , his majefty's fhip Levant being at Porto Bello, the crew were attacked with a malignant, petechial fever; but, out of feventy men who

## BOOK II. CHAP. VIII.

were taken with this difeafe, two only died; the reft were recovered by Dr. James's well-known powder, adminiftered by the furgeon of that thip. From a multitude of experiments, this powder appears to be a fpecific remedy for all the Weft-India fevers of the putrid kind; and it is but doing juftice to its merit, to fay, that it feldom has failed of fuccefs, if given early after the firft fymptom of the difeafe has made its appearance, and in dofes judicioufly proportioned to the patient's ftrength. When a veffel arrives at Port Royal harbour with any contagious fever on board, the might be ordered to perform quarantine at the Pallifadoes. Here a convenient lazaretto, open to the fea-breeze, might be ereded at an expence very trifling to the publick; for a boarded or plaiftered houfe would be not only the cheapeft, but wholefomeft, kind of building for this purpofe. Here the patients would breathe a pure, dry, and perfectly falubrious atmofphere ; and might be conftantly fupplied with vegetables, and all other neceffaries, from the town of Kingfton, by water-carriage. The fhips in which the infection had raged might here be duly aired and purified for a reafonable time before they were fuffered to approach the town. A precaution of this nature, fo much wanted, and fo eafily to be put in practice, feems to deferve fome attention from the legiflature of the infand. I think it will be allowed, that, had it been adopted fome years ago, and continued under fit regulations frictly obferved, many thoufand ufeful lives might have been redsemed from an untimely fate. Befides, thefe calamities are not confined to Kingfton alone; for, when they have raged to any confiderable degree in this town, they have unavoidably circulated into other parts of the ifland by means of the conftant refort to it of people from the various diftricts. The wifdom and circumfection of every trading port in Europe have pointed out the utility of fuch lazarettos; and, although the diftemper called the plague has never yet been known in the Weft-Indies, yet the putrid fevers hatched in this climate have at times been nearly as peftilential and mortal ; chiefly fo, when they have invaded a multitude of men pent up in the clofe atmofphere of a fhip, or the warm rooms of towns on the coaft. To this effect is the remark of a fenfible man who refided many years in Jamaica, cited by Dr. Lind. "He obferved the poor

Vot. II. $Q$ © feame1s

## J A M A I C A.

is feamen in the merchant fervice to recover from the yellow fever,
"folely by having the benefit of a free and conftant aimiffion of
" air into a thip anchored at a diftance from the hore; where
" they lay utterly deflitute of every affiftance in ficknef, and even
" of common neceffaries; having nothing but cold water to drink,
"s and not fo much as a bed to lie upon; while gentemen newly
" arrived from England, by being thut up in fmall, clofe, fuffo-
" cating chambers at Kington and Port Royal, expired with the
"s whole mafs of their blood diffolved, and flowing at every pore;
"6 the fifling heat of their rooms having produced a fate of uni-
" verfal purrefation in the body even before death." Such frangers, upon their arrival, are generally obliged to take up with the common lodging houfes; the owners of which, in order to make the mof advantage of their bufinefs, convert cvery little clofet and hole into a bed chamber. The healthieft perfon would find it difficult to refpire freely for a whole night in one of thefe dungeons. How improper then mutt they be for thofe who are feized with a fever, and are thus excluded from that conftant refrefhment of air upon which their recovery fo much depends, that, without it, all medicines are iveffectual! The houfes of towns in this climate cannot be too airy; and on this account the jealoufy-fhutters, as they are called, which freely admit the air, are very excellent contrivances; and no bed-chamber fhould be unfurnifhed with them; for by their means the fmalleft apartment may be confantly ventilated.

There are fome other remarkables in this town, which, fo far as they appear inconfinent with the general health, deferve to be noticed.

The firft is, the practice of cramming fo many corpfes into a fmall church-yard in the centre of the town; inftead of providing a proper cemetery at a diftance, and to leward from all the houfes.

The fecond is, a filthy cuftom of ufing tubs, and empty butterfirkins, inftead of vaults; and exonerating them of their contents every day at the wharfs; by which inceffant accumulation of putrid matter, the mud in thofe parts is rendered fill more offenfive, and injurious
injurious to the health of thofe who inhabit the loweft, which is the hotten, quarter of the town.

The third is, a ftrange method of repairing their freets with the offals and naftinefs raked from all the dunghills about the town; inftead of gravel, or a frefh wholefome foil, of which there is great plenty in the environs.

Thefe are fo many artificial annoyances, which cannot, I think, improve the quality of the air they breathe. Natural evils, if they cannot be removed or remedied, munt be acquiefced with; but for an intelligent people to take pains to poifon themfelves in this manner can only be imputed to a liftlefs indolence, or a great defect of good police among them. The Mahometans can give them fome inftructions not to be flighted. The burial-places of the Turks are handfome and agreeable; which is owing chiefly to the many fine plants that grow in them, and which they carefully place over their dead. They act much more coufiftently than the Chrifians, when they bury their dead without their towns, and plant over them fuch vegetables as, by their aromatic and balfamic odours, can drive away or correct the fatal exhalations with which the atmofphere of fuch places is generally loaded. By this eafy practice they efcape many misfortunes which affect Chriftians from their wandering and dwelling continually among the dead. Cyprefles and rofemary are the plants moft abundant in thefe grounds; and the Turks never, if they can avoid it, lay two bodies in the fame grave. There can be no doube but experience taught them the rectitude of this practice in a warm climate, fubjef fo frequently to the vifitations of the plague. The contrary practice in the colder climates (Britain for example) is certainly in fome degree pernicous, as the air even here, at certain times of the year, is in a ftate to favour the afcent of very unwholefome vapours from fuch grounds, particularly in towns, where the furrounding walls confine the moifture that falls within, and prevents the greater part of it from efcaping any other way than by exhalations. But our adoption of this, and fome other Britifh cuftoms, in a bot climate, is unqueftionably abfurd. Why thould it be thought irrational to follow rather the Turkifh cuftom, and bury the dead at a fmall diftance to the North-weft of our towns in the Weft-Indies, from
which quarter the wind rarely fets, and plant the ground with the wild-fage, rofemary, and other aromatic fhrubs, which grow very abundant in the low lands? If there is really a wide difference between a pure and a vitiated air, in regard to the effects they refpectively produce on the health of mankind (and that there is will be readily granted), humanity fhould unite with good fenfe to remove thofe nuifances and erroneous cuftoms, which have too long prevailed againft the public welfare.

The Jewifh fynagogue in this town is a handfome, fpacious building; and here the principal rabbi officiates. It contains a gallery, like that in Spanith Town, for the reception of their women, who do not mingle with the other fex in their public devotions. The Jews are numerous in this town, being poffeffed of the greateft fhare in the Spanifh trade. They have a convenient burying-ground without the town. No public buildings having as yet been erected for the officers of the cuftoms and the receivergeneral of the inand, their offices are kept in private houfes, firuated in different quarters of the town; which is a very great inconvenience to the trade. Every veffel that arrives is obliged to be entered at the poft-office, the fecretary's, the collector's, comptroller's, naval, and receiver-general's. Thefe being all detached, and at a diffance from one another, the captains of fhips are forced to make the tour of the whole town when they attend thefe offices either to enter or clear. The Eaft fide of the parade, or fquare, in a line with the barracks, would be a very proper fpot for ereating a range of building, to include all thefe offices; but fuch an undertaking has been thought too expentive for the town, or the county of Surry; and the other two counties are faid to have oppofed fuch a fcheme, from an apprehenfion or jealouly that it might one day be converted into a place of refidence for the commander in chief. Moderate men, however, are of a different opinion: they wifh to fee a building erefed here, fo neceffary for the accommodation and difpatch of the traders; and that an exchange, or place convenient for daily meetings of the merchants, was likewife provided; efpecially as no other town of fuch extent and importance is without them. In proportion as the commercial firit and importance are kept up among the inhabitants, they may be lefs inclined to leave

B O OK II. CHAP. VIII.
the walk of trade for party and political wranglings. The erecting of buildings, which are really appurtenant to trade, would encourage that fpirit, and confer that importance. We may illuftrate the argument, by fuppofing what would be the cafe, if no houfe of refidence was provided for the governor, and no fenate-houfe for the affembly. If the former dwelt in a private lodging, and the latter met to tranfact all their weighty affairs in a tavern, or under a large tree; fuch degradation would be apt to bring contempt upon the governmental powers, and leffen the reverence and cftimation with which they ought to be regarded. But the ftrongeft argument is, that, by bringing the commercial offices together into one certain fpot, and affigning a certain convenient place where traders and men of bufinef's can regularly meet, to carry on their negociations with each other, all the fprings and movements of the commercial machine are kept in conftant exact order, confufion and delay are avoided, every thing goes on with difpatch and facility. Trade muft have a livelier current, where the clogs and impediments to its free circulation are removed; and a great anmual faving made in point of time; an article upon which merchants neceffarily fet the higheft value. In the lower part of the town is a very pretty theatre, exceedingly well contrived, and neatly finifhed. Dramatical performances were exhibited here during the laft war ; at which time there was a confiderable quantity of prize money in circulation; but in time of peace, the town is not able, or not difpofed, to fupport fo coftly an amufement. The taverns here are large and well fupplied. In the two principal ones, called Ranelagh and Vauxhall, are long rooms for concerts, balls, and public entertainments. A new governor is generally feafted for three days fucceffively in Spanifh Town. Soon after which, he makes a kind of publick entry into Kingfton; where he is again regaled by the cuftos, or chief magiftrate of the town, and the reft of the inhabitants, who ufually make a fubfcription-purfe for the purpofe. In thefe feafons of feftivity there feems an emulation between the two towns, as if they contended which fhould treat him with the moft fplendid entertainments. The tavern called Ranelagh is a large, lofty building, commanding a fine view of the town, harbour, and fhipping. Here the balls and concerts are ufually exhibited:
hibited; and the company are numerous and elegant in their appearance.

The principal place for taking the air is the road leading to Rock Fort, which fands about four miles Eaftward from the town; and moft of the inhabitants who keep carriages exercife here morning and evening every day. This fort is fituated at the extremity of the long mountain, a rocky eminence, inacceffible on this part, where it projects nearly into the harbour, leaving only a fimall narrow pafs at the foot, where the fortrefs is built. It confifts of two baftions, mounting twenty-one guns (twenty-four pounders), and furnifhed with a fmall powder-magazine, and other habiliments of war neceffary for its defence. Upon the face of the hill is a little battery of fix guns, with traverfed lines that lead up to it. Outlide the walls is a wet ditch, funk lower than the furface of the water in the harbour; fo that it may be occafionally filled. The fort is provided alfo with a draw-bridge towards the Eaftern road; cafemates, for lodging the men; and a houfe for the officers. It is too fmall to admit a garrifon of more than feventy men : neverthelefs, governor $\mathrm{Kn}-\mathrm{l}$-s was fo confident of its ftrength, that he maintained it was capable of ftanding a fiege againft ten thoufand men. It defends the accefs towards the town from the Eaftward, and would undoubtedly prove a great fecurity againft an attack from that quarter; for the only way leading to it is narrow, and confined a confiderable length in a ftrait direction, expofed to the whole fire of the fort, without a poffibility of annoying it: nor could trenches be formed, to carry on a regular approach, as the road is all the way a Challow fand clofe by the water's edge. A guard of foldiers is always kept here; but the fort is faid to be very unhealthy to the men and their officers. The caufe of this has by fome been imputed to their drinking from a brackifh fream which runs near it. Others afcribe it to the extreme heat reverberated down upon them from the hill, which rifes like a wall above the fort. And fome have thought it proceeded from a lagoon, which lies near the mouth of Mammee River, about three miles to the Eaftward. To corroborate the latter opinion, is alledged the inffance, mentioned by Lind, of Whydaw-caftle, on the coaft of Africa; which has been rendered more unhealthy than
the Negroe-town in its neighbourhood by a flight circumfance unattended to at firft. It is built on a fimall fpot of ground, which the fea-breezes cannot reach without pafing over a little, inconfiderable brook of water, which produces fome aquatic plants always covered with a putrid Alime. It is certain, from contant experience, that places adjacent to a foul fhore, or fagnant waters, near the coaft in the Weft-Indies, are invariably unhealthful. But, whatever be the caufe, it deferves a minute enquiry of gentlemen of the faculty, in order to its difcovery; to the end that, if it arifes from fome local evil, that cannot be remedied, the men might be lodged at night in convenient hut, erected for them upon the hill-fide; by which means all of them, except thofe on immediate duty in the fort, might enjoy a purer air, efpecially in thofe hours when a depraved air is found to be moft pernicious; for this is a poit of fo much importance to the town, that the men ftationed here ought neither to be difheartened by apprehenfions, nor difabled by ficknefs, from doing their regular duty. The affembly having lately granted $1500 \%$. for erecting barracks at this fort to contain two hundred men; if the fituation be properly attended to, the refult will fhew, whether the unhealthinefs of the garrifon has been owing to a peftilent quality in the air, or fome other caule.

To conclude with Kingfon. The militia of this town, bork horfe and foot, are well trained, uniformly dreffed, and well armed, at their own expence. The pains they take in learning the neceffary manœuvres, and the charges to which they are put in their equip. ment, do great honour to their public fpirit, efpecially as molt of them are independent in their circumftances. It is thought, that, upon emergency, they could mufter upwards of two thoufand effective Whites; and between four and five hundred effective free Blacks and Mulattoes. The companies of the latter caft are under the command of white officers, excellent in their difcipline, and would probably do good fervice againft an enemy, whenever called upon to give proof of it.

The parifh contains no fugar plantations, the fituation being too dry to admit of any other fettlements than grafs-penns. The following may ferve to give fome idea of the ftate of it:

J A M A 1 C A. Negroes. Cattle. 1734, 1740 1745 1761 1768 , -

Settlements.

In number of Negroes it appears to be confiderably reduced; and, indeed, there feems at prefent but too much reafon for the popular opinion, that this town has paffed the zenith of its glory, having loft twe fuch capital fupports of its trade, as the Negroe-contracts with the Spaniards, and the coafting-intercourfe with Spanifh South-America; in which it ufed, a few years ago, to employ a great number of fmall veffels. It is likewife feldom vifited by the fimall-craft, which ufed formerly to croud hither in fhoals, laden with bullion and other valuable articles. So that it has at prefent very little bufinefs but what concerns the home-confumption of the ifland; on which account, feveral of the merchants have, fince the commencement of peace, betaken themfelves to planting, as a more gainful employ than trade carried on under the prefent diAtreffed circumftances. War, fo fatal to fome ftates, has ever been the beft friend of this town, by augmenting the confumption and demand of merchandizes; by filling it with new acceffions of people and wealth; and by laying open that profitable traffic in thefe feas which in time of peace is too ftrictly watched. From the earlieft fettlement of this ifland, its trade was ever moft flourifhing while war fubfifted with the Spaniards; which has adminiftered fuch conftant opportunities of fharing in their gold and filver, as well by private commerce as by open hoftility. For this reafon, their proverbial faying of, "Peace with England, and war "s with all the reft of the world," was not ill-founded. Yet I venture to hope, that, by feadily cultivating a better correfpondence with the free Indians on the Southern continent, the trade of this town is very capable of receiving a valt enlargement; which may effectually preferve it from decay, and make it lefs dependent on a ftate of war for its fupport.

In this town are two houfes for refining fugar ; but the quantity they annually confume in this manufacture I am not informed of.

## BOOK II. CHAP. VIII.

The number of veffels which enter and clear at this port is computed at four hundred, or upwards, one year with another. Whence it will appear to be ftill a place of very great import and export. For maintaining the harbour, feveral very excellent provifions have been made. Penalties are laid on any perfon taking materials or ballaft from the fpit of land, called the Pallifadoe, which forms a barrier between it and the main fea; as well as on thofe who may throw rubbifh or ballaft into the harbour. The channel is properly marked; and the pilots under yood regulation. And, in order to prevent diforderly mooring of the Chips, a tax is laid in the following manner:
On all veffels arriving from the Northward of the tropic of Cancer ;

|  | s. | $d$. |  |
| :--- | ---: | ---: | ---: |
| Three mafts, | i5 | 0 |  |
| Brig, fnow, or bilander, | - | 10 | 0 |
| Sloop, and fchooner, | 7 | 6 |  |

And, on all veffels coming from between the tropics, one half the above rates; except coafting veffels, which are taxed 2 s .6 d . each, payable every three months. The money arifing from this import is applied to the eftablifhment of a water-bailiff; whofe bufinefs it is, to fee that all thefe veffels fix their moorings properly and without confufion. It feems, however, a little impolitic to throw this additional load upon the fhipping that frequent this port, from which the other ports of the ifland are exempted; efpecially as a very moderate addition to their annual parifh-tax might have anfwered the purpofe. The church-wardens of this town are incorporated, for the better management of every thing relative to the parochial taxes; the markets and ftreets are under the regulation of the juftices and veftry; the market for butchers meat is moft plentifully fupplied; and the fifh-market, which is kept every day from eight in the morning till two in the afternoon, is fuperior to moft in the world.

It is impoffible to afcertain, with precifion, either the number of the inhabitants, or the ftate of health, from the number of burials, becaufe many feamen and ftrangers who die are confounded with the town's people.

Vol. II.

## J A M A I C A.

The number of births and deaths for feven years to the year $177{ }^{1}$ was as follows:
Born $\quad 988$.
Died $\quad 2085$.

Deaths exceed the births - 1097.
The thermometrical heat of this town is greater than that of Spanifh Town, in general about three degrees upon the medium. The air is lefs elaftic; and the water, as I have before remarked, is in general of bad quality. From what has been premifed, it may be concluded, that it is not by any means fo healthful. Some have gone fo far as to compare it to a large hofpital ; and to affert, that more people die in it in one year than in all the reft of the ifland in three. But this is an exaggeration ; and the town is of late years become much healthier than it formerly was, when the mountainous tracts neareft to it were covered with woods, which have fince been pretty well cleared and laid open, and the lagoon-water more freely carried off, by cultivating the Scotch grafs, and cutting drains near Salt River. 'The removal of thofe annoyances which meet a ftranger's nofe upon entering the town in the morning, together with the enforcing of fome other falutary regulations, might probably contribute to make the air ftill more favourable to life; yet there are many here, whofe conftitutions by long habit are inured, and who attain to a good old age, notwithftanding the inconveniences pointed out; but, in general, it muft be allowed, that this town is not fo propitious to the health of perfons newly. arrived from Europe as might be wifhed.
S E C T.

## St. A N D R E W.

THIS parifh is bounded on the Eaft by the parifh of Port Royal, and part of St. David; on the Weft, by part of St. Thomas in the Vale, and St. Catharine; on the North, by part of St. Anne, and St. Mary; and on the South, by the harbour and parifh of Kingfon. It is watered with fourteen rivers; the principal of which

## BOOK 1I. CHAP. VIII.

which are, the Wagwater, which empties itfelf into the fea on the North fide, after a courfe of about thirty miles; the Hope, which croffes the Eaft fide; the Pedro, which enters St. Thomas in the Vale on the Weft; and the Salt, which falls into the harbour on the North-weft part of Hunt's Bay. The North-weft angle of the boundary-line terminates at a large cotton-tree, on the fummit of a hill; from which there is a diftant view, in clear weather, of the fea on the North and South fides of the ifland.

The Salt River rifes about three miles above Hunt's Bay, and is joined by the Lagoon River, which divides this parifh from St. Catharine, and whofe fource is about two miles further inland. Both thefe rivers are croffed with bridges in the way leading to Spanifh Town. The Salt River Bridge has a toll-gate, granted to the proprietor; in confideration of which, he is obliged to keep them, together with about one mile of the road, in good repair, and to maintain a ferry-boat at the croffing of Rio Cobre, for the accommodation of paffengers when that river is flooded. Thefe rivers are navigated by flat-bottomed barges and canoes, which are chiefly ufed for tranfporting grafs, wood, and lime, to the town of Kington. A large tract of lagoon lies between their ftreams; great part of which, having been drained by cuts, which carry off the water into the rivers, is converted into good pafture ground; and that which is more fwampy bears the Scotch grafs very luxuriantly. The road, leading from the bridge towards Kingfton, is for about a mile extremely romantic: on one fide is a range of fteep, rocky mountain, which fcarcely admits of room fufficient for carriages to pafs at the foot of it; on the other fide is a branch of the Salt River, fed here and there with fmall rivulets oozing from the bottom of the mountain. This water is exceedingly brackifh ; but it affords good water-crefs, and plenty of fifh. This prey invites the alligators; which are faid to abound here, though rarely feen by any except the Negroes who navigate upon it.

The village of Half-way Tree is fituated a little more than two miles North from Kingfton, at the interfection of the three roads which lead to Spanifh Town, to St. Mary, and St. George. This village enjoys, with a good air, the moft agreeable views. Behind R 2

$$
\mathrm{J} A \mathrm{M} \mathrm{~A} \boldsymbol{\mathrm { I }} \mathrm{C} \text { A. }
$$

are the majeftic Blue Mountains, rifing above one another in gradation, till they feem to touch the clouds: on each fide, lively fields of canes, intermixed with elegant villas and paftures: in front, the harbours of Kingfton and Port Royal, crowded with Thipping, fome at anchor, others plying in various directions: beyond thefe, the Healthhhire hills in St. Catharine, gradually declining towards Old Harbour: and, laftly, the horizon clofing on the beautiful azure of the ocean. A number of little grafs-penns, with good houfes on them, are difperfed about the neighbourhood, chiefly the property of merchants in Kingfton, who occafionally retire to them from the hurry of bufinefs. But its chief ornament is a very magnificent houfe, erected here a few years fince by Mr. Pinnock ; which may vie, in the elegance of defign, and excellence of workmanfhip, with many of the beft country-feats in England. The ftone ufed about this fabrick was brought from the Hope rivereourfe: it is far more beautiful than the Portland, and of a clofer and finer grain. The mahogany-work and oruaments within have been jufly admired for their fingular beauty, being, as I am informed, felected with great expence. Half-way Tree has a finall, but very neat church, with a tower and organ. The emoluments of the rectory, arifing principally from fix hundred acres of rich glebe-land, leafed advantageoufly to fome planters, are faid to be about $1400 \%$ per annum. The ftipend being only $200 \%$. of this country money, it may eafily be judged that the glebe is extermely. valuable; and this is therefore confidered as the beft living in the governor's prefentation. Some yearo ago, there was a regulat weekly affembly held here ; but it has fince been dilcontinued, till lately, when it was revived, and thought inferior to none in the ifland. The village coatains about twelve or fourteen houfes, Paffing on from hence to the Northward about two miles, along: a road of eafy afeent, we come to the foot of the Liguanea Mountains : thefe are the firft fteps leading up to that valt pile of mountains which range through the inland from Eaft to Weft. The foremoft are of moderate height, ferving as natural buttreffes to fuftain the interior and more maffive. As we proseed, they feem to increafe in magnitude and elevation, till we arrive at the higheft. of all, called the Blue Mountain Ridges. The foil on their South
afpect is in general a red clay; but, in other parts, it is of a coarfer, friable texture, and intermixed with fmall ftones, or a fort of grit. Where they have been cleared of wood, and cultivated, their infertility has been promoted by heavy rains wafhing down the finer mould. From Kingfton they appear of a reddifh caft, interfperfed with verdure here and there, and furrowed with innumerable gullies, fome of which are very deep; and at this diftance they refemble very much the South afpect of the Madeira ifland. The road afcending into thefe lofty regions is in general fteep and irregular, incapable of admitting wheel carriages. The journey is therefore performed on horfe-back. But it is not dangerous, except in one part, where the road paffes along a precipice, and is formed on wooden ftakes driven into the fide of the mountain, and well covered with crofs timbers and earth, which make a kind of geometrical bridge. But this is of no great length; and, being kept in good repair, it feems to be accompanied with more of horror than of real peril. Afcending higher, vaft numbers of the larger fivifts are feen $\mathfrak{k i m m i n g}$ over the mountain-tops with great velocity; and fometimes they whiz along fo near the traveler's head, uttering their fhrill cries, as to fartle him, if he is unprepared. The bull-finch's notes are more entertaining: they are very fingular, and of a melancholy air. The beautiful forked-tail papilio flies are feen in fwarms; they generally keep together, flitting in a direcion with the wind ; they feem ever on the wing, and fometimes venture to foar above the higheft pitch of thefe mountains. In this part of the country there is no appearance of lime ftone. 'The ftone obferved here is brittle and crumbling, difpofed in lamina, turns black in the fire, and will not ferment with aqua fortis. The lime made ufe of is manufacured from incruftations, which are found in fufficient abundance. The trees, for the moft part, are flender and ftunted; many of them are enveloped with mofs, and others entirely killed by it. This covering makes them appear at a fmall diftance as if they were frofted over; and the coldnefs of the air maturally caufes this deception on firft arriving from the glow of heat which broods over the lowlands about Kington. 'The thermometer here, in general, was at fixty and fixty five degrees. in the middle of the day in July; while it rofe to eighty-fix and

## J A M A I C A.

nnety in Kinghon. The ground on the elevated fpots feels, and yields to the tread, like a new carpet ; it is coated all over with a dcep mofs. The parts I feak of are adjacent to Mr. Adams's houfe; for the Blue Mountain Ridge appeared from this place as much higher as this feemed to be above the lorv lands. Every evening a vapour defcends from thefe fummits towards the vales below, and probably adds fome ftrength to the land-wind, which fets from this quarter after fun-fet. In the morning the fog rifes, and feems to creep in a regular train to the higher grounds; fo that, for a great part of the day, it continues fo thick, as to give the air a chill, even at noon, equal to what is felt here before fun-rife. Where it is more broken and difperfed, fo as to admit the folar rays to pafs freely, warm fteams immediately begin to be exhaled; and the moffy ground feels to the hand like a hot bed. Upon arriving at the eminence, whereon Mr. Adams's houfe is built, a very beautiful fcenery greets the view. Below are feen the richly-cultivated vale of Liguanea, the harbours of Kingfton and Port Royal, and great part of St. Catharine, and St. Dorothy. On a fudden, the whole is excluded from fight by a denfe cloud, interpofing itfelf like a magnificent curtain. In a moment afterwards, the curtain breaks here and there in different parts, admitting only tranfient glances; but, when withdrawn entirely, a moft luxuriant and extenfive landfchape opens, animated with the full fplendor of fun-fhine. In front are cane-fields of the livelieft verdure, paftures, and little villas intermixed; the towns and ports of Kingfton and Port Royal; the fhipping fcattered in different groups; the forts, the hills of Healthfhire, the rocky breakers, and cayes whitening with the furge; and, beyond thefe, a plain of ocean extending to the Southern hemiphere. To the Weftward are feen the gliftning meanders of the Cobre; the town of St Jago de la Vega; the bay of Old Harbour ; and a vaft champaign of fertile country, terminated by the lofty range of Carpenter's Mountains, at fixty miles diftance.

Thefe objects form all together a very pleafing combination. The pleafure which the mind receives from contemplating them is confiderably heightened by the impenetrable gloom of thick vapours behind, which exhibits a noble contraft to the brilliant picture in

## BOOK II, CHAP. VIII.

front. Another fcene, not lefs magnificent, though more awful, frequently prefents itfelf in the hot months. The clouds affembling about noon gradually thicken, grow black, and defcend lower; till they appear a fpacious fea, clofing over and covering the inferior objects entirely from our view. Soon afterwards, the vapoury particles begin to condenfe and fall in rain; the lightning flafhes with great vivacity, as it traverfes along, in a variety of angular or ferpentine directions. We hear the majeftic thunder rolling at our feet, and reverberated by a thoufand echoes among the hills. This tumultuous interlude continues until the vapours, grown lighter by a plentiful difcharge of their contents, begin to re-afcend and difperfe, climbing over the ftately pimacles of thefe mountains, like flocks of theep retiring haftily to their fold.

Whenever the fog breaks or difperfes about noon, the fun-beams ftrike here with more power than would have been imagined at fo great an elevation. But the moffy covering of the ground, which is adapted to imbibe the warmth impreffed upon it by every ftrong gleam, and the fudden variations in the fenfible flate of the atmofphere, by the interpofition or recefs of thefe vapours, doubtlefs affect a perfon here in like manner as the fudden tranfition in England from a cold, raw air into a heated, clofe apartment. The little pike, from whence the moft agreeable view is taken, is about half a mile from Mr. Adams's houfe, and named Catharine Hill, in honour of governor Moore's lady, who had the curiofity to pay it a vifit in the year 1760 . This hill is not much lefs than a mile perpendicular height above the level of the fea. The walk to it from the houfe is not in the leaft incommodious on account of heat, even in the middle of the day. Who peregrinates into thefe regions finds every frefh afcent, however fhort, affording not only a new air, but a new fcene of nature, in regard to its profpect, its plants, and animals. The birds, the finh, and infects, are many of them totally different from thofe we meet with in the lower fituations: and the face of things carries fo little fimilitude in appearance to what commonly occurs in other parts of the ifland, that one feems to have been tranfported by fome magic vehicle into a foreign country. This obfervation holds, it is true, in a certain degree, with refpect likewife to fome other diftricts of Jamaica;

## J A M A I C A.

for the Eaft and Weft ends, and the North, North-eaft, and Northweft fides, are almoft as diffimilar, in the afpect of the country, the weather, the plants, birds, and infects, as if they belonged to as many differently fituated iflands. There are, neverthelefs, feveral to be met with in thefe mountains of the fame fpecies as in other parts. The ring-tailed pigeons frequent them in great numbers: they are feen conftantly on the wing, and generally darting along the fogs, which it is imagined they involve themfelves in, the better to conceal their flight. There are found, befides, a fmall martin, the whole upper parts of whofe plumage are of a gloffy, golden green, the inferior parts white; fiwifts, whofe upper plumage is black, except a ring of white encircling the neck, and the parts below entirely white; blue-finches; dark-brown thrufhes; wood-peckers of various kinds; black-birds of the merops fpecies; blue-fparrows; long and fhort-tailed humming-birds; blue and red-throat bull-finches; black and orange-coloured bull-finches, and brown petrils : the latter are faid to be very numerous on the higher parts of the Blue Mountains, where they breed in holes made in the earth. In the rivuleta are found a fqualid, yellow fucking-fifh, and the large common and hog-nofed frefh-water mullets. Of the quadruped reptile clafs, are the common grey lizard, a froall tree-frog, a fmall galli-wafp, and rats in abundance. Of the infect tribe, here are a fpecies of crickets, which chirp like birds on the approach of the evening-durk; a great variety of papilios and curculios, fome of the latter green and gold, others grey; a large, black and yellow-ftriped humble-bee; a fly of the cantharides kind; red and ftinging ants; wafps; a beautiful, long forked tail butterfly, of a copperifh and green hue. Of plants are obferved a prodigious variety of ferns, and a ftill greater of moffes; black and bill-berry bufhes in abundance, large and flourifhing; the wild-forrel ; wild garden-mint, or mentba vulgaris; and feveral aromatic herbs and Thrubs. The juniper-cedar, agnus Scytbicus, and a yellow timber-tree, called here Mulatto-wood, are likewife very common, except the firft-mentioned ; it had a much ftronger fcent, and the wood of it was of a deeper red than the kind generally met with. The wild-forrel is as common as in England; and the garden-mint grows in wide-fpreading tufts along the fide of the road;

## BOOK II. CHAP. VIII.

road; perhaps it has been propagated from fome plant, either cafually dropped, or put in by defign ; but it is remarkable, that it grows, though in a very fterile foil, as luxuriantly as we find it in any Englifh garden. The bill-berries are chiefly feen on the higher eminences; but they are exceedingly numerous in fuch fpots; and the black-berries not at all different from thofe of England, either in fize, or the mawkifh fweetnefs of their tafte. Cockroaches were not expected to be feen here: it is true, they are very fcarce; and, 1 incline to believe, not aborigines of a region fo unfuitable to their nature, from its coolnefs; but probably brought hither from Kington in fome of the packages of bottled liquor, or provifions, which it is ufual for the parties to take with them, who vifit this retreat for the fake of health or curiofity. That the fate of the atmofphere is generally very cool, I think there can be no doubt, fince it has been found fo in the month of July; and I have been informed, that, during the other hot months, the difference between the thermometer here and at Kingfon is commonly twenty to thirty degrees. The birds that were fhot did not begin to fmell till after the fourth day. A North wind almof conftantly blows, and fometimes with great violence, when the vapours far below are failing along with an Eafterly breeze, and the fhips ftanding in for the harbour with that breeze right-aftern. The tranfition from the heated air of the low lands caufes the chill to be the more fenfibly felt by thofe who remove to this clevation; the fenfation therefore is not at all wonderful. A fire is found neceflary, even in July, in the evening; and fome perfons have hardly been able to keep themfelves warm enough in bed with two blankets. The butter, which at Kingfon was in a liquified ftate, became fo firm in one night's time, that a knife, ftuck into it, lifted the faucer in which fome of it had been put. But the coldnefs of the air is chiefly diftreffing to the Negroes and horfes; they quickly grow fluggifh and miferable; the latter in particular, alchough fimulated by extreme thirft, have been known to refufe tafting the fpring-water for feveral days, which was perfectly pure and tranfparent, but too frigid for them. Exercife is attended with no fatigue; it ferves only to keep the body in a comfortable glow. The fteep afcents are climbed on foot in the middle of the day, without inconve-

Vol. II.
nience; the air braces the tone of the fibres, renders the fpirits lively, and creates an immoderate appetite for food, which unfortunately is not here in fuch abundance as to be proportionate to the demands for it. Hence it may be fuppofed, that frofts are frequent on the Blue Montain fummits during the winter months, as fome have pofitively afferted $[\boldsymbol{e}$. Thofe fummits have been explored by very few perfons; the air at fuch a height is almof too pure for human refpiration. I have been informed that fome Negroes died in pafing over them, fome years ago, before the pacification was made with the rebels in this inlind. Thefe fummits are bare of trees and fhrubs, but well covered with a thick mofs, which gives harbour to vaft numbes of rats. In what manner they procure fubfiftence in fo dreary a refidence, I have not been able to learn.

I muft not be filent on a phxnomenon, which I do not find noticed by any writer of our natural hiftory. I fhould, however, premife, that, in regard to the fact, it was communicated to me by a gentleman of fuch ftrict veracity, as not to admit a fladow of doubt. Fe related it as a fingularity which he could not readily account for, but had been obferved by many perfons living near the Yallahs and Buff Bay rivers. During the months of November, December, January, and February, when little or no rain falls, feveral rivulets of water are obferved to gufh from the North fide of the Ridges, which increafe and fivell the tide of thefe rivers very confiderably: but they are not remarked at other times of the year, even after the heavieft raius. The prodigious mantle of thick mofs which cloathes thefe Ridges, extending over many hundreds, if not thoufands of acres, receives and imbibes the water that almof continually diftils upon it from the vapours that brood over their fummits. Thefe rivulets are not feen until after the periodical North winds are fet in, which ufually happens in the be-
[w] According to a very accurate trigonometrical menfuration, lately taken by Dr. Alezander an'Renzie, affited by Mr. George Gauld, furvejor to his majefty, the refults were as follow: Feet Height. Mile.

[^10]
## B O O K II. C HAP. VIII.

ginning of November ; and they continue blowing till March, and fometimes later, but then grow more faint, and interrupted with the South-eafters, or fea-breezes. The coldnefs and violence of thefe Northerly winds muft be far greater at fuch an elevation than is ever felt below. The fun being at the fame time in its Southern declination, the Northern flopes of the Ridges are fhaded mof part, if not all the day; and very little moifture can be exhaled from them. Is it not therefore probable, that the vehement preffure of thefe winds, directly againft the Northern afpects, may fqueeze the mofly covering as it were a fponge, fo that the aqueous particles contained in it run into cohefion, and affemble in fmall rills ; which, as they trickle downswards, are joined and augmented by others, till they form thofe larger rivulets, which have been obferved to unite with the currents below, that lie in a convenient direction to receive them? May not the coldnefs of thefe Norths fo harden the fuperficial foil of the Ridges, as to render it impervious to the humid particles lodged in the mofs; though, in the warmer feafon of the year, it is fufficiently open to admit a free percolation to all that is not carried off by the fun's exhaling power? The fea-breeze has an oblique direction againft the Ridges, and therefore, when moft violent, blows upon them with much lefs preffure. It is moreover to be confidered, that the mofs is ranker and more luxuriant on the North afpects; and the vapours which over-hang them are, in general, denfer and more conftant than on the South fides. Whether the caufes I have afigned are rational, or probable, muft be left to the decifion of abler philofophers. That judicious and benevolent writer, Dr. Lind, recommends ftrongly to the inhabitants of the low lands, in this and other hot climates, to retire to a hilly or mountainous refidence at thofe times of the year when the heavieft rains fall. By their violence and continuance during the face of feveral fucceffive days, the low lands are faturated with water; the exhalations from the earth are morecopious than at other times; and, if any feries of dry weather has preceded (which generally is the cafe), they are more noxious to health. Add to this, that the atmofphere is fultry and moift. Thefe caufes difpofe the human body to be affected with agues and fevers (and, of the latter clafs, the putrid),

## ${ }^{13}{ }^{2}$

## J A M A I C A.

which chiefly affault perfons newly arrived from a cold Northern climate. There is no country in the torrid zone better furnifhed than Jamaica with retreats of this kind; the hills being feattered every where very liberally near the coaft, and univerfally healthful. The inhabitants of Spanifh Town have the neighbouring Red Hills; the people of Kingfon are near the Liguanea Mountains; and in every part of thefe tracts the air is pure, temperate, and falubrious, during the whole year. The inhabitants of there mountains not only enjoy good health, but a fure indication of it in the frefhnefs of their complexions; and they are ftrangers to thofe deleterious diftempers which fometimes ravage the towns. The barrack at Stoney Hill in this parith affords a ftriking proof of the goodnefs of this air. The company of foldiers quartered here were frefh from Europe, and luckily did not halt long enough at Kingiton to contract ficknefs. The whole garrifon continued in perfect health (and only one died, which happened, as I was informed, by a cafualty) till long after their arrival, when they were removed to Kingfton; where probably, not more from the change of air, than the greater facility of procuring firituous liquors, they grew fickly, and reduced in their number. No climate can be more propitious to European conftitutions than thefe elevated fpots; but the perfons who for the mof part emigrate to the ifland have not any choice of place for their future refidence, and of courfe they take their chance. Yet I cannot but think, that fuch as have weathered a feafoning in Kingtton, and lived there fo long as to have it in their power to chufe an occafional place of abode in a more eligible fituation here, fhould confult their own future health, and that of others fent over to their patronage and employment, and purchafe or rent a fmall fettlement fomewhere among thefe mountains, to ferve for a retreat during the moft fickly times of the year. But men educated and engaged in the buftle of commerce are too apt to defipife thefe cautions, as fpeculative and chimerical. Many are predeftinarians in their way of thinking, and will not flep afide one inch to avoid a falling rock; and others are unwilling to. lofe a fingle hour which may be employed in the purfuit of money, too inattentive to the purfuit of Lealth, without which their labours are, in refpect to their own enjoyments, but vain and illufory. Hence

## BOOK II. CHAP. VIII.

it happens, that we fee fo many pofting away from the ifland on their laft legs, to perifh under the icy rigours of a Northern climate; who, by occafionally withdrawing into the more temperate coolnefs of the mountains in this ifland, might have remained in the full poffeffion of good health; or, on their quitting it to re-vifit their native land, have carried with them a plenitude of bodily vigour, as well as opulence. The turf on the Ridges is Chort, and intermixed with a variety of wild aromatic herbs; fo that heep, but particularly goats, might be paftured on it with great advantage to the delicacy of their flefh; and, it is probable, their milk would become in fome degree medicinal in feveral diforders. No experiment has yet been made to adom the naked pikes with fome of the various fpecies of firs which are fo common in North-A merica; and from whence feeds, or young plants, might be had in great perfection, by reafon of the fhortnefs of the paffage. They have great beauty as well as utility, and would doubtlefs thrive extremely well on thefe eminences. The few fettlements fcattered here have. gardens, which produce almoft every fort of European culinary vegetables: thefe, indeed, are cultivated with great fuccefs at the North-fide of the ifland, and in all the interior parts. I have feen a piece of ground in one of the North fide parifhes fowed with cab-bage-feed, immediately after the wood had been cleared; and the plants it produced were beyond all comparifon much larger, firmer, and better flavoured, than any I have ever met with in England. I have feen quince-trees in a gatden at Old Woman's Savannah, in Clarendon, which bore very fine, large fruit; but the apple-trees do not produce any where fo well as in the Liguanea Mountains: in the lower parts of the ifland they fhoot too much into wood, and their fruit degenerates; in thefe mountains, they appear to fructify beft on the highef fites. The American and European peach, nectarine, and apricot, with feveral fpecies of plumbs, the rafberry, ftrawberry, and mulberry, would hardly fail here, if planted. in fituations open to the fun, and theltered from the violence of the North winds. I have tafted-nectarines which were produced in the Vale of Luidas, in St. John's. They were fmall, but retained all the delicious flavour peculiar to that fruit. They would certainly fucceed better in fome part of thefe mountains, where the
general fate of air is found to approximate neareft to that of the Southern provinces of Europe.

The account I have given of thefe mountains is, I confefs, very imperfect; no perfon, I believe, has hitherto vifited them with the profeffed defign of examining all their natural productions, or obtaning a regular information of the temperature of their atmofphere throughout the year, or of afcertaining their height by accurate barometrical obfervations. Tafks of this fort are referved for men who are at entire leifure from the avocations of bufnefs and office ; and who, to the incentives of a laudable curiofity, can join all the abilities, both of genius and fortune, that are neceffary to purfue its full gratification. There is good reafon to believe, that a gentleman who is duly qualified to explore them would meet with ample materials to recompenfe his toil; and it is greatly to be wifhed, that they may undergo a further ferutiny. Sir Hans Sloane poffeffed all that difcernment and knowledge requifite for a cultivation of natural hiftory. But he was fettered by the duties of the place he enjoyed under the duke of Albemarle; and, befides, the ifland was, in his time, in fo rude a ftate, that it might have been impracticable for him to have examined much of its mountainous diftricts, even if he could have found futficient leifure. And hence the many inaccuracies in his work; for he was obliged to rely chiefly on the writings and informations of other men, for want of opportunity to ground his deferiptions on the refult of his own perfonal experience. Much ufeful information of thefe interior regions might perhaps be gained, if the affembly of the inand were to grant an annual penfion of three or four hundred pounds fterling to fome perfon thoroughly qualified in the branches of natural ftudy: I mean thofe in particular which have relation to agriculture, hufbandry, food, medicine, minerals, and commerce. The advantages to be reaped from fuch an appointment would depend on the ability and fpirit of the perfon chofen. In the prefent age, it would not be difficult to engage one competently qualified; fince there never was a period in which this ftudy employed fuch numbers of ingenious men in our mother-country.- This patriotic ardour for promoting fcience in general, and in particular natural hiftory and hulbandry, has not been confimed to focieties only:

## BOOK II. CHAP. VIII.

private gentlemen have exerted their fingle efforts in fupport of it, and laudably devoted part of their fortunes to this end, inftead of wafting it in unprofitable diffipations. The inand of Jamaica has never wanted gentlemen of diftinguinhed tafte for the fine, as well as the more ufeful and oeconomical, arts; and, fince the inland is fo opulent, that the charge of fuch an appointment would hardly be felt, what more favourable circumitances can be hoped to concur, either towards enfuring fuccefs in the undertaking, or giving the public that, fatisfactory knowledge of foils, climates, and productions, that, while it gratifies the literati, may allo tend to improve and people this country? The want of a liberal education, or an attention of the whole foul to get money, as if it were the only rational object of purfuit in this world, has occafioned men in general to treat the ftudy of natural hiftory, and its followers, with contempt and ridicule; all are indiferiminately confounded with the defpicable tribe of infect-hunters, and collectors of gimcracks. We fhould, however, be cautious to feparate from this drofs all thofe, whofe labours conduce to the moft ufeful purpofes of life; who not only difclofe to us the wonderful mechanifm of the creation, and the wifdom of the Deity; but exemplify his unbounded benevolence to man, while they inftruet us in the means by which our health may be preferved, our life prolonged, our agriculture improved, manufactures enlarged and multiplied, commerce and trade extended, and the public enriched. I muft confels, that this ufeful purfuit has not been without its fautors in Jamaica. Sir Hans Sloane fint haid open a new fene of American productions, not much known hefore to the learned in Europe. Yet, before his time, the fcience was cultivated in this inand by Dr. Barham, whom Sir Hans frequently quotes, and whofe manuferipts were never publifhed. Some time afterwards, Dr. Patrick Brown undertook a fimilar work, containing many undefcribed plants and animals: this work he was enabled to publifh chiefly by the fubfeription of the gentlemen of the ifland. The late Dr. Anthony Robinfon likewife made a collection of feveral hundred figures and defcriptions of Jamaica plants and animals; the greater part of which are non-defcripts: but he unfortunately died before it could be digefted into a regular feries for publication. This

### 2.36

## J A M A I C A.

work, if it fhould ever be given to the public, will be found to correct many errors in Sloane and Brown ; who, compared with him, were in various infances very fuperficial obfervers, or ill-informed. He invented a vegetable foap, fuperior in its properties to common foap; for which difcovery, the affembly of this ifland granted him a reward of one hundred pounds fterling. He likewife prepared a fage from a fecies of the palm, fo common in Jamaica, equal in its alimentary qualities to what comes from the EaftIndies. Notwithftanding thefe voluminous collections, it is certain, there ftill remains a very great number of plants and minerals in this inand to be defcribed and claffed. And, to compleat the whole, there is required a judicious analyfis of their properties and ufe. I have been informed, that her majenty queen Anne, upon the reprefentations of Sir Hans Sloane, gave out of her privypurfe 200 . fterling per annum, to fupport and encourage a botanical profeffor in this ifland; but her death happened foon after, and the bounty was withdrawn.

The importance of cultivating this fcience, in a part of the world fo abounding in materials, will not be denied, when we confider the immenfe fums that have been acquired in trade by the Jefuits bark, the canella, cochineal, indigo, logwood, and various other vegetable productions; whofe value might ftill have been loft to the community, and their preparations unknown, had not fome knowledge in natural hiftory revealed them. And there is very probable ground to fuppofe, that there is in this illand a vaft variety of plants ftill to be examined; whofe fruit, gums, barks, or roots (to fay nothing of the fomile and mineral kingdoms), might be found very proper fubjects for export, or for œconomical ufes among the inhabitants. In order to promote fuch beneficial refearches, it is to be wifhed, that thofe planters, who fend their fons to Great-Britain for education in phyfic and furgery, would direct, that botany fhould alfo be attended to, and made a principal branch of their ftudy. Botanical knowledge feems particularly requifite to their practice in a country that teems with vegetable remedies for moft of the diftempers incident to the climate. A total ignorance of this ufeful fcience is a moft contemptible defect in the practitioners here; for what can be more reproachful than to have
it faid, and with truth, that many of the Negroes are well acquainted with the healing virtues of feveral herbs and plants, which a regular phyfician tramples under foot, with no other idea of them, than that they are no part of his materia medica, nor any better than ufelefs weeds? It will be no fmall affiftance to any perfon who may hereafter botanize in Jamaica, that Sloane and Brown have already paved the way; but, indeed, a thorough difcovery of the virtues and ufes of what have been already defcribed, feems to be more wanted at prefent than a further fcrutiny after non-deferibed plants. Superadded to this will be the endeavours of gentlemen of the ifland to introduce exotic plants and trees from the Eaft-lndian and American continents, of fuch kinds as have been moft celebrated for their medicinal, or fome other valuable qualities. No part of the ifland feems better adapted for fuch nurferies than the Liguanea or Midland Mountains. They would require fome care till their feeding time; after which, the different fpecies might eafily be propagated in other diftricts.

I return from this digreffion to clofe my account of St. Andrew's. The lower, or more level part of the parifh, comprehended under the name of Liguanea, is the quarter moft appropriated to fugar-plantations. The foil here has been chiefly formed by the fine mould wafhed down from the hills, and produces a good cane. In fome parts, the foil is mixed with a coarfe rubble, fwept by heavy torrents from the gullies. This foil requires plentiful rains (without which it is apt to burn the canes), and conftant manure. One of the Oliverian regiments firft fettled here, under the command of colonel Archbould and major Hope, who, with Sir William Beefton, poffeffed the beft and largeft fhare of this whole tract. Few of the fugar-plantations are remoter from the harbour than fix or feven miles; the interior or hilly part being chiefly employed in the cultivation of coffee and provifions. The roads here are in general firm; the fugar of excellent quality; and the carriage to and from the town fo eafy, that the eftates are juftly efteemed very valuable. The Long Mountain, which runs obliquely from Rock Fort for about four miles inland, is for the moft part compofed of lime-ftone. The end of it, which advances neareft to the harbour, fupplies large quantities of ballaft for the Vol. II.
fhips, ftones for building and for lime; which are carried by water from the foot of it. But the houfes in general are of brick manufactured from the natural foil, which is a certain proof of its fertile quality.

Near Merryman's Hill, in Liguanea, a mineral water has, not long fince, been difcovered; which is faid to contain a vitriolic acid iron, a portion of talky, argillaceous, and abforbent earths, joined to a fixed foffile alkali. Dr. Richardfon, who tried fome experiments upon it, acknowledges, however, that this analyfis is incomplete, and requires further experiments, which cannot be made, except at the fountain head. This is commonly known at prefent by the name of Curtin's Spring, and probably contains a very medicinal quality; for which reafon, a more perfect analyfis is extremely defireable, for afcertaining all its ingredients.

State of the Parifh:
Annual Produce of Sugar.
Negroes. Cattle. Sugar-eftates. I Hogheads. I Other Settlements.

This parifh is in a flourifhing ftate, and increafing in its number of fugar-plantations, though not fo rapidly as might have been expected, confidering its vicinity to Kington. This fupinenefs may be attributed to the abfence of the chief proprietors, who refide in the mother-country, and are not folicitous about forming new eftates, which require fome money to be advanced, and perhaps the perfonal fuperintendency of the owners. The diminution in cattle has (among other caufes) proceeded from the erecting of feveral water-mills, which have rendered a lefs number neceffary. The whole ifland, indeed, has owed much of its prefent improved ftate to the extenfive introduction of thefe ufeful machines.

SECT.

S E. C T. III.

## PORTROYAL.

THIS parifh is bounded on the Eaft, by St. David; on the Weft, by the port, and St. Andrew; North, by Kingiton harbour, and St. David; and South, by the fhip channel, and fea. A part of Yallahs River forms the inland confine on the North; as the Bull Bay River does on the Eaft. It is watered alfo by the Hope, and Mammee. The town, which is in $17^{\circ} 57^{\prime}$ North latitude, and $76^{\circ} 37^{\prime}$ longitude Weft from London, is fituated on the point of a peninfula, or narrow neck of land, called the Palifadoe, which, projecting from the main land about eight miles and three quarters, forms a barrier to the harbour of Kingfton againft the fea. The foundation of it was firft laid by general Brayne, in the year $1657^{\circ}$ It was then called Cagua, or Cagway, a corruption probably of caragua, the Indian name for the coratoe, or great aloe, which overfpreads the adjacent Saltpan Hill. The excellent anchorage in the road, where a thoufand fhips might lie fecure from all winds except hurricanes, and the depth of water, infomuch that the largeft veffels ufed to lay their broadfides to the wharfs, and load or unload with little trouble, made it fo defireable a feat for trade, that it foon became celebrated for the number of its inhabitants, the extent of its commerce, and amazing treafures of gold and filver. In the year 1672 , it contained eight hundred well-built houfes, moft of which were rented as high as any of that time in the heart of the city of London. Twenty years after this, the number was increafed to two thoufand; and it had then attained the height of its fplendor. The fituation was extremely incommodious in many refpects. It had neither earth, wood, nor water; the foil was nothing more than a loofe fand, lodged at firft upon a ridge of rock, and gradually extended in breadth, as well as depth, in a long feries of time, by the renditions of the fea. The natural wants, however, of fo large and populous a town, proved very inftrumental towards forming and encouraging plantations upon the

140

## J A M A I C A.

main land. The demand for fire-wood, building-timber, bricks, flefh, corn, fruits, and other vegetable provifions, was confiderable; and this was fupplied by the fettlers in St. Catharine and St. Andrew. The advantage of trade to an infant-colony, and the mutual dependence of the merchant and planter one upon the other, were never more confpicuous than in this example. The town was inhabited by fcarcely any other than merchants, warehoufekeepers, vintners, and retailers of punch; the latter were very numerous, and well fupported by the buccaneers, who diffipated here whatever they got from the Spaniards. As an infance of their profufion, it is faid, that one of them has been known to fquander three thoufand pieces of eight, equal to $750 \%$ of prefent currency, in lefs than a month. The immenfe riches they brought into this town, the grand treafury of all their fpoil, may partly be judged by the fums which the armament, under Sir Henry Morgan only, is faid to have brought in during 1669 and 1670 , viz.
On the capture of Puerto del Principe, - 50,000 pieces of eight.
Puerto Vela, - - 250,000
Maracaibo, - - 250,000

Panama and Cruz, - 400,000
In all, 950,000 or $f_{0} \cdot 237,500$ beffdes an immenfe quantity of filks, linens, gold and filver lace, plate, jewels, and other valuable commodities; which probably amounted to near as much more. By this means (as an hiftorian has obferved) money grew to be in vaft plenty, and returns eafy to England, into which many hundred thoufand of thofe pieces of eight were imported. A fhare of thefe acquifitions, however, remained in circulation among the planters, who by this time brought their manufactures of fugar and indigo to great perfection. Their other commodities for export were, ginger, anotto, cacao, cotton, and pimento; fuftick, mahogany, and lignum vita. All their goods were fhipped at Port Royal; and, by an act of affembly paffed in 1683 , all productions of this fort, that were levied on for payment of debts, were directed to be appraifed in that town by the church-wardens, upon their oaths, and then delivered to the creditor, who was obliged to accept them at the appraifed value,

## BOOK II, CHAP. Vili.

as fo much money. This law, fo favourable to the planters, was likewife highly beneficial to the mother-country, by its confidering the foreign money then current here as mere merchandize, and of courfe leaving it free for exportation to England.

I am now about to defcribe the fad reverfe of fortune which this rown experienced; but, firft, it may not be improper to mention the ftate of it in the beginning of the fatal year 1692 . It contained at that period upwards of three thoufand five hundred inhabitants, and two thoufand houfes; the greater number of which were of brick, feveral ftories in height, founded clofe to the very brink of the water, on a loofe bank of fand. The fort, which then mounted fixty pieces of ordnance, and the reft of the houfes, were founded on the rocky part of the peninfula. On the 7 th of June, 1692 , between eleven and twelve o'clock at noon, began that terrible earthquake which, in two minutes time, produced fuch a fcene of devaftation $[x]$. All the principal ftreets, which were next to the water, funk at once, with the people in them; and a high, rolling fea followed, clofing immediately over them. Not lefs than fixteen hundred were thus fwallowed up, or fhook into an
[x] The year began with very hot, dry weather, which continued till May, when there was much blowing-weather, and a great deal of rain, till the end of the month; from which time, till the earthquake happened, it was exceffively calm, hot, and dry. The 7 th of June was a very hot, clear fun-fhine day, fcarce a cloud appearing, and not a breath of air felt. The earthquake began at forty minutes pafteleven A.M. with a very fmall trembling. The fecond fhake was fomewhat ftronger, accompanied all the while with a hollow, rumbling noife; and, inmediately after this fecond fhake, came on the third, and moft violent, which continued near a minute.

When Venables took the ifland, the point whereon Port Royal now ftands was almoft infulated, being joined to the Palifadoes only by a ridge of fand, which at that time juft began to appear above water. When-Jackfon invaded St. Jago de la Vega, which was about feventeen years antecedent, it was entirely feparated by the fea. On this fandy ifthmus, which the inhabitants enlarged by driving piles, wharfing, \&c. the greater part of the town was built, extending above a quarter of a mile; and the weight of fo many large brick-houfes was juftly imagined to contrìbute, in a great meafure, to their downfall; for the ground gave way as far as the houfes erected on this fandy foundation flood, and no further.

So in the great earthquake which happened in Sicily in the following year, 1693 , it was obferved, that in lefs folid ground, as chalk, fand, or loofe earth, the mifchief was beyond comparifon greater than in rocky places: And, in Syracufe, the difference was wifible in three places; that is, in the middle of the city ; in the little ifland; and in Zaracatt, where the antient Syracufa ftood; in all which places, the buildings, being on a rocky foundation, remained for the moft part untouched, or only fhaken, or at leaft not quite demolifhed : whereas, on the contrary, in the reft of that territory; which is not rocky, a vaft number of noble ftruetures and towers lay in a heap of ruins.
heap of rubbifh. Some of the frreets were laid feveral fathoms under water; and it ftood as high as the upper rooms of fome houfes which remained. It was computed, that about two thoufand Whites and Negroes perifhed in this towu alone. The harbour had all the appearance of agitation as in a ftorm; and the huge waves rolled with fuch violence, as to frap the cables of the fhips, drive fome from their anchors, and overfet others. Among the reft, the Swan frigate, that lay by the wharf to careen, was forced over the tops of the funken houfes, and providentially enabled fome hundreds of the inhabitants to fave their lives. The fort only, and about two hundred houfes, efcaped without damage. But a part of the neck of land, communicating from the point to the Palifadoes, about a quarter of a mile in length, was entirely fubmerfed, with all the houfes, which food very thick upon it. The water forced its paffige through the Saltpond Hill and gufhed in torrents from its fide, at an elevation of twenty, and in fome places thirty feet above its bafe, and continued rumning for feveral hours afterwards. The mountains on each fide the river-road, leading from Spanifh Town to Sixteen-mile-walk, were thrown down in fuch heaps, as to obftruct the paffage of the river, and for fome time to prevent all communication between thefe two places. A great part of a rocky mountain in St. David's fell down, and buried a whole plantation lying at the foot of it. The part from which this huge fragment was detached is now a precipice of folid rock, confpicuous from its height at a great diftance, and remains a dreadful monument of that day's cataftrophe.

The fhock was not lefs violent in the mountains. Some were even of opinion, that they had funk a little; others, that the whole ifland had fomewhat fubfided; for they obferved, that feveral wells in Liguanea did not require fo long a rope, by two or three feet, as they did before the earthquake. However, it is more natural to account for this change, by fuppofing, that the water had rifen higher; for, in all thefe violent commotions of the earth, it is well known, that fprings are remarkably affected. At the North fide, above one thoufand acres of land are faid to have funk, with thirteen inhabitants. It left not a houfe ftanding at Paffage Fort ; only one at Liguanea; defroyed moft of the planters habitations

## BOOK II. CHAP. VIII.

in the country; and all in St. Jago de la Vega, except what were built by the Spaniards. During thefe convulfions, which continued with little intermiffion, though in a flighter degree, for fome weeks afterwards, the moft offenfive ftenches were emitted from every fiffure and opening made in the fand near the harbour; the fky became dull and reddifh, which indicated a plentiful difcharge of vapours from the earth; the weather grew hotter than had been obferved before the fhock; and fuch prodigious fwarms of mufkeetos infefted the coafts, as to aftonifh the inhabitants; the beauty of the mountains was quite effaced, and, inftead of their lively, youthful verdure, they appeared diftorted with fragments, bald, and furrowed.

After this fatality, many of the inhabitants, who had furvived the lofs of Port Royal, removed to that part of Liguanea where King fton now fands. Here they took refuge in miferable huts, which could not defend them from the rain. . Thus deftitute of fuitable conveniences and medicines, they foon perifhed with ma. lignant fevers. The air, empoifoned with noxious vapours, cooperating with the terror of thefe calamities, and the diftrefs they occafioned, brought on a general ficknefs, which very few efcaped in any part of the ifland. Not lefs than three thoufand are computed to have died; the greater part at Kingfon only, where five hundred graves were dug in a month's time, and two or three buried in a grave. What rendered the fcene more tragical were the numbers of dead bodies which, after perimhing in the fhock at Port Royal, were feen in hundreds floating from one fide of the harbour to the other. Thus fell the glory of Port Royal; and with it all the publick records; which proved a heavy lofs. In the following year, the affembly taking into confideration, that the fort and many of the houfes were ftill left ftanding; that it was a place fo excellently adapted to carry on trade, and of great ftrength to refift an enemy; refolved upon rebuilding it. Firft, however, they endeavoured to fhew the deep impreffion which the late misfortune had made upon their minds, by appointing every 7 th of June to be obferved, for the future, as a day of fafting and deprecation of the divine wrath; which ftill continues, and ever ought, to be religioufly kept here. The fand on the South fide of the town

144 J A M A I C A.
was funk fo low, that it was feared the fea would encroach too faft, and endanger the houfes left ftanding on that fide. They therefore enacted that the owners of ground formerly built upon, and whofe houfes had been thrown down by the earthquake, fhould rebuild them; or, otherwife, that the lots fhould be fold on a fair valuation, and the money be paid to the owners. Some provifions were like. wife made for repairing the wall, or breaftwork, which had been built to hinder the encroachment of the fea; and the receiver-general, fecretary, and port officers, were ordered to hold their offices here, by themfelves or deputies, as heretofore.

By degrees, as the popular fears fubfided, the town increafed in buildings and inhabitants, though far fhort of its former fate, till the year $1 \% 03$, when it was deftroyed a fecond time. A terrible fire broke out among fome of the ware-houfes, which fpread with fuch fury, as to reduce moft of the houfes to athes. It was occafioned, as appears, from an act paffed foon after, by keeping large quantities of gun-powder, and other combuftibles, in the different quarters of the town; and its devaftation was imputed to the Northward fhingles, with which the houfes were covered. This accident produced the law, which enacts, that, as the North-American fhingles had been found very dangerous, no perfon, inhabiting in this town, fhould for the future cover any houfe, or other building, with any fhingles brought from the Northward, nor any other than what are made and produced in this ifland, under penalty of forfeiting $100 \%$ and fuch houfe or building : a regulation fo prudent, that it is amazing it has not been extended to Kingfton, and other towns where it is equally neceffary. This ruinous accident caufed another defertion to Kingfton; which thus began to thrive by the decline of her elder fifter; fo that, two years afterwards, it was grown fo populous, that the legiflature found it convenient to eftablifh here a quarter-feffion, and court of common-pleas, and to enact feveral provifions for fecuring the navigation of the harbour, fettling the rates of wharfage, repairing the ftreets, and guarding againft fire. Port Royal was at this period reduced to a very low ebb, yet it was not wholly deferted. It was thought advifeable to keep it provided always with a ftrong garrifon. It ftill poffeffed fome little trade, and was the favourite

## BOOK II. CHAP. VIII.

refort of the feamen belonging to the men of war and privateers. But, as if Providence had decreed that it fhould never more revive to any thing like its former fplendor, what the earthquake and conflagration had fpared was nearly demolihed by a violent hurricane, which happened on the 28th of Auguft, 1722. It began at eight in the morning, and lafted fourteen hours; during which, the rain was inceffant, and the ftorm veered all round the compafs. In Kingfton moft of the buildings were thrown down, or much thattered. The very day preceding it was perfectly calm; but fo great a fwell at fea, that the waves broke over the breaft-work at Port Royal, and laid all the ftreets under water. The fort fuffered very much; feveral of the guns were difmounted, and fome wathed into the fea. The church and row of houfes in the Eaft part of the town were fo battered, that there remained very little appearance of a building. In fhort, above half the town was laid in ruins; and the houfes and plantations in all parts of the ifland fuffered confiderable damage, except in St. Jago, where the Spanifh buildings food the fhock unhurt. Very few of the inhabitants loft their lives; but in the harbour it proved more fatal. Out of thirty-fix merchant-fhips and floops, only ten were to be feen after the ftorm; and of thefe one half were irreparably damaged. The Falkland, Swallow, and Weymouth men of war, and the floop Happy, loft all their mafts and boats; the other part of the fquadron, confifting of the Lancafter, Mermaid, and Adventure, were luckily at fea, and efcaped. The naval ftore-houfe was blown down; and moft of the powder in the magazines damaged. The Rio Cobre was obftructed for feveral miles about the Caymana's, and loft its ufual channel, by the prodigious abundance of trees and rubbifh which the wind and inundation had thrown into it; fo that the paffage from St. Jago to Kingfton by land became interrupted for fome time; and the affembly were obliged to pafs an act for clearing it. It was computed, that four hundred perfons lof their lives in the harbour, among which were two hundred Negroe flaves on board a Guiney fhip, which foundered at her auchors. In 1717, the affembly, being fenfible that the wall, or breaft-work, on the South fide of the town was of the utmoft importance to prevent the fea from breaking in, eftablifhed $\mathbf{1 5 0}$. per ammint as a per-

Voz. II.

146 J A M A I C A.
petual fund for keeping it in repair. They had, fome time before, prohibited the carrying away any fones or fand from the cayes and thoals which lay in the chamel, with a view to the like precaution; which was fufficiently juftified in the year 1744, when another furious hurricane arofe at fix in the evening on the 20th of October, and continued till fix the following morning. A new fort, begun at Mofquito Point, was entirely razed; many houfes were blown down in the towns and other parts of the illand; and all the wharfs at Port Royal, Kingfton, Paffage Fort, and Old Harbour, were deftroyed, and moft of the goods fwept away. The inhabitants of Port Royal expected every moment to be fivallowed up by an inundation, the ftreets being all laid feveral feet under water; but, happily, their wall withftood the Shock, and faved them from utter Euin. Their dangerous fituation may be imagined; for the wind, fetting the whole time from the South, drove the furge full againft this part of the town, and with fuch fury, that immenfe loads of ftone and fand were poured over the wall. Sir Chaloner Ogle, who then had the command on this fation, was fortunately at fea, with the major part of the fleet; but there were nine men of war and ninety-fix merchant fhips in the harbour, one hundred and four of which were ftranded, wrecked, or foundered; fo that only the Rippon rode it out with the lofs of her mafts; and a great number of mariners were drowned. Thus has this unhappy town undergone, in the fpace of fifty-two years, a fad fucceffion of extraordinary difatters, by earthquake, tempeft, fire, and inundation. In its prefent humbled condition, it has three ftreets, two or three lanes, and about two hundred houfes. The fortification, called Fort Charles, ftands on a low fpot at the entrance or mouth of the harbour, and is defended by one hundred and twenty-fix guns. The breaft-work, or line, is alfo formed to guard the channel in coming in, as well as to prevent any accefs by the Palifadoe or land-fide; fo that it is now compleatly fortified. Within the fort is a fmall powder-magazine, and a houfe for the commanding officer. The barracks are capable of receiving upwards of three hundred men, exclufive of their officers; and here is a hofpital for their fick. In 1734, when Sir Chaloner Ogle commanded the iquadron here, a large piece of ground was taken in at the North-

## BOOK II. CHAP. VIII.

Eaft quarter of the town, and vefted in the crown, for the fervice of his majefty's fhips; and in 1741 the yard and wharf were greatly enlarged by an act of aftembly, paffed for that purpofe. Here the men of war are careened and refitted; but the greater part of the naval ftores are kept in proper ware-houfes at Greenwich. The hofpital for the feamen is a large, airy, and well-contrived building. The church is a fmall, but neat ftructure, with an organ, a tower, and cupola. The captain of the fort has of late years been appointed by the governor's warrant, upon the nomination of the miniftry. His falary is only $109 \%$ ios. per annum; but the profits of this poft make it far more confiderable. By the re-venue-law, paffed in 1728, a provifion is made of 547 l . 10 s. per annum for twelve matroffes and gumers, who are required to be inhabitants of the town, and continually refident in it. The holding thefe employments is an excufe from fervice as peaceofficers, jury-men, or in the militia; and for this reafon, the inhabitants make ftrong intereft to obtain warrants of appointment to thefe merely nominal commifions, for they gladly relinquifh their claim to the falary, which of courfe becomes a perquifite to the captain. A practice, very detrimental to trade, was formerly in ufe here; I mean the demand of a gratuity from the mafters of veffels, importing bullion from foreign parts, for leave to pafs the fort: this, with exactions of the like nature from the governors, naval officers, \&c. became fo grievous, that thefe foreignets at length declared it to be the principal reafon of their abandoning all further trade at this port, and of their refort to the French at Hifpaniola, where they are faid to have met with a more favourable reception, and to have made up their affortments full as cheap. Rapacious ads commonly begin at the top in thefe difant governments, and fo defcend to the loweft underftrappers.
It was unpleafing to fee the intereft of a colony thus made a facrifice to the bafeft principle; and more fo, that the injured people either had not, or were not able to exert, a fuitable remedy. But fuch as a governor is, fuch will be the fubordinate minifters within his jurifdiction. The captain of the fort takes charge of all the powder brought into the magazine purfuant to the tonnage-act, and accounts, upon oath, for its wafte and expenditure, to the

## 148 J A M A I C A.

council and affembly when called upon; fubject, in cafe of negleet or refufal, to a penalty of $500 \%$. The profits of this pof have been computed at not lefs than $1000 \%$. fterling per anmum. The expence of keeping this fort, and the barracks at Port Royal, in repair, from 1743 to 1752 , paid by the public of Jamaica, amounted to $27,667 \%$ which is about $3074 \%$ per annum. The powder ordinarily in the magazine is about $20,500 \mathrm{lb}$.wt. and all that it is not capable of containing is lodged at Mofquito Point, and Rock Fort.
The quantity confumed in falutes, minute-guns, re-joicing-days, and a morning and evening-watch, is, communibus cmnis, about - - 256001 l.wt.
The walte, in fifting and fhifting, about - 3000

$$
28600
$$

which, at eighteen-pence per pound (the price at which it is rated on being paid in), comes to $2145 \%$. a charge which might be leffened, and the faving better applied to the article of repairs.
Thefe falutes, \&c. have ufually been regulated in the following manner :

On the death of the governor, admiral, or the governor's
Ditto of the king's uncle or aunt, - - 44
King's birth-day, - - ${ }^{2} 7$
Death of the king's brother, or fifter ; birth-day of any of the royal family, except the king's; on arrival or departure of a governor; on his vifiting or leaving the fort; on publifhing his commiffion; commiffioners of the forts vifiting, and leaving ; gun-powder plot;
St. George's day; and other publick holidays;
27
Salute of an admiral's flag, - $\quad 15$
Ditto a privy-counfellor of the ifland arriving, - $\quad 14$
Ditto ditto leaving the ifland; - 13
An exact account of all the powder brought in every year to this fort, and the out-ports, would give a tolerably accurate detail of the tomnage of fhipping employed in the trade of this ifland; it

## BOOK II. CHAP. VIII.

would probably be rather under that over the truth, as their regifters feldom correfpond with exact menfuration.

The powder, expended at Fort Augufta, on Mofquito Point, is, one year with another, about 7000 lb .int value $525 \%$.

In the year 1760, the quautity of powder received at Fort Charles amounted to three hundred and nine barrels, of 100 lb .wt. each $,=30,000 \mathrm{lb}$.wt. which makes the tomage of that year, of the fhips that come to Kingfon harbour, thirty thoufand nine hundred; and, fuppofing feventy tons each to be an average, the number will be four hundred and forty-one fhips and fmaller veffels [ $y$ ?
For the fervice of the forts feveral Negroes are allotted; and by the laft account there were,

and proper canoes, either for going with difpatches, or bringing provifions from Kingीon marker, \&c. The inhabitants are chiefly fupported by the money fpent here by the garrifon and the fquadron; by the gains made by their wherries that ply for fare in the harbour; their turtle-fifhery, which is confiderable; the pilotage of thips in and out; and by their votes at the election of reprefentatives; though it muft be confeffed, that, except when party-feuds run very high in the iffand, their profits in this laft article are but trifling: however, many perfons are proprictors of houfes in this rown, merely for the advantage of voting at thefe elections; in the mean time letting them rent-free, on condition only, that the tenant keeps them in tolerable repair.

Befides thefe douceurs, one inhabitant receives $400 \%$ a year for fupplying the fort and the garrifon at Mofquito Point with frefh

[^11]
## J A M A 1 C A.

watcr, brought in boats from the river Cobre; and another is paid 100\% annually, for giving a dinner to the committee of the legiflature, who come hither to view the fate of this fortrefs. Sometimes they have obtained a partial exemption from certain taxes; and, confidering the veneration and compaftion due to the town on account of its antient grandeur and prefent poverty, there feems to be juft ground for thefe eleemofynary benefactions. The air of the town has been always efteemed remarkably healthful. It is open to a free ventilation ; and the wind is corrected by pafing in every direction over the fea-water. In the middle of the day it is geneally very hot; for the heat of the air is greatly augmented by the iand, which retains it like a balneum mario. But rain rarely falls here. The clouds from the land have a quick drift out to fea, after being blown over the Blue Mountains; and thofe that approach from the fea generally follow the monntainous ridges, and thus are drawn away from this quarter. The imbabitants in general live to a great age; and many convalefcents repair hither from other parts of the ifland, to recruit their emaciated bodies with the purity of this atmofphere, and a regular courfe of turtle-diet, which is cooked here in the higheft perfection. The civil government of the town is, like the others, under the difpenfation of a cufos, or chief magittrate, and his affiftants, with other peace-officers. It has alfo a quarter-fffion of the peace, and court of common-pleas, and mufters a fmall corps of militia. The rector's ftipend is 250 . per annum; and, all perquifites included, does not amount to more than about 300 l . as I am informed.

Port Royal, as a place of defence, is defervedly valued. The fhips, in advancing towards the harbour, muft neceffarily pafs, between fhoals and rocks, through a difficult channel, in fome parts extremely narrow; and are inevitably expofed to a fevere fire, without poffibility of bringing their guns to bear. A-head they have a battery of twelve guns, moftly forty-two pounders, called the Twelve Apoftles, built on a point of Saltpan Hill (above the range of an enemy's fhot), which would rake them the whole way, till they tacked to ftand up the harbour: they are then expofed to the fire of this battery on one fide, to the fire of the fort on the other,

## BOOK II. CHAP. VHI.

and in front to the battery of Fort Augufta. The harbour is about one mile and three quarters in breadth, but widens further-in.
The men of war anchor near the town in eight and ten fathom water. Fort Augufta ftands on Mofquito Point, which is a fandy peninfula, about two miles in length, and very narrow, projecting from the North-Eaft fide of the Saltpan Hill, and forming a kind of lunette on the Weff fide of the harbour. At the point, the fhipchannel between the harbours of Port Royal and Kingfton is not a quarter of a mile in breadth, and would probably become fhoalwater, if it was not for the Rio Cobre, which fweeps through it to the fea. The channel has from fix to eight fathom; but on each fide of it are fand-banks, in paffing over which, the fmall wherries fometimes rub their keels. This fort mounts eighty-fix large guns, kept in excellent order. It contains a large magazine, a houfe for the commandant, barracks to contain three hundred foldiers, with all convenient offices, and cafemates. It was projected to mount one hundred and fixteen guns; but it is not yet compleated. The walls and baftions are built upon piles of the palmeto or thatch-pole tree, which is endued with the property of lafting in water without being liable to erofion by the worm. Thefe were driven down through the loofe fand, until they reached a firmbed. If the fame precaution had been ufed in conftructing the houles of Port Royal, it is probable that the greater part of the town would have furvived the earthquake. This fort contains an hof ital, befides habitations for the officers, and is looked upon to be an healthy garrifon. The neck of fand which joins it to the main is not above fifty or fixty feet wide in moft places, and folow, that an enemy could not carry on approaches, on account of the water rifing near the furface ; and it is flanked by a lagoon, or inlet of water from the harbour, of fome extent; for thefe reafons, and becaufe the thips, in paffing up the channel towards Kingfon, muft come within point-blank fhot of a whole line of guns, a governor of this ifland pronounced it impregnable both by land and fea. The fort is about two miles diftant from Port Royal, and about three and a half from Kingfton.

The broadert part of Port Royal peninmula is nearly oppofite to the Eaft quarter of Kingfon: on this part is a fmall grafs-penn, ftocked with ineep and goats. The file next the harbour is interfected with feveral little ponds and inlets; and here is the ufual careening-place for merchant-hhips. This neck of land might be made very paffable for horfes; but the people of Port Royal prefer a water-carriage, which is more pleafant, and equally expeditious. Leaving this maritime part of the parifh, I thall proceed to the other difuitt of it, which lies on the main land. It contains about fifteen thoufand acres, but very few fettlements or inhabitants; for the more level part bordering on the coaft is parched, for want of rain; and the reff is occupied with fleep mountains. Near the road, which leads acrofs this parih from the Eaftward to Kingfton, ftands the antient habitation of Sir James de Caftillo, a Spaaith gentleman; who was knighted by king William III. for his fervices in negociatiug a treaty, to furnifh the Spanifh dominions in the Weft-Indies with an annual number of Negroes, by the way of Jamaica [z]. This houfe was defended by feveral fwivelguns, ranged on poits before the front; its fituation near the Bull Bay fubjecting it in war-time to the danger of being attacked by the privateers, which frequently have made defcents on this part of the country.

There is nothing further in the parifh that merits notice, except the cafcade at Mammee River. This ftream takes its rife among the Blue Mountains; and, after a winding courfe, difcharges itfelf between two rocky hills near Bull Bay, by a fall of about two hundred feet. The direction of the fall is altered, midway, by a vaft rock, extending from the fide of the adjacent precipice, which breaks the Cheet of water, and caufes it to be agitated with fuch violence, that the face below is filled with a continual mift; which, fo long as the fun thines upon it, exhibits a beautiful variety of fine irides: from thence the river rufhes, foaming along between rocks, till it reaches the open ground below. Under the brow of the Eaftern hill, above the fall, is a very large and curious cave, filled, like all the others that I have feen in this ifland, with

[^12]
## BOOK II. CHAP. VIII.

ftalactic petrifactions. In many parts of the mountains are found fimilar cavities, fome of which have adits defcending a very great. depth into the earth. It is poffible, they may have been originally formed by earthquakes; yet, to judge from the appearance of moft of them, they appear coeval with the illand itfelf. On going into one of thefe in the middle of the day to the depth of about forty feet, the air, or vapour, grew fo hot and fuffocating, that it was impoffible to proceed any lower. Thefe chafms, perhaps, have a very extenfive fubterraneous communication; and, whenever the external air is highly rarefied, the vapours rufh upwards through the aperture in a continued fream; on the contrary, when the external air is in a different ftate, it probably defcends with fome violence into thefe openings: at certain times therefore, as for example in the early morning-hours, it may be practicable to go down very low into them without inconvenience or danger. In moft of them are found large quantities of human bones, almoft confumed by time, the teeth alone being in a tolerably perfect fate. Some have conjectured, that thefe places were either ufed by the Indians as offuaries, or elfe as occafional retreats, to elude the fearch of an enemy. The moft probable account is, that the bones belonged to thofe poor Indian natives who fell victims to the barbarity of their Spanifh conquerors; for Efquemeling, who wrote in J 666 , and had feen great quantities of human bones lying in caves in the ifland of Hifpaniola, tells us he was informed, by the inhabitants of that ifland, that, when the Spaniards had refolved upon the extirpation of the Indians, they made ufe of dogs of a peculiar breed, large, bold, and very fleet. The poor Indians having for fome time been obliged to take refuge in their woods, thefe animals were conftantly employed to hunt them out. The Spaniards by this means caught a great number of them; and were content at firft to kill feveral, quartering their bodies, and fixing their limbs on the moft confpicuous fpots in terrorem, that the reft might take warning by their fate, and fubmit at difcretion. But this horrid cruelty, inftead of intimidating or reducing to friendly terms, only ferved to embitter them more againft their favage invaders, and affected them with fo inveterate an abhorrence of the Spaniards, that they determined to fly their fight for ever, and rather perifh by Vol. II. famine

## 154

## J A M A I C A.

famine or their own hands, than fall into the power of fo mercilefs an enemy. The greater part of them therefore retired into caves and fubterraneous privacies among the mountains; where they miferably perifhed, leaving a fad, though glorious, monument to future ages, of their having difdained to furvive the lofs of liberty and their country.

State of Port Royal Parifh :
Annual Produce
of Sugar.
Negroes. Cattle. Sugar-works. | Hogheads. | Settements.

| 1734, | 1548 | 106 |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: |
| 1740, | 1546 | 158 |  |  |  |
| 1745, | 1685 | 35 |  |  |  |
| 1761, | 1203 |  | 170 | 1 | 60 |

We have here a glaring proof, that this patifh is declining very faft, and perhaps irreparably; fince there appear no means of putting the town into a more thriving way; and the inland part of the parifh is too rugged or fteep to admit of any confiderablefettlements, while the tract adjacent to the coaft is rather fterile, and deftitute of a good thipping-place. The only barquadier is near the mouth of Bull River, where none but fmall veffils can lie; and the anchorage is unfafe, on account of the opennefs of the bay.

> S E C T. IV.

St. David, in the Precinct of St. Thomas in the East.
THIS parih is bounded on the Eaft, by St. Thomas in the Eaft, and a part of Portland; on the Weft, by Port Royal parifh, and a fmall part of St. Andrew ; on the North, by St. George; and on the South, by the fea. It is watered by fix rivers, the principal of which are, Collier's, Vavafor's, and Yallah's. The latter takes its firft fource in the Blue Mountains, and, after a meandring courfe of twenty-five miles, falls into the bay of the fame name, a fmall diftance from the difcharge of the others. This parifh was formerly populous: in the year 1673 it contained eighty

## BOOK II. CHAP. VIII.

eighty fettements ; but the lofs of regular feafons occafioned its defertion. The hamlet at Yallah's Bay confints of a few fcattered houfes, near the church, which is a very fmall building, though large enough for the parifhioners; the rector's ftipend $100 \%$ per annum. The fhipping-places are, Yaliah's Bay, and Cow Bay. At the former, there is anchorage for large fhips; but at the latter only fimall veffels can lie. Yallah's Bay is theltered from the breezes and Norths by a point of land. But no fhipping can lie with fafety at either of thefe places in a ftrong Southerly wind; on account of the prodigious fwell which fets in. Cow Bay is remarkable for having been the fcene of an extraordinary action in the year 1681; when Sir Henry Margan, the governor, having intelligence that one Everfon, a famous Dutch pirate, rid there with a floop and a barqua longa, manned with about one hundred defperate fellows, difpatched a floop with fifty men, befides officers, in queft of him. On the firft of February the governor's armed veffel attacked the pirate, and after fome refiftance, in which the Dutch captain was killed, got poffeffion of the floop. The bark cut her cable, and efcaped by outfailing her purfuer. The piratical crew, who were almoft all of them Englifh, Sir Henry fent to the governor of Carthagena, to receive punifhment for all the outrages they had committed upon the Spaniards. In this he was thought by fome to have gone too far; but he was willing perhaps to convince the Spaniards, by this facrifice, that he knew how to diftinguifh between hoftilities carried on under a lawful commiffion, and acts of lawlefs piracy; and that he was determined to keep the treaty with the Spaniards inviolate on his part. In 1694, twelve fail of the fleet, under command of Du Caffe, anchored in this bay, landed their men, and plundered and burnt all before them, for feveral miles; killed the cattle; drove whole flocks of theep into houfes, and then fired them. They put feveral of the prifoners they took to torture, murdered others in cold blood, and committed the moft fhocking barbarities. Some days afterwards, feveral of the fleet being forced out to fea by the violence of the wind, which drove their anchors home, the commanding officer of the militia in this quarter fell npon their ftraggling parties on fhore, flew many of them, and forced the reft to take fhelter on
board their fhips, leaving their provifions behind. Soon after this action, they failed away.
This coaft was always much expofed to the infult of privateers, until the laft war; when a finall frigate was ftationed at Morant to windward, which being only five leagues from Cow Bay, it would be very difficult for an enemy's veffel to efcape after making a defcent. This pariifh has three large ponds on the coart, divided from the fea only by a very narrow, fandy bank, fo that the waters communicate. Two of them are fituated in the South-Eaff fide, between White River and Yallah's Bay; the larger is two miles and a quarter in length, and three quarters in breadth in the wideft part; a very narrow flip feparates this from the next, which is about a mile in length. Thefe were antiently pans, formed by the Englifh who firft fettled in the parifh, for making falt. They were probably afterwards deftroyed by inundations of the fea in the great earthquake and fubfequent hurricanes; and they have now a confiderable depth of water in fome places. The third lies about two miles Weft of thefe, and is about one mile in length, and of unequal breadth. If the parifh was crouded with fettlements, thefe bafons might be converted to fome advantageous fcheme, either for maintaining a filhery, or opening a water-carriage from the Eaftern part to Yallah's Bay; which would be extremely feafible. The lower or more level range of the parifh, lying between the hills and the fea, was, by the failure of the regular feafons, in general fo dry, that canes would not grow here; and the fettlements, thinly fcattered, confifted only of penns and fheep-paftures, until within thefe few years, when a gentleman who poffeffes a property here conceived the idea of watering it from the neighbouring river. The experiment anfwered much beyond his expectation: he foon covered his formerly parched land with the verdure of cane pieces, and has now, as I am informed, made a noble eltate of four hundred hogtheads per annum; the land proving moft amazingly fertile, infomuch that I have heard it afferted to have yielded him from three to four hogtheads per acre. This example may probably operate upon his neighbours; and, in procefs of time, St. David will in confequence become a populous and wealthy parifh. The air is efteemed healthy in all parts of it, except the neighbourhood

## B O OK II. C HAP. Vili.

 of the Saltponds, but, if the parifh hould ever be thick-fettled, the mangrove-trees, which confine the atmofphere on the fwampy borders of thefe ponds, will be cut down, or probably fome method fallen upon, to drain them. The glades between the hills are exceedingly fertile; and the air and water perfectly good.State of the Parifh:

|  |  |  |  | Annual produce of Sugar. |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $1734{ }^{\circ}$ | $\begin{aligned} & \text { Negroes. } \\ & 1540 \end{aligned}$ | Cattle. $1165$ | Sugar-works. | 1 Hogheads. 1 | Other Settiements. |
| 1740 , | $\pm 628$ | 1497 |  |  |  |
| 17.45 | 4365 | 1494 |  |  |  |

| 1768, | 2.316 | r667 | 8 | 550 | 35 |

This parifh is evidently on the improving hand, having increafed both in number of Negroes and cattle. And it is to be hoped, the new fyftem of watering will pervade the lower quarter as far as may be practicable, that the greater part of that tract may be brought into cultivation

## SECT. V.

## St. Thomas in the East.

THIS delightful parifh is bounded on the South and Eaft by the fea; on the North, by Portland; and on the Weft, by St. David. It is plentifully watered by upwards of twenty rivers and fimaller ftreams: the principal are, the Negroe, the Morant, and Plantain Garden rivers; the laft-mentioned of which is navigable by fmall boats for a confiderable way up. This river fweeps through the parifh from Eaft to Weft in a meandring courfe of about twenty miles from its fource, which lies among the Blue Mountains : the other two crofs it from North to South, at the diftance of about half a mile from each other. Upon entering this parifh from St. David's, the land rifes on the coaft; and the road lies along fhore near a mile, paffing under two precipitous mountains, compofed of rocks, and frata of a light-coloured friable marle, intermixed with large pebbles. Thefe cliffs are feen
a great

## J A M A I C A.

a great diftance from the coaft, and called by feamen "The White Horfes." The furf fets in here very high upon the beach, and fometimes runs up quite to the foot of the cliff; but, in general, the fea is not fo boifterous as to prevent carriages from paffing. On leaving the thore, the road becomes hilly for mioft part of the way, till we come to Morant, which is about four miles to the Eaftward. The bay of Morant is a conficterable flipping-place. The road in which the frips anchor is well d feinded from the fea by a reef of rocks: the fhore is lined with itpres and sware-houfes at the bottom of a rifing ground, on which the village ftands, which confifts of about thinty houlcs, or mors, as it cemprehends within its circuit the church, which is not far diftant. This village is growing faft into a town, and indeed better deferves that appellation than fome others in the ifland: the church is a handfome building; and adjoining is the parfonage, an exceedingly comfortable manfion: the fipend annesed to this living is $250 \%$; but, confidering the extent of the parifh, the re\{or's income is probably not much fhort of from five to fix hundred pounds per amnum. There are feveral circumfances which feem to favour the growth of a town here. The foil is dry, the air healthy, and the water good and in great plenty ; the Eaftern branch of Morant River fall into the fea on one fide of the bay; and the country behind, and all around, is well-fettled and fertite. The flipping are defended by a fmall battery, kept in good repair. About five miles further Eaftward, the road brings us to Port Morant, which is one of the largeft and moft beautiful harbours in Jamaica. It runs up the country about two miles and a quarter; the entrance is about one mile acrofs; but the channel dangerous to ftrangers, on account of two reefs in the offing, which have proved fatal to feveral Thips. On the windward-fide, the land ranges pretty high, covered with thick wood; and, being fheltered on all fides by the main-land and the reefs, it is always fecure, and has a good depth of water. The entrance is defended by a fimall battery on the Eaft fide. The old fort was erected on the oppofite fide; but it was ill-conftructed, and efteemed not healthy [a]. It was in the neighbourhood of this

[^13]harbour

## BOOK II. CHAP. VIII.

159
harbour that governor Stokes fettled in 1656 , with his colony of Nevis planters. The governor fixed himfelf about two miles and a half from the head of the harbour, where the plantation, called Stokes-hall, ftill commemorates him. In 167 I , notwithfanding the mortality which had fwept off many of the firft planters, there were upwards of fixty fettlements in this neighbourhood; many of which formed a line along the coaft Eaftward from the harbour, where are only two or three at prefent. Point Morant, which is the Eafternmoft end of the ifland, is diftant between nine and ten miles from Morant Harbour. Adjacent to the Point are near eight thoufand acres of very fine land, moftly a rich, black mould upon a clay, at prefent in morafs, and therefore neglected ; but it is capable (by draining) of being converted into rich fugar-plantations; an example of which has been thewn in the Northern quarter of it, bordering upon Plantain Garden River, where an eftate, formed out of the morafs not many years fince by this mode of improvement, was lately fold for $105,000 \%$. and is thought to be well worth the money. . The draining of this large tract would anfwer the further good purpofe of rendering all the fettlements, that lie to leeward of it, more healthy; and in procefs of time this may probably be accomplifhed [b]. The road, continuing along the Weft fide of the harbour, and running Northwards about five miles, terminates at the town of Bath, which is forty-four miles diftant from Kingfon, and about fixty from Spanifh Town. The road from Kingfton was made partly by private fubfcription, and partly publick grants. As it paffes the whole way near the coaft, and through a variety of flourifhing fettlements, it is cheered with a number of moft agreeable profpects; and, to render it more commodious for travellers, there are mile-ftones fixed all along. Since the Bath has become a place of lefs refort than formerly, this road has been too much neglected. Some parts of it were formed

[^14]
## J A M A I C A.

with infinite labour, being carried along the fide of a lofty precipice of folid rock, which nothing but the force of gun-powder could penetrate. This pafs is very tremendous in a wheel carriage; from one fide of which, the eye is terrified by the view of a river foaming feveral hundred feet below ; but a parapet wall is built, for the fecurity of paffengers, where any danger may be apprehended.

The Bath waters have long been known, and juftly celebrated for their falutary virtues. They are faid to have been firft difcovered by colonel Stanton, formerly a planter and inhabitant of the parith, who was proprietor of the demefne in which they rife, and fold his right to the publick for a valuable confideration, paid him in purfuance of an act of affembly paffed in the year 1699. The diftance and trouble of coming at them prevented any experiment being made of their efficacy, till about the year 1696 , when two perfons, one of whom was greatly reduced by the belly-ach, the other by the venereal difeafe, had recourfe to them for a cure: they carried proper neceffaries with them; built huts; and, by the internal and external ufe of the hot fpring, they found their health re-eftablifhed in the fpace of only ten days. The water was foon afterwards tried in the prefence of the governor, Sir William Beefton, with an infufion of galls, which in twenty-four hours gave it the tincture of Canary-wine, or old-hock; a fufficient proof that it is not impregnated with chalybeate, or at leaft in a very fmall portion.

The hot fpring iffues by feveral different rills from fiffures in the fide of a rocky cliff, the foot of which is wafhed by the Sulphur River. The fpring is in fuch a fate of ebulition, when received immediately from the rock in a glafs, and applied to the lips, that it can only be fipped like tea. This has given occafion to fome dealers in the marvelous to affirm, that it is hot enough to boil chickens and even turkies. I have, indeed, been affured by men of veracity, that it will coagulate the white of an egg, if placed clofe to the fiffure, and held there for fome time covered from the air: and of this I have no doubt; for it is to be remarked, that at fome times it is heated to a far greater degree than at others, which depends probably on the greater or lefs effervefcence of the water within the bowels of the mountain from whence the fpring derives its fource. It is naturally light, fparkles when received in the

## BOOK II. CHAP. ViII.

glafs, ferments flightly with acids, turns filver black, and feems copioufly charged with volatile particles, combined with a phlogittic, a calcareous earth, and a portion of fixible air: it has a naufeous tafte when drunk at the rock; but this leaves it on being fome time kept. The face of the rock over which it flows is covered with an ochrous precipitation, impregnated with fulphur. It is remarkably beneficial in all capillary obftructions and diforders of the breaft, proceeding from weaknefs, or want of the proper glandular fecretions; in all lentors and vifcidities, proceeding from inaction; in confumptions, and nervous fpafins. It reftores the appetite, and natural action of the bowels; invigorates the circulation; warms the juices; opens the fkin; cleanfes the urinary paffages; ftrengthens the nerves; and feldom fails to procure an eafy fleep at night. Externally ufed, by way of a fomentation, it has been known to heal the moft obftinate ulcers. In paralytic complaints it is generally fucceefsful, and has recruited many conftitutions that were impaired by debauch, or lingering intermittents. Numerous as its known virtues are, it Aill requires a more thorough analyfis. Some other particulars likewife ought to be afcertained, in order to make it of more general ufe. But, of the different phyficians who have refided here, I know of none that has been at the pains to examine it fcientifically, or at leaft that has favoured the public with any difcovery of the principal purpofes to which it is applicable in mediciue, or of the methods by which it may be beft adminiftered, to anfwer the cure of difeafes; or of the fubftances proper to be ufed at the fame time with it. Thefe particulars are left at prefent to the difcretion of the patients, who drink it, for the moft part, with very little attention to rule or meafure; and therefore fome of them do not reap all the advantages from the ufe of it, which, under due regulation, it might be capable of producing. The general enquiries are,

1. What is the fitteft flate in which the water fhould be drank?
2. The quantity?
3. Time of the day?
4. Length of time proper for it to be continued:
5. Seafon of the year in which it is mofefficacious?

Vol. II.
Y
6. Regimen

## J A M A I C A.

6. Regimen of life, and diet, whilft under the courfe ?
7. What medicines preparatory to, or to cooperate with, the ufe of it [c]?
In general, it is drank immediately from the fpring, beginning with one half-pint glafs, and increafing the number to three or more. It has been found to have the beft effect taken on an empty ftomach early in the morning; but fome repeat the draught in the afternoon, befides taking a confiderable quantity, mixed with a little rum and fugar, by way of a diluent at dinner. All fruits and other acids are cautioufly abfained from, and vegetables fparingly indulged. The diet moft ufual confifts of fifh, black crabs, fowls, and the more delicate kinds of butchers meat, with puddings, and the like. At firft drinking, it diffufes a thrilling glow over the whole body; and the continued ufe enlivens the firits, and fometimes produces almoft the fame joyous effects as inebriation. On this account, fome notorious topers have quitted their claret for a while, and come hither, merely for the fake of a little variety in their practice of debauch, and to enjoy the fingular felicity of getting drunk with water. The cold fulphureous fpring, which rifes near Blue Mountain Valley, in this parifh, fome miles Weftward of the bath, is more grofs, and abundantly impregnated with fulphur, diftinguifhed by the foetor of its fmell and inflammable fediment. It is efteemed more effectual than the other in all cutaneous diforders, obftinate obffrutions in the bowels, the fcurvy, and all the other difpofitions of the juices that require ftrong lixivious difiolvents: for thefe reafons, in fome habits, it is recommended to fucceed a moderate courfe of the hot fpring ; but it is not much frequented, except by inhabitants of the neighbourhood. The mountains, between which the Sulphur River takes its courfe, deffend on each fide with fo precipitous a declivity, that it was found impracticable to build a town at the fpring; there is barely room to admit a bathing-houfe, and even this is inconveniently fituated on the fide oppofite the fpring ; fo that, before the water can be conveyed acrofs in a wooden gutter, laid from the rock to the bathing-houfe, it lofes much of its heat and volatile gas.
「c] See Falconer's treatife on the Bath-water of Somerfethire; which merits the perufal of any genteman who may inciine to try experiments on that of Jamaica.

## BOOK II. CHAP. VIII.

This could not be remedied, except by ufing an iron pipe, to conduct the water; for a building cannot be crected on the fame fide as the fpring, without being fo remote from it, either above or below, as to be liable to equal inconvenience. This is the cafe with refpect to a batling-houfe for paupers, built by the river's fide above the fpring by a teftamentary donation of Peter Valette, efq; which is at too great a diftance. This gentleman, having obferved with regret that many poor and fick white perfons, who had come from time to time to Bath for the benefit of the waters, either died, or fuffered greatly for want of fubfiftence, and the common neceffaries of life, devifed the fum of ro. $l$. per annum, payable during the term of ten years, from the time of his deceafe, towards the relief and fupport of fuch poor perfons, not being indented fervants, nor having any vifible way of maintaining themtelves, who might from time to time actually refide about the Bath-fpring; directing the phyfician there to deliver a weekly ftipend of 7 s .6 d . into the hands of all fuch objects of charity; or otherwife to lay out the fame for their ufe and benefit during the time of their refidence, not exceeding three months each: and, in cafe of any overplus remaining at the end of the year, he defired that it might be expended in providing nurfes to attend the poor infirm people at the fring, or in building lodging-houfes and accommodations for them near it. His executors performed their truft with great propriety. They built an hofpital, provided nurfes, |fupported upwards of one hundred paupers, who had come from different parts of the ifland at various times for relief; and in 1771, when the ten years term affigned by the donor expired, had a balance of 96 l . in their hands. The affembly, upon their reprefentation, that, without the public affiffance, this neceffary relief, could no longer be continued to diftreffed objects reforting to Bath, benevolently granted an aid of 70 l .per ann. and ordered the fame to be paid into the hands of the phyfician there, to be expended, and accounted for, to the fame good purpofes, and under the fame provifions, as Mr. Valette's annuity. This worthy man has thus laid the foundation of a very ufeful charity, which is likely to be permanent ; fince there is no doubt but the affembly will continue to fupport it by an annual benefaction. Acts of this kind are real mo-
numents of honour, which outlive the coflieft fculpture, attract panegyric without flattery, and veneration without envy.
The patients, who defire to drink the water in the greateft perfection, take their ftand upon large flat fones in the river-courfe, within two or three feet of the rock, and receive it immediately from the hand of the drawer. The mountain, called Carrion Crow Ridge, in which it takes its fource, is one of the higheft in this ifland, and appears from fome diftance below to have a fharper pike than moft others. The town of Bath is feated about a mile and three quarters from the fpring, on a triangular flat, wafhed on three fides by the Sulphur, Illand, and Flantain Garden rivers; fo that it is a perfect peninfula, bounded, where it joins the main land, with a range of hills, which gradually rife one above another, till they reach the Blue Monntains. The three rivers unite their ftreams a little beyond the town, and continue their current together till they fall into the fea. This low fituation makes the town very liable to be incommoded by inundations, whenever thefe rivers happen to be fivelled by the autumnal rains. They have often endangered fome of the buildings; and feldom retire into their proper channels without committing depredation. In other refpects, the difance from the fpring is attended with the happieft confequences to the patients, who ride on horfe-back to drink at it twice a day, and promote the efficacy of the water by joining fo wholefome an exercife with it. The road which leads to the fpring is of a romantic appearance, being conducted along the fides of very fieep mountains the whole way, whofe projections and gullies have not unaptly been compared to the folds or plaits of a man's coat. It is not in all parts of fufficient width for a wheelcarriage to pafs, nor very fecure even for horfes, if they fhould be fkittilh ; for here and there it over-hangs the river at a great elevation; and thefe precipices have no other fafeguard againft fuch kind of accidents, than the trees which grow upon their face. Among thefe mountains is great abundance of iron ore. The prefence, indeed, of this metallic fubfance is, in the opinions of fome, fufficiently evidenced by the quality of the waters iffuing from them; but it is not probable they will ever be explored for the fake of obtaining it.

## BOOK II. CHAP. VIII.

The firft vifit paid to the Hygæian fount is generally attended with fome terror; but this foon wears off; and I have known ladies, who, from a very cautious frail's pace, proceeded gradually to a quick trot, and at laft to a hand-gallop, along this road, emboldened by habit, and animated by the infpiriting effects of the water. To prevent getting wet with fudden fhowers, which frequently defcend from the furrounding cloud-capped fummits, little fheds are erected at fhort intervals, ftretching acrofs the road, under which the bobelins may take refuge. Thefe fhowers are generally tranfient, though fometimes heavy while they laft. The hill-fide along the road, for the moft part, confifts of Jrata and large mafles of a brown, brittle ftone, which flides off in thin flakes, fmooth, and Chining. The foil above is a deep, rich mould, chiefly vegetable; and it abounds with fmall rills of very fine water. The extraordinary cures performed by the Bath-fpring induced the legiflature of the ifland, from motives of humanity, to take it under their fanction, and extend fo noble a remedy to thofe poor iuhabitants who might want the means of procuring fubfiftence and medical advice, whilft under its operation. They formed the town into a corporation by law; granted it a public feal ; directed the manner of laying out and affigning the lots of ground; caufed thirty Negroes to be purchafed, for keeping the road leading to the fpring in conftant good repair, and planting vegetable provifions for the ufe of poor perfons reforting hither ; and appointed a liberal falary for a phyfician, to be refident in the town, and adminifter to the poor gratis. For the better accommodation of the latter, they founded an hofpital in the fquare, divided into convenient wards and apartments. The reigning fpirit of the inhabitants zealoufly feconded thefe charitable provifions. Many perfons of fortune took up lots, and began to erect houfes. The fquare was foon adorned with the hofpital, a public lodging-houfe, and a billiard-room. It became the fafhion every year for a crowd of company to affemble here from all quarters of the ifland. The powers of mufic were exerted; the card-tables were not idle; and, in fhort, from a dreary defert, it grew into a fcene of polite and focial amufements. This (alas!) was of no long continuance. The unfortunate political divifons, which afterwards prevailed during the adminiftration of a certain

## j A M A 1 C A .

hot-headed govenor, deftroyed all that harmony butween families which, while it fubfifted, had been the principal caufe of making this place an occafional retreat; where they had ufed to meet each other in friendmip, and united their talents of pleafing. The fcene became changed; party-rage fucceeded; the parizans of the different factions could not endure the thought of mingling together under the fame roof; and the more moderate perfons grew indifferent to a place, where chearfulnef, confidence, and mutual refpect, no longer held any fway. From this period began its decline. Moft of the houfes that were built have, from neglect and want of inhabitants, gone into decay; the half-finifhed frames of fome, which were juft beginning to rear their heads, have mouldered into duft. 'The billiard-room is in ruins; and, in 1768 , I obferved the tattered remains of a once fuperfine green cloth, which covered the table, all befmeared with the ordure of goats and other animals, who took their nightly repofe upon it. At this time, the town was reduced to about nine or ten habitations. The hofpital was converted into a barrack for a company of the regulars. Two lodging-houfes fill remain; but they are much in want of repair, and feem inclined to partake of the general ruin. The falutary ftream, which Providence has fo benevolently granted for the relief of human mifery, is ungratefully (I had almoft faid impioully) fuffered to glide away neglected and unheeded to the ocean, as if it had entirely lont its former virtues. There is nothing more reproachful to the oconomy and good-fenfe of the principal men in this ifland, than fo thameful a neglect. Will it be imputed to indolence, to caprice, or inconfiftence, that, after fo much folemnity and parade in eftablifhing the town; after fo much apparent happinefs derived from the inftitution; fuch munificent provifions for the fick poor; after advancing the plan fo far towards maturity; they have devoted their whole fabric to fubverlion? It is much to be regretted, that a fcheme attended with fo large an expence, and fo well calculated for the public health and entertainment, has been fo unaccountably dropped; when a fmall annual fund, fet apart for the purpofe, would have fupported all the buildings erected here for the general ufe or amufement. The hofpital is built of a kind of white free-ftone, of which there are feveral
quarries in the neighbourhood: it is of the fame quality as that which abounds in the parifhes of St. Anue and Weftmoreland; it is very foft, and eafily wrought when fift dug, but grows hard after expofure for fome time to the air. The foldiers, on their firft arrival here, became fickly. This was imputed to the confant dampnefs of the walls; for which reafon they were afterwards plaiftered; and it was thought they grew healthier; but in the year 1768 they had no lefs than twenty-five on the fick lift; and upon enquiry it was found, that they were fubfifted on falt-fifh, falt-beef, and bifcuit, not the beft in quality; and were allowed frefh provifions only one day in the week. The falt provifion was brought from Kingfon, and came at a much dearer rate than frefh victuals, which the neighbourhood affords. Of bifcuit, for example, not more than five or fix could be bought for feven pence-halfpenny; and that quantity cannot be thought more than fufficient for a foldier's daily allowance of bread. Whereas fifty plantains were to be had at Bath for the fame money; which are more than one foldier could devour in a week. Frefh pork was to be got here cheaper than the beft falt-beef; fowls likewife, and frefh fifh, were exceedingly reafonable. The number of ladies and gentlemen, who lad reforted here for the benefit of the water, amounted in two years to only fixty-fix, by many fewer than ufed to meet here at one time, when Bath was in its flourifhing xra.
Proceeding from Bath to the Eaftward, we pals along the rich banks of Plantain Garden River, through a fucceffion of the fineft fugar-plantations in the ifland. The foil in fome parts is a black, vegetable mould, of great depth, intermixed with fhells; in other parts a deep, brick mould; and, towards the river's mouth, the Jand on each fide is extremely flat, which fubjects it to be overflown pretty regularly once a year by the river. Thefe floods generally lay all the canes proftrate, and cover them with a rich fediment of mud. But they fpring again after the water retires, and grow aftonithingly luxuriant, requiring no other manure than what this river, 1 ke another Nile, fo invariably depofits. Yet the fugar produced here is commonly of a good complexion, though faireft and in greatef quantity, if the feafon continues dry during the crop.

This is the tract of cane-land which fuffers lefs than any in the whole ifland by a long drowth; for the water is every where fo near the furface, as to fupport a due vegetation, when the canes in other parifhes are parched and deltroyed for want of rain. The rich mould of Vere alone may difpute the preference with it for depth and fertility; but, I think, the land on Plantain Garden River, being happily in a more feafonable fituation, muft be efteemed fuperior; and, in fhort, on a general furvey of this Eaftern quarter of the ifland, it appears rather more productive, and of better ftaple, than the Weftern end. In regard to the natural productions, it contains a great many rare plants that are peculiar to it, with fome others that are alfo obfervable in the Weft divifion ; and the reft are fuch as are common to all parts of the ifland. Among thofe of the firft clafs is the gum-tree, or fapium of Dr. Brown, who, by fome miftake, has defcribed the parrot gum-tree for it, which is a fecies of manchineel, and bears not the leaft affinity to the gumtree in its parts of fructification. It is probably a new genus, and hitherto undefcribed. It grows to a very confiderable fize, and yields a large quantity of a light-green, tranfparent, thick refin, or gum, of little fmell. This is much ufed by the planters of the diftrict for burning in their boiling houfe-lamps. They once were found here in vaft abundance; but, from the continual ravage of the inhabitants, who have cut down vaft numbers every year, without the leaft remorfe, or any caution to plant a new race; it is not improbable, that, in a little time, the old fock will become extinet; for none of this clafs have been difcovered in any other part of the country. The wood is coarfe; but it fupplies tolerable faves for fugar-cafks: a gentleman here got as many from one tree as made one hundred hogfheads, or upwards of three thoufand ftaves; from whence fome idea may be formed of the magnitude of thefe trees.

The air of the hilly part of this parifh is extremely healthy. At Bath it is cool during the greater part of the year; which is owing to its being fhaded by the neighbouring high lands, and watered with frequent howers. The air of the low grounds near the coaft, efpecially where they are fwampy, or not drained, is by no means to be reckoned healthy. The Negroes on the plantations which border on Plantain Garden River are fubject to frequent mortalities,

## BOOK II. CHAP. VIII.

efpecially if their huts are placed on the levels, which are damp, and annoyed by confant exhalations. The planters have wifely fixed their own habitations in general upon elevated fpots, in order to be fecure from floods, which have fometimes been fo violent on the lower grounds, as to fweep away buildings, cattle, and Negroes.

This parifh, it is apparent, has increafed very largely in its ftock of Negroes and cattle; and now contains near one hundred fettlements. From the goodnefs of the foil, the number of rivers, and plentiful fupplies of rain, it has the promifing appearance of becoming one of the moft populous and opulent in the whole inland.

> |  | S E C T. |  |  |  |  |  | VI. |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |

THIS parifh is bounded on the Eaft and North by the fea; Weft, by St. George, and part of St. David; and on the South and South-Eaft, by St. Thomas. The adjuftment of its boundary, as the whole was formerly included in the pariih of St. Thomas, has occafioned many difputes between the two parifhes, both of them laying claim to the inhabitants of Manchineel, in the SouthEaft quarter; who, though actually within the boundary of Portland, have generally paid their taxes in the parifh of St. Thomas. But the law, by which Portland was firft formed into a diftinct parifh in the year 1723 , exprefsly makes White River the SouthEaft boundary ; and, this limitation having been ratified by clear recitals in feveral fubfequent laws, there appears no authentic

Vol. II.
ground at prefent for controverting it. This parifh comprizes a vaft tract of fine land; but the fettlements are fcattered along the coaft; and the interior parts are as yet unoccupied, except near the Rio Grande on the North fide, where the moft diftant are not more than fix miles from the fea. It is mountainous, and fubject to almoft continual rains, which are naturally caufed by the height of the central ridges, and fo prodigious an extent of thick woods; but they would undoubtedly decreafe here, as they have done in the other diftricts, if any confiderable part of this wilderne's was cleared, and room given for a free paffage to the wind and vapours. It contains eight or nine rivers, moft of them of no great note; the principal is Rio Grande before-mentioned, which has its fource about fixteen miles from the fea, and becomes very confiderable by the acceffion of feveral ftreams which fall into it. The chief Thipping-places are, Port Antonio, formerly called St. Francis; Prieftman's Bay; and Manchineel Harbour. Port Antonio lies on the North-Eaft part of the coaft, in about $18^{\circ} 1 I^{\prime}$ North latitude. It comprehends two harbours, the Eaftern and Weftern, divided from each other by a narrow peninfula, of about three miles and a half in length, on the point of which ftands Fort George. The fhip-chamel leading into the Weftern harbour paffes between this point, and Lyncl's, or Navy Illand, and is about one mile over. The entrance into the Eaftern lies between the South-Eaft point of Navy Illand and the main land, and about three miles from fhore to flore. There is alfo a fmall channel on the Weft fide of the ifland; but it is extremely narrow, and obftructed with very extenfive fand banks; fo that the deepert part can only admit boats. It is alfo rendered dangerous by a reef of rocks, ftretching from the North-Weft fide of the ifland, between two and three leagues towards the main land. This ifland is three miles and a half in length, by about one and a half in width, and lies in an oblique direction South-Eaft and North-Weft. Towards the fea it is inacceffible, on account of the rocks and fhoals which guard it on that fide; but on the fide next the harbour there is very deep water clofe in, fo that men of war coming in have fwept the trees with their yards. The harbours are land-locked, and capacious enough to receive a very large fleet.

## BOOK II. CHAP. VIII.

This part of Jamaica, lying only about thirty-fix leagues from Cape Tiberon, on the Weft end of Hifpaniola; and the difficulty confidered which our men of war have fometimes encountered in turning up againft the trade-wind, and currents from Port Royal, in order to weather the Eaftern point of Jamaica; together with the commodious fituation of Port Antonio, which opens directly into the Windward Paffage; gave rife to the fcheme of fortifying and adapting it as a place of rendezvous for the fquadron in time of war. In the year 1728 , the affembly paffed an act appropriating twenty acres of land on Lynch's Ifland for the conveniency of erecting itore-houfes and wharfs for his majefty's naval ftores, and careening the fhips of war. In the year 1733, this work was in great forwardnefs ; and rear-admiral Stuart, who then commanded on the ftation, finding the air of the ifland unhealthy, ordered the wood to be cut down and burnt. Unfortunately, inftead of hiring Negroes to perform this laborious tafk, it was affigned to detachments made from the crews of the Lion, Spence, and fome other fhips of war; of whofe incapacity for it Dr. Lind has given us the following melancholy account:

Many of thefe men were feized at once with a fever and delirium. 'This phrenzy attacked a man fo fuddenly, and with fo much fury, that with his hatchet, if not prevented, he would have cut to pieces the perfons who ftood near him. Orders were iffued, that, as foon as the men were thus feized, they fhould be bled, and immediately fent on board their refpective fhips. The confequence was, that all who were carried on board quickly recovered; whereas thofe who remained on fhore either died, or underwent a dangerous fit of ficknefs. This calamity, and the peace which not long after happened, occafioned the project to be dropped, although the government had been put to a great expence in erecting feveral forehoufes, and in furchafing the ifland in propriety. Thefe buildings having fince gone to decay, and the inhabitants in the neighbourhood made free to pull down and ufe fuch of the materials as were ferviceable to them. The reafons for refuming this fcheme are at prefent extremely ftrong, fince the French have laboured fo fuccefsfully in fortifying and compleating a very large town at Cape Nicola Mole; which lying only fixteen leagues and a half from the

## J A M A I C A.

Eafternmoft point of Cuba, they have got a key, which as effectually locks up the navigation of the Windward Paflage to the Eaft, as the Havannah, in the hands of the Spaniards, fecures it to the Weft by the Gulph of Florida; the confequence of which muft neceffarily be, in any future rupture with France and Spain, that, without a very ftrong convoy of feveral men of war, not a mer-chant-fhip will have the leaft chance of getting home: and I think it is evident, from all the pains and expence which the French have been at in making their eftablifhment at the Mole, that they defigned it as an effectual curb upon the Jamaica trade, and for no other purpofe: becaufe the country that environs it is rocky, barren, and unfit for plantations of any fort. It is plain, therefore, that they had not agriculture in view; and it is moft probable, that, in time of war, they will always take care to keep a number of men of war and frigates at the Mole, or cruizing between it and Cape Maize, to intercept our homeward-bound trade, which of courfe will fall an eafy prey, unlefs we have always fo large a fleet on the ftation, as to be able to block up theirs, or difpute fuperiority of force with it. As a check therefore upon their fortrefs, it would feem abfolutely neceffary, that Port Antonio thould be Arengthened with fortifications, and the former plan-revived of accommodating it for the reception, refitting, and careening, of his majefty's fhips: and, in order to guard againft that havock, which the employment of felling trees, and clearing ground, in the Weft-Indies, has never failed making among Europeans, elpecially if unfeafoned to the climate; the legiflature of Jamaica ought, in regard to the importance of this concern to their properties, either to purchafe fifty Negroes, or levy that number in rotation from different eftates, to be employed, under proper white overfecrs, to clear away all the wood upon the ifland, and affift in carrying on other laborious works that may be required. The raifing them by levy might be made very equitable, if, at the fame time, their refpective owners were to be paid a certain juft rate per day, for their maintenance and hire, out of the public funds; and the expence to the ifland would be very trifling.

Whole of one year's expence to the ifland is, ferling, 872 l. 16s. $7 \frac{1}{4} d$. ; currency, - 122119.3 It is not probable, if thefe Nogroes were to be duly taken care of by the fuperintendents chofen for this purpofe, that any of them would die within the twelvemonth, fuppofing them to be healthy and able when delivered; and none others fhould be accepted ; but, for greater equity to the individuals to whom they belonged, they might be fairly valued by three or more difinterefted magiftrates before their going on fervice, and any deficiencies at the year's end made good by the public accordingly. In order to form a body of labourers, to be kept afterwards conftantly employed in building fortifications or other works, feveral draughts might every year be made, from the gaols, of fuch llaves as are fold out for payment of their fees; and, in many cafes, the fentence of death, or banifhment, might be commuted for perpetual labour in the king's fervice; and a piece of land appropriated near the port for their provifion-ground, that their fubfiftence might, for the future, be attended with no expence, either to the illand, or to the crown. No time can be fo convenient for conducing fuch a plan as the prefent interval of peace; and, being carried on with vigour, we fhould have in another war this fure afylum for the fquadron, from whence it might fally forth to diftrefs the enemy, defend our homewardbound fleets, and give protection to our fhips coming from Britain to Jamaica, or coafting round from the North to the South parts of the ifland.

When the duke of Portiand was governor, a town was projected on Pattifon's Point, bordering on the harbour, which was to be called

## J A M A I C A.

called Titclifield, after a manor belonging to his grace in Hampfhire. One hundred acres were affigned by act of affembly for this purpofe; to which were added three hundred and fifty acres for a common. A quarter-feffion for the peace was to be held here four times a year; the port was made a port of entry and clearance; and the receiver-general, fecretary, and collector, were ordered to kecp deputies here, who were allowed a falary of $70 \%$ each per annum. This town was laid out, but not built ; for, the project be-fore-mentioned not being carried into effect, and the parifh continuing but very thinly fettled, there was not a fufficient encouragement to induce perfons to build; nor trade, nor manufacure to give a town fupport; fo that, at prefent, here are not above fifteen or twenty fraggling houfes about the harbour. The making this one Atation for the fquadron would be the fureft means, not only of encouraging a town here, but of multiplying fettlements in the neighbourhood, by the demand there would be for hogs, poultry, plantains, and other provifions; and, in regard to trade, this port lies conveniently for opening fome intercourfe with the Eaft end of Cuba, and the fmall Spanifh vefficls of St. Domingo, who might fteal along fhore to the Ifle of Vache, and eafily make this port. Some beneficial traffic might likewife be occafionally carried on with the French for their indigo, in return for our Britifh hardwares, and a few other affortments. I am not without hopes, that the legillature of Jamaica will, in time, be rouzed into a ferious attention to the further improvement of their country, by a few eafy meafures, which require only judgement in fetting them on foot, and unabated perfeverance in conducting them to a happy effect. No part of the ifland feems to claim their affiduity more, than this extenfive parih of Portland; which, from all the reports of furveyors who have traverfed its recefles, contains immenfe tracts of very rich land, finely watered, though fill covered with thick woods. The moft popular work they have hitherto done in it, is the road which paffes through an almoft uninhabited wild, from Bath to Port Antonio. It traverfes a tract of near fixty thoufand acres, which has not a fingle fettlement. The former road from Titchfield to Bath through Manchineel was at leart thirtyfour miles in length. Upon a reprefentation to the houfe of af-

PPJCD

## BOOK II. CHAP. VII.

fembly, in ry69, that a road from Titchfield through Nanny Town, and over Break-heart Hill, would be fhorter by twentythree miles; that the lands through which it muft pafs were very fit for the culture of provifions; and that it might not only become the means of fupplying the Bath plentifully with all manner of provifions and poultry, but of fettling a large tract at that time ufelefs, and of fubfifting many poor families in Portland, then in very indigent circumftances; three hundred pounds were granted towards making it. No fum was ever voted to a better defign ; but it required ftill further affiftance, to render it paffable for loaded mules, or carriages ; and therefore has not yet produced all thofe advantages that the petitioners expected from it, the expence of the undertaking being rated at $1000 \%$ The affembly therefore have fince added $300 \%$ more, the parifhioners engaging to raife the remaining $400 \%$ by a fubfcription. I am not fond of paffing cenfures; yet I muft take leave to fay, that even in the fecurity of Port Antonio, fo ufeful a retreat for the fhipping in war-time, there has appeared a very fingular inattention. The fort, which was built here to command the channels of entrance, and which is extremely well-defigned for that intention, is a baftion of twenty. two embrazures, inclofed to the Southward from flank to flank by barracks to receive feventy men, and an apattment for the commanding officer. It was once mounted with about twelve guns, twenty-four pounders. This fortrefs, at which a company of foldiers is generally garrifoned, we fhould fuppofe to deferve full as much of the public care as the Rock Fort at Kingfton Harbour ; but the condition of defence in which it was left during the late war may be judged of from the following ftate, as given in the year 1768 ; viz.

The guns all unfit for fervice, and without carriages.
No wadhooks, fpunges, ladles, or rammers.
The platforms for the guns entirely decayed.
No flag; the boat unfit for fervice; the roof of the magazine wery leaky, and no door; the furgeon's room untenantable; the roof of the commanding officer's houfe, and barracks, wholly out of repair; the foldier's barracks without platforms; no hofpital; the guard-houfe tumbled down; and no place of confinement, \&cc. \&c.

## $J A M A \perp C$.

To the honour of the affembly, however, let it be mentioned, that, upon feeing this miferable catalogue of dilapidations, they immediately granted fome provifion for putting it in a better flate; and I fhould not have quoted the report, but for the fake of remarking the expediency there feems of having an engineer, or in-fpector-general of the barracks and fortifications all round the ifland; whofe province it fhould be, once in every year at leaft, to vifit them all, examine their fate, take account of their ammunition, ftores, and habiliments, and report them to the governor, who would regularly lay the account before the affembly.

By a method of this nature, they would be duly acquainted with the condition of thofe defences, which are too remote to admit of mfpection from their own committee; and I think it will alfo be acknowledged, that their fores would be better taken care of, and lefs wafte committed.

The road from Bath paffes by Moore Town, inhabited by the Maroon Negroes; who firft took up their refidence on the Weft fide of the parihh, bordering on St. George, at a place called Nanny Town; which they afterwards deferted. Their prefent town is much better fituated for giving fpeedy protection to the eftates on each fide the Rio Grande. The South-eaft divifion of the parifh, adjacent to Manchineel Harbour, is well-fettled, and promifes to become very populous. The harbour is capacious and fecure, defended by a battery of ten guns, which is not fo ftrong a fortification as it feems to require, efpecially if Port Antonio thould not become a ftation for men of war. Between thefe two ports is another confiderable fhipping-place, at Prieftman's River. The whole number of fettlements in this parifh is between eighty and ninety; very few, in proportion to its extent. It remains for time to difcover the many natural productions and curiofities which, there is reafon to believe, are not fparingly diftributed through fo vaft a fpace of mountains and vallies, as yet but little explored. As yet we are only informed of a hot mineral fpring, which rifes on the North fide of the fame mountainous ridge that gives birth en the oppofite fide to the Bath fpring. It is reafonably conjec. tured to be only another vein proceeding from the fame refervoir ;

## BOOK II. CHAP. VIII.

there being, as it is faid, no perceptible difference in their heat, tafte, and medicinal operation.

State of the Parifh :
Annual Produce.

This parifh is certainly much improved. The legiflature paffed feveral acts tending to invite fettlersinto it; and a confiderable part of thofe who at prefent occupy it, or their anceftors, came hither under their fanction. I have endeavoured to point out the defects in thofe acts; conceiving, that, if they had been framed upon a more effectual plan, the parifh might by this time have acquired double the number. It is fubject to fome local inconveniencies, which lay the fettlers under difficulty; for which reafon, the encouragements to beginning new plantations cannot be too great; for thefe inconveniencies will grow lefs, in proportion as it becomes more populous. The great tract of mountain covered with high woods occafions almoft inceffant rainy weather at a fmall diftance inland from the coaft ; and the navigation to Kingfton for fupplies of neceffaries, or difpofal of produce, is tedious and hazardous, particularly in war-time. Their woods require, therefore, to be laid open; and a trading town is wanted. By multiplying fettlements in the interior diftrict, the firft might be gradually effected; and the fecond would naturally attend the multiplication of fettlements. The foil of the mountains, and indeed all the interior part, is extremely well-fuited to indigo; and this manufacture might be revived here, and carried on with great fuccefs and advantage. But it muft be the province of the legiflature to pave the way for it, by giving fuch aids of Negroe labourers as will leave little further to be done, by the new fettlers invited over, than to exercife their fkill in building their works, cultivating the plant, and con.. ducting the procefs to perfection. The obtaining a colony of perfons, who are well acquainted with the whole art of managing the indigo, will, I imagine, be atterded with no great difficulty, if

Vol. II.
A a
fuitable
fuitable encouragements are given. It is certain, that, if fuch a manufacture fhould upon trial be found to anfwer, there is vacant land enough in this parifh to furnifh much more than would fatisfy the confumption of Great-Britain; and the richnefs of the foil affords juft motives for expecting that indigo might be produced here of the fineft quality.

I have omitted to mention, that this parifh is without a church. The incumbent's flipend is 100 l . per annum; but he does not refide. The fervice is performed in fome planter's houfe, about once or twice in the year. It may appear extraordinary, that the legiflature fhould, in the example of this and fome other parifhes, have provided a ftipend for a minifter, without at the fame time providing a houfe of prayer. An act paffed here, in 168 I , empowers the juftices and veftry of every parifh, at their annual meeting in January, to lay a reafonable tax on the inhabitants, for the maintenance of the minifter and poor; and for erecting convenient churches, and repairing fuch as are already made, and providing convenient feats in them. The erecting of churches is, therefore, only made a fecondary obligation, and as fuch difpenfed with by the junior parifhes, under the plea of poverty, which will probably avail them, till a more ardent zeal in the caufe of religion, than hitherto has been manifefted, fhall infpire the houfe of reprefentatives, and lead them to enquire into the merits of this pretence.

## S E C T. VII.

## St. George, in the Precinct of St. Mary.

THIS parifh is bounded on the Eaft by Portland; Weft, by St. Mary; North, by the fea; and South, by the parifhes of St. Andrew and St. David. It is watered by about fixteen rivers and principal itreams; the largeft and moft noted are, the Agua Alta, or Wag-water, which forms the Weftern boundary; the Buff Bay; Anotto, Spanith, and Swift. The former of thefe, being joined near the coaft by feveral other ftreams, forms a canal, navigable by boats from Anotto Bay (into which it difcharges), about two miles inland; which is a great conveniency to thofe fettlements that border upon it. The bay is common to this parihh and St.

## B O O K II. CHAP. VIII.

Mary, and is their principal fhipping-place: it is a good road, except in the time of year when the Norths prevail, to whofe violence it is too much expofed. The face of the parifh is for the moft part very hilly; and the Blue Mountain Ridge, after interfecting Portland, continues its lofty battlements from Eaft to Weft through St. George's, engrofing the whole of its Southern diftrict. The inconveniencies of much wet, and a diftant market, which have retarded the population of Portland, have likewife attended this parifh, and perhaps in a feverer degree; fo that it is fill to be confidered in its infancy.

The lands adjacent to the coaft are not fettled for more than four miles from the fea, and in fome parts not more than one. The diftrict behind comprizes about fixty-five thoufand acres of wildernefs, whofe foil and natural productions are at prefent unknown: this vaft tract has only one road cut through it, which paffes from Kingfton through Liguanea, and, croffing the centre near the Negroe-town called New Crawford, terminates at the coaft. The land hitherto fettled in fugar-plantations turns to better account, and is lefs laborious, than what we meet with in Portland; but as yet no trial has been made with canes above the diftance of two miles from the fea. The mountainous region behind contains, probably, a very great variety of foil; which, though too rich at firft to produce fugar, would yield a large quantity of fine rum, or indigo: this latter is confidered as a great impoverifher of land, and therefore very fit to prepare a rich foil for the fugar-cane. It is pretty evident, on contemplating the face of this parifh, that it is not likely to make much further progrefs until more roads fhall be formed through fo extenfive a wood-land; for, although many thoufand acres have been patented, they were, for the greater part, forfeited, and the remainder left unfettled by the proprietors on this very account : they found it impracticable to get at their lands after they had patented, or purchafed; and of courfe were unable to make any ufe of them. The firft ftep towards further improvements here will therefore naturally commence with opening new roads of communication; which may allure the proprietors of plats on each fide to begin fettlements. It cannot be expected, that individuals will undertake this tafk, or incur fo much expence, on

$$
\text { A a } 2 \quad \text { the }
$$

the diftant view of profits, not to be acquired till after feveral years of diligent application, and many further charges. It muft be executed at the public coft, as it is not likely to be ever atchieved by any other means. Nor would the expence be thrown away; fince every fettlement, once effablifhed. makes a return by adding fomewhat to the fecurity of the ifland, to its trade, opulence, and revenues. In order to prove which, let us examine the advantages of this nature which the parifh even now contributes. Here are about fixty fettlements in all, whore quota of the poll-tax amounted to about 391 l . for one year; which, at an equal average, comes to 6l. נos. each. Every new fettlement formed here may therefore be reafonably concluded to give the revenue an annuity of 61 . Ics. in that tax alone. If we affign this, on a moderate computation, as the one-half of the whole taxes levied, confifing of various branches, the annuity will appear 13 l. per annum, without taking into account the confumption of tools, food, cloathing, and other articles; which to the meaneff fetticr cannot be rated at lefs than $50 \%$ per annum. The projecting of new fettlements therefore, and encouraging them till effectuated, when confidered in this view, feems a moft profitable adventure for the legiflature to engage in, and well deferves their moft ferious attention. To form roads which may be perfeclly firm, eafy, and commodious, is doubtiefs a bufinefs of much time, labour, and charge: for thefe very reafons (if they are admitted to be true), the lefs expectation fhould be indulged, that poor families will be able, or, if able, wiliing to devote their induftry to road-making, inftead of agriculture. But, when the public takes this work in hand, the cafe is very different. The more perfect it caufes the road to be made, the better affured it becomes of alluring inhabitants to fix themfelves on each fide of it. The returns for thefe expenditures may be tardy ; but they will be certain, and always increafing ; and (what is not to be over-looked) the money, thus laid out for fuch laudable purpofes, will remain to circulate in the ifland, and give entployment to many of its inhabitants, without impoverifhing the public.

There is nothing very remarkable in this parifh (at leaft that has fallen within my knowledge), except a falt lake, called Alligator Pond, extending from Fig Tree to Buff River Bay, and feparated

## BOOK IH. CHAP. VIII. 18ェ

from the fea by a narrow flip of fandy land. It is near five miles in length, and about half a mile wide in the broadeft reach. There is no tradition in what manner it was formed, whether by ans earthquake, or an inundation of the fea; probably both concurred. The air of this, as of all the Northfide parifhes, is in general healthy; and it may be remarked here, as at the Weft end, that the hills decline gradually towards the fea, and fwell as they recede from it towards the mid region of the illand. The moft unwholefome flate of the atmofphere in thefe parts occurs during the May rains; when the wind, fetting from the Southern points, has to pafs over an immenfe tract of woodland, before it reaches the fettlements on the North fide; but it rarely produces any other fevers than intermittents, which here are not much regarded, as they are not often attended with any dangerous confequences.

This parifh is not yet provided with a church. The incumbent's ftipend is $100 \%$ per annum; and the living, like that of Portland, a mere finecure.

Having no materials for a more particular account of St. George, I fhall conclude with,

## The fate of it:

Notwithitanding the ravages committed in it by the Maroon Negroes before their reduction, it is apparent this parifh has made confiderable progrefs in the laft twenty years; but, as a fugar-parifh, is as yet of very fmall importance. The means by which it may be improved I have already touched upon, as the beft that offer to my judgement; and in this light only I fubmit them to the difcuffion of abler politicians.

To recapitulate the preceding detail of this county: it has for its metropolis, Kingfton, where the affizes are held in January, April, July, and October.

\section*{St. ELI Z A B E T H.}

THIS parifh is bounded on the Eaft by the parifhes of Clarendon and Vere; on the Weft, by Weftmoreland; on the North, by St. James and Trelawny; and on the South by the fea. It is watered by the Black, Y S, Hector's and Broad Rivers, and feveral fmall rivulets. Of thefe the two former are the moft capital. The Y S rifes, firft, in the South-Weft angle of St. James's parifh, in a very finall ftream; and, after a courfe of about two miles, hides itfelf under-ground, and emerges at about half a mile's diftance in a large body of water, at about thirteen miles from the coaft; then, after a moderately winding courfe of thirteen miles and a half, falls into the Black River. The Broad River rifes in the Eaftern quarter of the parifh, about fix miles from the fea; firft emerging in a morafs, called Cafhue, through which it makes its way for about the fame number of miles, till it unites with the Black River. The latter firft emerges in the North divifion, at the diftance of fixteen miles from the neareft part of the coaft, and meanders about thirty-four miles before it reaches the fea, having its ftream very much enlarged by the various tributes it receives during its paffage ; fo that, in moft parts, it is from one hundred and fifty to two hundred feet wide. This is the nobleft river in Jamaica, and is navigable by boats and barges for many miles. About mid-way, and at the Forks, where it meets with the other two rivers I have mentioned, it fweeps through a large tract of morafs. The road, paffing over the May-day Hills to the Weft end, croffes this and Y S over two handfome bridges.

This great Weftern road, which leads from Spanifh Town, traverfes St. Jago Savannah, and the bridge of Milk River, in Clarendon; not far beyond which is the eftate which belonged to the late lord \(\mathrm{Ol}-\mathrm{ph}-\mathrm{t}\). Soon after leaving this, the afcent begins over May-day Hills, continuing rocky for about half a mile, till it narrows into a gloomy path between two hills, over-hung with the interwoven boughs of trees on each fide, which form an agreeable thade. At the end of two or three miles further on is a fmall

184

\section*{I A M A I C A.}
plantation and pimento-grove; and, beyond this, the way opens fuddenly upon a pretty rifing lawn, on the higheft part of which ftands a little villa, belonging lately to Mr . W-ftn-y, who is faid to be a natural fon of the late duke of \(\mathrm{L}-\mathrm{d}\). This villa overlooks a diminutive vale, through which the high road paffes, and extends its narrow profpect to another delightful, rifing fpot, of a circular form, and fringed with ftately trees. A number of kids, lambs, and fheep, are paftured in the glade, or roam on the fides of the adjacent hills, which are fenced in with a wall of craggy mountains, sichly cloathed with wood. In rural charms few places exceed this little fpot. The road acrofs this affemblage of high lands is extremely curious in every part, and worthy the traveler's attention. Thereare none in England, nor I believe in Europe, refembling it. It divides the May-day Ridges, as it were, through the middle; the breadth of which, from Eaft to Weft, is upwards of fourteen miles; it is about fifty feet in width, and confined on each fide by a majeftic wood, that is almoft impervious to the fun. The lofty trees, fo clofe arranged, form a living wall; and, intermingling their leafy branches, afford a cooling thade during the greater part of every day throughout the year. The Tavern of Knock-patrick (belonging alfo to Mr. W-ftn-y), the next fettlement we come to, ftands very commodioufly, and enjoys a moft excellent climate. The Englifh beans, peafe, and other culinary vegetables of Europe, grow here, in moft feafons of the year, to the utmoft perfection. A gentleman who fupped here could not help remarking, that the victuals were literally brought fmoaking-hot to table; a phænomenon feldom obferved in the low lands, where the air is fo much more rarefied. A fpecies of the tarantula fider is faid to be often found in this part of the country. The woods abound with paroquets, and pigeons of various forts. The laghetto, and other uffeful trees, fuch as mahogany, cedar, pigeon-wood, \&cc. This tavern ftands in the midft of thefe woods, and as yet has but a very finall tract of cleared ground about it. Every appearance of the road to the Weftward of it is fimilar to what is obferved on the approach to it from the Eaftward, till the hills begin to decline, and the parifh of St. Elizabeth breaks upon the view. From the different parts of this declivity,

\section*{BOOK II. CHAP. IX. 185}
the profpects are finely variegated, and, from fome ftations, are extended not only over the champaign-country of this parifh, but into great part of Weftmoreland many miles: but one of the moft pleafing fcenes is, the fpacious tract of open land, called Labour-in-vain Savannah, which appears partly of a vivid green, and partly of a ruffet colour. One fide of it is girt about with romantic hills and woods; the other, towards the South, is wafhed by the fea; the middle fweep is graced with fcattered clumps of trees and under-wood; which objects all together combine in exhibiting a very picturefque and beautiful appearance.
"From this the profpect varies. Plains immenfe
" Lie ftretch'd below; interminable meads,
" And valt favannahs; where the wand'ring eye,
"Unfix'd, is in a verdant ocean loft.
" Another Flora here, of bolder hues,
"And richer fweets, beyond our garden's pride,
"Plays o'er the fields; and fhow'rs with fudden hand
" Exub'rant fring; for oft' the valleys thift
s6 Their green embroider'd robe to fiery brown,
"And fwift to green again; as fcorching funs,
"Or ftreaming dews and torrent-rains prevail,"
One would almoft incline to think, that Thompfon, and his Pegafus, had made the tour of this region; fo appofitely has he defcribed it.

South of Effex Valley Mountains, are diftinguifhed the high lands, and fand hills near Pedro Bluff. Thefe, it is true, are fome additions to the profpect, but upon reflexion difpleafe the eye, as they are in general fo poor and barren, as to difdain all kinds of cultivation, and only yield in wet feafons a fcanty pafturage for fheep and the younger cattle. About the foot of Mayday Hills, the bread-nut trees grow luxuriantly, and afford to the bordering fettlements great abundance of nourifhing fodder for their flock.

The principal capes, or head-lands, on the coaft are Pedro Bluff, and Luana Point ; the former of which gives fhelter to an anchor-ing-place for fmall veffels in Pedro Bay, lying to the Weftward of it. Between this and Luana Point is Black River Mouth, defended Vol. II, B b
by
by feveral banks of fand; within them is a fine road for fhips of large burthen; and near this is therefore eftablifhed the chief barquadier for all the plantations and fettlements in the parifh [d]. The Eaftern fide retains its antient name of Palléta, or Parratee Bay. The Spaniards had a fmall village here, which was deftroyed by a detachment of the army under colonel D'Oyley. This part is fwampy, and principally inhabited by Mulattoes, Quaterons, and other Cafts; a poor, but peaceable and induftrious race, who have long been fettled here, and live by fifhing and breeding poultry. If it was not for the fhoals at the mouth of the river, there is depth and room fufficient in it to anchor, and keep affoat, a very great fleet of capital fhips. But, though it is not navigable by veffels of burthen, it is, as well as its branches, of very eminent fervice to the inhabitants of the adjacent country, by enabling them, at fmall expence and trouble, to bring their fugars, rum, and other kinds of produce, by water-carriage, down into the bay. Heetor's, or One-eye River, which rifes near Wallingfordplantation, in the North-Weft diftrict, after a zig-zag courfe of about twelve miles, difcharges into Black River. The Eaftern branch of it enters into a very high ridge of mountainous land, extremely well-wooded, and filled with mahogany and other valuable timber, and difembogues again at three miles diftarce. The arch-way under which it paffes is of a rude, Gothic appearance, about twenty feet in height, but rifing and falling alternately within; where it is fupported with pillars, the nuclei of which are of a very fine, white free-ftone; and in fome parts of this cavern are large frata of marble. The water deepening as we advance forwards under the mountain, it is not an eafy matter to explore this remarkable adit for any very confiderable extent; though, for a good diftance from the mouth, it does not reach much above the knees. However, it may be claffed among the more beautiful natural curiofities in the ifland, and merits a further inveftigation. This, with the YS (fo called from the Galic word Y S, which fignifies crooked, or winding), and the other ftreams which empty themfelves into the Black River, contribute chiefly

\footnotetext{
[d] Near the mouth is often caught the manatti; which has given name to fome adjacent mountains,
}

\section*{BOOK II. CII A P. IX. 187}
to its importance. The road or harbour is guarded not only by the fhoals, but by two batteries; the firft, a publick one, of five guns, fix to nine-pounders, built on a little eminence near the fea; the other, a private property, belonging to Mr. Crutcher. Exclufive of thefe fortrefles, the variation of the fands renders the entrance difficult, and dangerous to thofe who are not well acquainted with it. The barracks ftand at about a quarter of a mile from the bay; are capable of receiving thirty men, and generally garrifoned with a party of regulars. The church is about the fame diftance from the village of Black River, a handfome edifice of brick, lately re-built. The parfonage-houfe ftood on Middle-quarter-Mountains, in a dry, elevated, and very pleafant fituation, in the centre of the glebe; but, not long fince, was unfortunately burnt to the ground by an accident. The rector's ftipend is \(200 \%\). per annum; but he has likewife a confiderable income from the labour of about twenty Negrocs, which, in confequence of an aft of affembly, paffed in the year 1753 , for difpofing of fundry parcels of land belonging to the parifh, were purchafed with the value of the fales for the ufe of the rectory; and, by another act paffed in 1764 , all the parcels of land then undifpofed of were directed to be fold, and the nett-money applied to the buying a tract of provifion-ground contiguous to the old glebe, and to be annexed to it in perpetuity: fo that the whole of the glebe confifts of, at leaft, two hundred acres of fine pafture and provifion-land; and the value of the living is computed to be between fix and feven hundred pounds a year. By the road-fide, not far from the parfonage, is a very curious object, viz. a large fpreading fig-tree, whofe boughs overnadow the road. It is about thirty feet in height, and out of its fummit appears to grow an elegant thatch-tree, of about ten or twelve inches diameter, which has a branched top diftinct from the other, and rifing twelve or fifteen feet above it. The wild fig-tree is, in its infant ftate, only a poor, weakly, climbing plant, like the tendril of a vine, which rears itfelf from the ground by the friendly help of fome neighbouring tree, and fhoots out feveral delicate radicles, which entwine about the fupporter, and gradually extend themfelves downwards as the ftem increafes. This at length attains to the fummit, multiplying its branches and radicles, which in pro-

\section*{J A M A I C A.}
cefs of time reach the earth, where they foon take root, and become fo many new ftems to feed and fuftain the parent plant. This now begins to enlarge in dimenfions, and, expanding its bark, forms by degrees a trunk, or cafe, around its fofter tree, which, if not compofed of very firm materials, is liable to have its vegetation entirely checked by the parafitical embrace. A fpeedy decline is the confequence. At laft it dies; and then ferves only to nourifh with its duft the luxuriance of the reptile, that has fupplanted it. The reafon why this thatch-tree has efcaped the like fate may be, that it was probably at full-growth when it was firf invaded; and the denfity and hardnefs of its bark, which render it almoft impenetrable by the keeneft inftrument, have made it capable of refifting the utmoft impreffion and efforts of its treacherous gueft.

The town of Lacovia, which ftands about feven miles inland from the bay, between the Y S and Black rivers, has its name perhaps from a corruption of the Spanifh words la-agua-via, the watery way, or laga-via, the way by the lake; for this part of the country, being very low and flat, is fometimes overflowed with water, from the large morafs which furrounds it; but, as the roads are now raifed confiderably, it is feldom, if ever, impaffable. This town contains two good taverns, for the accommodation of travellers, and about twelve or fourteen houfes, moftly inhabited by Jews. Here is alfo a court-houfe, for more conveniently holding the quarterly feffion of the peace, petty-courts of common-pleas, elections, and veftry-meetings, it being fituated nearly in the middle of the parifh.

The face of the parifh is various. The Eaftern divifion is walled in by fucceffive ridges of high mountains, diftinguifhed by the names of Carpenter's, Don-Figuerero's, and May-day. Towards the North, it is bounded by thofe of Edmund's Valley, and the Blue Mountain Chain, which diffociate it from St. James and Trelawny. Accompong and Charles Towns, inhabited by Maron Blacks, lie among thefe mountains, in the North-weft part of the parifh. Befides thefe, are fmaller chains, which run in different points; as Effex Valley Range, Eaft and Weft, near the coaft ; Top Hill, lying parallel; and the high land of Pedro Bluff, extending from the Cape, Eaftward, along the Thore. In the centre

\section*{BOOK II. CHAP. IX.}
of the parifh are Santa Cruz, and Burnt Savannah Mountains, lying North-weft and South-eaft. A little further back, are thofe of Naffau and Lacovia. To the South-weft of thefe, are Middlequarter Mountains, running N. N. E. and S. S. W. and the Weftern boundary is croffed by New Savannah and Luana Mountains, tending N.W. by W. and S. E. by E. Such a multitude of eminences not only ferve to attract frequent rains, but contain refervoirs for affording the conflant fupply of water neceffary to feed the innumerable fprings, rivulets, and thofe larger collections, which are perpetually flowing through every part of the lower grounds, and fpending themfelves in the ocean. The lands between, and at the feet, of thefe different mounds, admit of a great variety of foils. In the Eaftern diftrict they confift of favannah, for the moft part dry and infertile. The moft noted are Pedro Plains, Bull, Labour-in-vain (a name perfectly defcriptive of its nature), Naffau, and Burnt Savannahs. In thefe parts there are but few fugar-plantations, though a great number of very fine penns for breeding horned cattle, horfes, mules, fheep, and goats, as well as poultry of all kinds. The foil of Middle-quarter Mountains, in the South-weft, is ftony, though not altogether fo unproductive ; but the plain of Luana is a continued fand, and covered with palmeto-trees, which, though large and flourifhing, are a fure indication of its poverty. The rich veins of mould adapted to the fugar-cane are bordering upon the Y S and Black rivers; bue a vaft fcope, of not lefs than twenty thoufand acres in the whole, lies feattered in wafte morafs, which, could it be drained, might form many capital plantations. No attempt of this fort has yet been made, at leaft that I have heard of; but it promifes to yield a very great return to any of the proprietors, who fhall have fpirit, ability, and patience, fufficient for profecuting fuch an experiment. It lies in three principal divifions, each of which is pervaded by a river. The remoteft part is diffant only ten miles from the fea, and might have its products fent by water-carriage the whole way. The other two approach to the very mouth of Black River; and all of them are well circumftanced for water-mills. The land in this ifland has, from its firft fettlement, been out of all proportion too much for its average-ftock of inhabitants; but, if it fhould
ever become populous, thefe neglected portions will undoubtedly be brought into culture. In the year \(\{764\), a project indeed was talked of here for building a bridge acrofs Black River, near its mouth, in order to open a communication with the Eaft and Weft fides; by which means, it was alledged, and with great appearance of reafon, that the contiguous lands might foon be improved \([e]\); which at prefent they cannot well be, on account of the inconvenient and expenfive mode of paffing acrofs in a ferry-boat, for which each paffenger pays \(7 \frac{\pi}{2} d\). a time; and often it happens, that it cannot be ferried at all. The fum of \(2500 \%\) was propofed to be raifed within the parifh, for carrying this fcheme into execution; but I do not find that it has been hitherto attempted. This extenfive fpace of undrained, fiwampy ground circumjacent, renders the habitations on the bay unfavourable to health. So it proved to a company of the 66 th regiment, quartered here in 1764. In the month of Auguft they were attacked with putrid fevers and dyfenteries, fo fatal to them, that three men were buried in one day ; an inftance of great mortality, confidering the fmall number of which the company confifted. This ravage is to be afcribed to no other caufe than the exhalations reeking from the marfhy foil around them, which, in that hot feafon of the year, imparted an evil difpofition to the atmofphere. Some of the other quarters on the coafts are not lefs unwholefome, from fimilar caufes; which I fhall occafionally fpeak of. This regiment, which was chiefly cantoned in different parts near the fea-fhore, buried in this year no lefs than one hundred and two men; whereas the \(3^{6 t h}\), whofe quarters lay moftly at Spanifh Town, Port Royal, Mofquito Fort, and Clarendon (two detachments only, I think, being pofted on the coaft in the out-parifhes; one at Old Harbour, the other at
[e] The land contiguous to the banks of this river is alledged by fome to be of an infertile nature; which they afcribe to this caufe, that the water, being uncharged with foil, affords no vege tative depofit, like moft other rivers of the ifland, when it overflows ; but rather does mifchief, by leaving a petrifactive, barren fubitance behind. If this be true, it furnifhes another argument in favour of draining and embanking the adjacent grounds; by which means, the river-water, being hindered from fpreading, might be confined within the cuts. The lownefs of fination induces a probability, that any fuch depofit is but very fuperficial, and that at a very finall depth the natural foil is rich, and when duly turned up would become highly productive. Befides, there certainly muft have been no fmall quantity of vegetable mould accumulated in the courfe of to many ages, by the amual decay of plants and herbage on the furface.

\section*{BOOK II. CHAP. IX.}

Port Maria), lof no more than thirty men. They both arrived from Europe in the month of June. And hence may be deduced fome ufful remarks with regard to the fituations moft proper, or moft baneful, to troops fent hither from Northern climates; which, if poffibly it can be avoided, fhould not be brought down to fiwampy places near the coaft ; for, in the inland barracks, they would probably enjoy their health and vigour unimpaired, and fo be in fitter condition for effective fervice; or, by the refidence of one or two years, become fo thoroughly feafoned to the climate and manner of living, as to be lefs fufceptible of malignant diftempers, in cafe of their being afterwards, upon any emergency, marched into unwholefome quarters on the coaft.

From this view it appears to be improving; but it contains near: eighty thoufand acres of land as yet unfettled; the greater part of this is mountainous, though capable of producing coffee, and other valuable commodities. The air of the low lands is hot; and they have a plentiful ftock of mofkeetos; but the hilly parts in general are temperate and pleafant.

\section*{S E C T. If. \\ WESTMORELAND.}

THIS parifh was formed in the year \(\mathrm{T}_{7} 3 \mathrm{3}\), out of St. Elizabeth, by which and a part of St. James it is bounded on the Eatt ; on the South and Weft, by the Sea; and on the North, by Hanover. Its rivers are Bluefields, in the Eaft divifion; Bonito, or Cabarito Eaft Branch ; and Cabarito Weft Branch ; which interfect it about the middle diftrict; and New Savannah River, which rifes further Weftward. It has likewife fome fmaller ftreams; and, on the North-eaft, the Great River, which difcharges

\section*{J A M A I C A.}
on the North fide coart of the ifland, makes the dividing limit. It contains feveral head-lands, and fome good harbours; of the former, along its Southern fhore, are Parkinfon's, or Palmet Point, Crab Point, Cape Bonito or Bluff, Cabarito and Palmeto Points. From the laft-mentioned to South Cape Negril, which is the Land's-end, is a ridge of moderately high eminences, called the Negril Hills; the fhore iron-bound, and lined with rocks. On the Weft end are this Capc, Cunningham's Point, and North Cape Negril, which divides this parifh from Hanover. Bluefields Bay lies Weftward, within Crab Point. It is fpacious, and has fuch excellent anchorage, with fo fine a watering-place, that it is the conftant rendezvous, in time of war, for the homeward-bound fleets and convoys, intending to fleer by the way of Florida Gulph. The river, which falls into the bay, rifes fuddenly about three quarters of a mile from the fhore, and turns two mills in its way. Here is the fecond great barquadier for the plantations in this parifh. Weft of this bay lies Savamah la Mar, latitude North about \(18^{\circ} 13^{\prime}\), fheltered on one fide by Bluff Point; on the Weft, by Cabarito. The road leading into Weftmoreland from St. Elizabeth croffes the boundary at a place called the Wells, and proceeds for eight or ten miles along a dreary, narrow lane, oppofite Parker's Bay, till it reaches Bluefields. Near this part ftands, on an elevated fpot, the dwelling-houfe of Mr. Wh-e, called Bluehole, which commands an extenfive profpect over the fea to the Southward, and over the Weftern diftrict of the parifh. This is a modern building, conftructed with ftone, fortified with two flankers, and loop-holes for mufquetry, and defended, befides, towards the fea with a barbette battery of fix guns, nine-pounders. But, notwithftanding thefe muniments, it was taken during the laft war by the crew of a Spanifh privateer, who plundered the houfe, carried away the owner and his brother prifoners, and treated them extremely ill: fortunately for them, they were re-taken, together with their enemies, upon whom the Englifh captors did not retaliate, as they well deferved.

From the foot of this hill, the paffage is frequently made acrofs the bay, about four miles, to a place called the Cave, where the barquadier ftands. This is built of timber, and projected to a con-

\section*{BOOK II. GHAP. IX. \\ 193}
fiderable diftance into the fea, for better conveniency of thipping goods. Here moft of the fugars, rum, mahogany-plank, and other commodities of the neighbouring eftates, are put into boats, or lighters, to be carried on board fuch fhips as are to export them, and lie either at Savannah la Mar, or the upper end of the bay. The road from hence continues rough and ftony, till it reaches Sweet River, fo called from the tranfparency and purity of its waters, which fall into the bay. After pafing this, and a long tedious lane, the face of the country opens at once upon the view, and appears truly beautiful from the continued fucceffion of wellcultivated fugar-eftates and rich paftures. The rains in this parifh being ufually heavier than in moft others on the South fide of the ifland, and the country in general flat near the fea, the roads are confequently for the moft part deep and dirty, and in the rainy feafons fearcely paffable. Savannah la Mar, though it is the principal barquadier, has neverthelefs but a very indifferent harbour, or rather road, for the fhipping. The water is Choal, and againft the affaults of the fea it is defended only by reefs of funken rocks, and a few fand-banks, which are apt to thift. Nor is it much better guarded againft enemies. The fort, which coft the parifhioners upwards of fixteen thoufand pounds in building, is extremely illcontrived, and perpetually fapped by the fea. Formerly it was mounted with eighteen or twenty guns, moftly of too fmall a calibre; and, indeed, both from its fructure and furniture, it never could have promifed any fecurity except againft privateers. Unlefs it has very lately been repaired, it is in a very ruinous condition. It was never compleated; and, the South curtain being undermined, the wall on that fide is almoft all tumbled into the fea. As for the baftions, they are for the moft part unfinifhed. Of this fort we may juftly fay,

Vis confilẑ expers, mole ruit fuâ.
" Ill-counfel'd force, by it's own native weight,
"Headlong to ruin falls."
The parifhioners thought perhaps that they had a right to lay out their money in what manner they pleafed; and therefore, confulting (as one would imagine) neither engineer, nor any other perfon better fkilled than themfelves in fortification, they refolved to Vol. II. C c throw
throw away one half of it into the fea, and with the other erect this mif-fhapen pile, as a lafting monument to convince pofterity of the inexpertnefs of their fore-fathers in military architecture. At the entrance is a fmall magazine, and a barrack for about a dozen men. Moft of the guns are difmounted; and falutes are therefore fired from a battery of fourteen fmall pieces, ranged before the court-houfe. This building was erected in 1752, for holding a court of common-pleas in matters of debt not exceeding rool., quarter-feffions of peace, elections, and veftry-meetings. In \(175^{8}\), the affize-court for the county of Cornwall was appointed by law to be holden here; in confequence of which, the jurifdietion was greatly enlarged. Two years before, this port, together with Kingfton, Montego Bay, and St. Lucia, was by act of parliament made free, for the importation of live cattle, and all other commodities except fugars, coffee, pimento, ginger, melaffes, and tobacco, the growth or produce of any foreign colony in America; and for the export of Negroes, and all other legally imported commodities in foreign floops or fchooners having only one deck. The advocates for this bill, and the fubfequent one (cap. Lif. 6 Geo. III. which permits the importation of foreign melaffes, paying only a duty of one penny per gallon), alledged the great utility of admitting Negroes and provifions to be brought into our Weft-India iflands from the foreign colonies, and in foreign bottoms, in order that they might be plentifully and cheaply fupplied. On the other hand, it was objected, that Ireland and the North-American provinces were very able to furnifh our iflands with much more provirions than they could confume; that, if the price of Negroes is high, this may arife from fome mifmanagement in the African trade; but that it does not appear that foreigners can buy them at a cheaper rate; if they do, the trade requires to be better regulated; but, if they buy them upon equal terms, the high price is a gain to the Britifh merchants; that the capital miltake in thefe bills lay in the latitude of encouragement which they gave to the employing a greater number of foreign thipping and feamen than are at prefent employed, and confequently diminifhing thofe of GreatBritain. Nor is this evil remedied by allowing the exportation of Negroes, and certain other commodities from our illands, to fuch
foreigu

\section*{BOOK II. CHAP. IX.}

195
foreign colonies, fince the fame foreign bottoms, which import provifions, melaffes, cotton-wool, and indigo, into our plantations, will undoubtedly endeavour to make bullion or fpecie the chief article of their return-cargoes. The bill therefore feems, on this prefumption, in an efpecial manner to favour the navigation and commerce of the Dutch, and fuch North-Americans as are, from the nature of their employment, adopted foreigners; who readily obtrude their veffels into an opening of this kind, and actually become the principal carriers of French fugars and coffee into the freeports, whence they carry a return chiefly in money or bullion for the French iflands. It was faid, that, if provifions are dear in our iflands, this happens from a peculiar obftacle, namely, "that the *6 North-American vefiels would willingly bring them as much as "\% they want, if they could but be fure of a back-lading; but that, ". from the difficulty of procuring one, they carry their provifions "6 to the French iflands, and fell them cheaper than they would at " our own, becaufe they can take in at the French iflands a back"6 lading of melaffes." This inconvenience was intended to be obviated, in part, by the latter of the acts mentioned, admitting the importation of French melafles into our iflands, which may help to load back the North-American veffels: but upon this it is rightly obferved, that the importation of their fugars pught likewife to have been allowed under certain reftrictions, and for feveral ftrong reafons; viz. the North-Americans would then have no pretence, nor indeed any adequate inducement, to go to the French illands for a back-lading; they would bring their provifions to a better market at our inlands, and be able to procure the very returns they want; for it is not to be fuppofed they refort to the French merely to take in their melaffes; the French fugars are their primary object, and furely they would rather receive them at Jamaica without rifque, than run the hazard of getting them clandeftinely from Hifpaniola. If we could become the carriers to Europe of all the fugars which the French iflands produce, it would certainly be very much for our intereft to become fuch; but, whether we are or not, their produce will find its way to the European markets, either in their own, or fome other bottoms.

Cc 2
We

\section*{J A M A I C A.}

We are then to confider, that the North-Americans are carriers every year of a certain proportion of their produce ; and in all likelihood will fo continue. The queftion therefore is, whether it would not be more advantageous for Great-Britain, that this produce fhould be firft brought into our own iflands, to be afterwards taken from thence to Europe by Britifh carriers? And it clearly appears to be fo, becaufe this double voyage tends to the employment of more Britifh fhipping. This hipping would receive all, or the greateft thare of, the freight, which is now paid to foreigners, or to North-Americans; befides the further benefit of fupplying fugars to thofe European markets which the French and Dutch at prefent monopolize. In refpect to our iflands, they would be more plentifully furnifhed with provifions, and be able to keep up their ftock of filver fufficient for circulation, or to remit the fuperfluity to Britain, inftead of feeing it drained away to the French iflands. Nor need the planters apprehend the lowering the value of their own produce. There may be, it is true, a greater quantity and affortment of fugars at their markets; but the increafe of demand, and of Thipping, to take it off their hands, muft neceffarily be in proportion; fo that the augmentation of one will keep pace with, and prevent any mifchief from, the increafe of the other. This point is regulated by the European markets, which will ftill require to be fupplied as heretofore; and the annual quantity fupplied for their confumption cannot be at all affected, whether it is brought to them from Hifpaniola, or from Jamaica. As this confumption is permanent, fo mult be the demand; both will co-operate to relieve the ifland-markets, whilft they have fhipping enough to facilitate the carriage to Europe ; and fhipping is naturally attracted by well-ftocked markets, and a certain and profitable freight.

Thefe motives, for permitting our own hips to carry French produce, with a view to improve our commercial dealings with the North-Americans, and re-eftablifh an export of fugars to the foreign markets in Europe, appear, I think, of fome weight, and merit ferious confideration ; in order that the feveral free ports, opened in this ifland, may become of more extenfive utility to the trade of the mother-country, than, in their prefent fate they feem capable

\section*{BOOK II. CHAP. IX.}
capable of. The act of parliament was certainly well-meant, but it has produced an effect very contrary, in fome refpects, to what was intended.

Of all the blunders committed by our ftatefmen refpecting co-lony-trade, none perhaps have turned out more injurious, than the branding his majefty's fhips and tenders, in the year 1764, with cuftom-houfe commiffioners, under pretence of rigoroufly executing the navigation-act; in confequence of which meafure, and the frict orders accompanying it, the Spanifh traders were wholly proferibed from entering the ports of this ifland. The folly and ignorance of thofe who projected and abetted this French-Spanifh fcheme caunot be more expofed, than by fhewing the lofs which Great-Britain fuftained in confequence of it, and which will appear from the following comparative account of the exports to Jamaica:
 This lofs, in actual diminution of exports, amounts, at a medium, to \(\mathbf{1 4 6 , 1} \mathbf{3 4}\) l. ferling per amum. But, when we take into the account what would have been gained on the return-cargoes, and compute the fuper-lucration on the prime-coft only at \(30 \%\) per cent. the lofs in four years amounts to upwards of 700,000 . . We may venture, indeed, without any exaggeration, to pronounce it neas a million. And, what is worfe, we have every reafon to believe, that France, by the immediate tranflation of this trade to her colonies, gained at leaft the full amount of what Great-Britain loft.

Second to this enormous meafure, were the orders given (rather unwifely) in a public manner, in November \(\mathbf{1 7 6 5}\), for the free admiffion of Spanifh veffels into all the colonies. Little regard was paid to this invitation by the traders.

Exclufit; revocat. Redeam? Non ; \(\sqrt{2}\) me obfecret.
"He" (the minifter) "kicks us out of doors; then he calls us ". back. Shall we return? No; not if he fhould intreat us ". on his knees."

\section*{J A M A I C A.}

The free-port act was then let go as the fheet-anchor. Great advantages would probably have refulted from this meafure, if it had been thought of and tried immediately after the war, inftead of commiffioning cruizers to deftroy the trade: and although it may have prevented a total wreck of this valuable commerce; yet it came perhaps too late, and under too many difadvantageous circumftances, to make any adequate reparation for the damages we have fuftained, and are ftill liable to fuftain.

The trading inhabitants of the ifland required nothing more than very frrict and pofitive private injunctions to the governor and port-officers, not to allow or to practife exactions upon thofe foreigners who came hither; whereby they had at different times been much difcouraged. The act of navigation, fo far as regarded thefe particular bottoms importing live fock and bullion, was always relaxed, and never rigoroufly obferved here; becaufe it appeared repugnant (fo far as regarded thefe imports) to the fpirit of commence, and the plain intereft of Britain. Thefe were therefore already free-ports in every beneficial fenfe; and the traffic went on in filence and fecurity. But fo foon as government interfered, with a view to do no more than was already virtually done, fo public a declaration of favouring this commerce, and laying open what ought to have remained clandeftine, naturally awakened jealoufy in the brealt of that power, whofe policy it has ever been to defeat and impede, as much as poffible, every fuch attempt. Guards, cautions, and penalties, were multiplied, and held to their vigilance and execution with fuch unabating feverity, as had never before been obferved.

What would be the confequence, if the port of Boulogne, or Dunkirk, in France, was to be opened by a public arret, exprefsly for the importation of fmuggled wool from Great-Britain? Surely, the whole Britifh nation would take alarm, and Britifh guardacoftas would immediately be commiffioned, without number, to prevent the effect which an invitation fo authoritatively given might be likely to produce. It is notorious, that large quantities of Portugal gold have been privately gleaned from Portugal, and brought into this kingdom. But, if government fhould, from a fond defire to fwell the tide, and procure the ftream to flow hither in

\section*{BOOK II. CHAP. IX.}
a publick channel, iffue proclamations for exprefsly encouraging the importation of gold coin from Portugal; is there any doubt, but every Britifh veffel, and their crews, would be fearched in the moft rigorous manner before they were fuffered to depart from Lifbon and Oporto? or may it not rather be queftioned, whether any Britifh veffel would ever be admitted to enter them again?

I have faid enough to point out the ill confequence of this meafure, and the ground of complaint among the Jamaica-traders, who are all fenfible that, inftead of being ferved by it, they have loft what perhaps may never be retrieved. And, unfortunately, things are fo circumftanced, that a repeal of the free-port law would only tend to make bad matters worfe. We muft therefore leave it to the operation of time, and the dexterous management of thofe parties who are to be reciprocal gainers by this traffic, to revive it again extenfively. It is a very juft obfervation I have fomewhere met with, that, confidering the native wants of Spain, the vaft expences fhe is at in endeavouring to prevent her colony-fubjects from fupplying themfelves with various conveniences in a clandeftine manner, which they cannot procure, at leaft in fufficient quantity, or equally cheap, by any other channel at prefent ;-That, notwithftanding all thefe precautions, no lefs than fifteen millions of every annual cargo have been fuppofed to belong to foreigners; and that it is, in every view, fo much for the intereft of that nation to cultivate the friendfip of Britain, and admit the latter to a fair and regular commerce by treaty:-Thele circumftances confidered, it is amazing that fhe fhould rather have chofen to reject what might fettle a perpetual harmony between the two nations, and to perfift in thofe ftubborn maxims, of whofe inefficacy the has had fo long and uniform an experience. It is in vain for her to expect, that her numerous fubjects here will obey thofe refcripts, in the breach of which their natural wants, as well as their intereft and inclination, concur. Inftead of an equitable tariff, admitting the free importation of certain enumerated goods and manufactures from Britain; The has often unneceffarily infulted and provoked its vengeance: and the iffiue of all her quarrels has only ended in wafte of her treafure, lofs of thips, and the affording more convenient opportunity for the fubjects on both fides to profecute that

\section*{J A M A I C A.}
very intercourre which fhe meant to obftruet ; infomuch that it never has attained to fo flourifhing and active a flate as during the time of open war. By a different fyftem of policy, the might have enjoyed a ffrict alliance with the greateft maritime power in the world, capable and ready to fight her battles, and defend her againft the united forces of all the other European ftates; whofe merchants might have largely augmented her revenue \([f]\), by regular payment of the bullion-duties, and have united with her in keeping off every interloper; for it had then been their intereft to put a ftop to every inlet of contraband traffic, and make every return which honour, good faith, and gratitude, could prompt. Thus might Spain, inftead of being one of the pooreft, become one of the richeft and moft refpectable powers in Europe ; if it were not for the infatuation of thofe impolitic counfels which fo long have kept her at variance with Great-Britain.
But it is now time to return to Savannah la Mar, hitherto the metropolis of Cornwall; though Montego Bay feems to tread clofe on its heels, and in a few years will probably difpute this pre-eminence. The number of veffels which enter and clear here is from fixty to feventy per annum; and the tonnage, exclufive of coafters, has by fome been computed per average at eleven thoufand five hundred. The town, not many years ago, poffeffed a very flourifhing trade. It is fituated commodioufly for a correfpondence with Truxillo, Honduras, and the Mofquito-fhore ; being not more than one hundred and five leagues from the bay of Honda, and the paffage equally fhort and fpeedy, as the trade-wind ferves both in going and returning. Near this tract lie, fcattered along, the little cayes and iflands of Serranilla, Quitofveno, Serrana, Roncador, Sancta Catalina or Old Providence, and St. Andreas, \&c. Serrana took its name from Auguftin Pedro Serrana, who was wrecked upon it, and lived here feven years. Sancta Catalina was a celebrated place of refort for the buccaneers, is about fifty leagues from Cape Gracias a Dios, and contains feveral good harbours; for which reafon it feems a very proper fation for fmall cruizers in war-time. The cown, at prefent, is but fmall, confifting only of one tolerable ftreet, and about fifty or fixty fcattered houfes. Moft of the pro-

\section*{B OOK II. CHAP. IX. 201}
duce of Weftmoreland, befides fome of what belongs to St. Elizabeth and Hanover, is Chipped from this port. Underneath the court-houfe, or hall of juftice, are the barracks, capable of receiving feventy men, and garrifoned with a company of the regulars. The fituation, in point of health, is by no means approvable; for to the Weftward of it lies a tract of undrained morafs, at leaft feven miles in length, which at certain times of the year cannot fail of producing mifchievous effects. It is overfpread with mangroves, and below the level of the fea, and therefore not eafily to be drained. Cabarito Eaft River difcharges its ftream into it, and contributes by this means not only to feed the lagoonwater, but in fome degree to refrefh it. Whether the river could be converted into a drain, by banking and retrieving the ground on each fide, is a point I cannot determine ; but it may be worth examination. This river has two good bridges of timber acrofs it, and is navigable in boats about twelve miles inland to a public barquadier at Paul's ifland. The land on which the town is built is flat and low, fubject therefore to thofe exceffive heats and putrid vapours, which, in the months of July and Auguft, occafion fatal maladies in habits unfeafoned to fuch places of refidence. In 1768 , a very neceffary act was paffed, the better to fecure this town from accidents by fire. Coopers were prohibited from making fires except within an inclofed yard, furrounded by a brick or ftone-wall of eight feet height, having only one door, and that placed to the Weftward; and the magiftrates were empowered to caufe all huts and other buildings covered with thatch to be pulled down. The hamlet of Queen's Town ftands about two miles North from Savannah la Mar. It confifts of a few houfes tolerably well built; but is a place of no note as yet. This is more ufually called Beckford Town, or Savannah, the land having been given in lots of from five to twenty acres by the late Richard Beckford, efq; and regularly laid out for ftreets, with a large fquare left in the centre for a church. At the Weft end, between the two capes of Negril, is Long Bay; where is good anchorage, and fhelter from tem. peftuous winds. It is conveniently fituated for our men of war, during any rupture with Spain, to lie in wait for the Spanifh veffels paffing to or from the Havannah; and here admiral Bembow colVol. II. D d lected

\section*{J A M A I C A.}
lected his fquadron in 1702, when he was looking out for Du Caffe. It is not as yet made convenient for thipping of produce, being rendered almort inacceffible on the land-fide by means of a large morafs, extending the whole length, comprehending upwards of fix thoufand acres, which in time may probably be drained and cultivated, as the Black Morafs which lies near the centre of the pariih has fuccefsfully been. It contains large quantities of grafs, boar-wood, Santa Maria thatch, and mountain cabbage trees; and is interfperfed with fmall iflands, full of bread-nut and other hard timber trees, and fome mahogany; which prove the foil to be very deep and rich. Three ftreams, or rivulets, take their rife in it, and empty themfelves at Negril Harbour, and Long Bay. When the wind fets hard-in upon this part of the coaft from Weft and North-Weft, they are frequently repelled; and by this means overflow the lower grounds. Yet the draining of this tract appears extremely practicable, and by means of the rivers, if proper floodgates and banks were formed, after the method practifed on the flat coafts of Lincolnfhire and Suffex. The Eaftern range of the morafs has a fine, fubftantial clay; but the part neareft the fea is of a loofer texture, though poffibly it might become more folid, if it could be reclaimed from the water, which at prefent faps and oozes through it. It is the refort of wild pigeons, and hogs, in great abundance; and the rivulets are ftored with plenty of excellent fifh and land-turtle.
This parifh has a chapel for performing divine fervice, though fcarcely opulent and populous enough to afford a good church. The chapel is built with timber, and ftands in the favannah, about the diftance of one mile from the town of Savannah la Mar.
Some years ago, there was an exceeding good church, of white free-fone, built in the form of a crofs, about feven miles from the bay: but the parifhioners falling into a violent difpute, whether they thould repair it, or erect a new one at Savannah la Mar, the roof was unable to wait the iffue, but tumbled in ; and, the point not having fince been brought to a final determination, it remains a ftately ruin, to add one proof more to the million of the deplorable effects which attend religious fquabbles. As the two parties could not agree, the church (which formerly was no uncommon

\section*{BOOK II. GHAP. IX.}
cafe) feems to have taken the decifion upon itfelf, and by wilful dilapidation endeavoured to convince them, that it will at leaft be the cheaper plan for them to build a new tabernacle than repair the old one. As no houfe of refidence has been provided for the rector, he receives \(50 \%\) a year in lieu of one. The rector's ftipend is \(250 \%\); but his whole income has been computed at not lefs than \(700 \%\). In the year 1710, a Mr. Thomas Manning devifed the bulk of his eftate to truftees, for the purpofes of founding a free-fchool near Beckford Town, maintaining and educating poor children of the parifh till the age of fourteen. In 1738 , an act was paffed for more effectually executing this charitable bequeft. The truftees were incorporated, empowered to build a fchool-houfe, receive children, appoint tutors, and prefcribe rules and orders, under a common feal, for its better government. I fhall take occafion hereafter to offer fome remarks in regard to this and other fimilar foundations, which have not in general anfwered the good ends of their inftitution.

In the Eaft part of the parifh, near Scot's Cave, were fettled the Surinam planters in 1675 , and in 1699 the remnant of the Scotch Darien colony, who may now be traced by the names of feveral fettlements hereabouts, as Culloden, Auchindown, \&c. From the former, this divifion was called Surinam quarters. The favannahs, or low lands, of Weftmoreland are in general rich and fertile, but, if neglected for any time, become as much inferted with logwood as thofe in St. Catharine's are with the opopinax. The air of thefe parts is hot, but tolerably healthy, except near the fhore. The Eaft and North-eaft diftrict, being very mountainous, is not yet peopled. Towards the Weft, or land's-end, the hills diminifh. Many of the planters houfes are fituated on thefe eminences, and enjoy a very pure and healthy air, though fubject to very heavy and frequent rains, occafioned by the collection of vapours, blown hither from the Eaftward, over the whole length of the ifland, by the trade-wind: thefe are often impeded in their courfe, either by the high ridges, or Wefterly airs, and then they fall very copioully. This plentiful irrigation, though productive of fome inconveniencies, yet conduces to the fertility of the plantations, and fecures their crops with fo much regularity and cer-
tainty,

\section*{J A M A I C A.}
tainty, that it may be efteemed one of the moft eligible for fugar in the whole inland, both in regard to quantity, and excellence of quality.

On leaving Savannah la Mar, the road to Hanover croffes Cabarito River twice, at no great diftance, by two bridges, about eight or nine feet wide, conftructed with planks laid acrofs fome beams, but unprovided with any fide-rails to guard paffengers from tumbling over. This river takes its rife among the Hanover Mountains, a little to the Eaftward of King's Valley. At Black Morafs it feparates into two ftreams, one of which empties itfelf into the fea at Savannah la Mar, as already mentioned; the other, a little to the Weftward of it. Thefe ftreams, although they run upwards of eighteen or twenty miles through the country, are neither of them navigable, except for canoes. From hence to Albany plantation the way is, in general, very flat, confined, and fwampy. This brings us to the Delve barracks, which were built in confequence of the infurrection in 1761 , and capable of accommodating one hundred men. They are fituated near the foot of Hanover Mountains, tolerably well conftructed, and judicioufly pofted. They ftand on a dry fpot near the dividing line of the two parifhes, three or four miles diftant at leaft from the morafly ground of Negril, and are well enough contrived to anfwer moft of the purpofes for which they were intended, being fufficiently ftrong to refift any force that a band of rebellious Negroes could bring againft them. They are alfo built in a place moft likely to be infefted with fuch difturbances; for it is a part of the country where there are a great multitude of flaves, and few proprictors of eftates refide; and where the neighbourhood is filled with woods and thickets, that might the oftener tempt them to mutiny, by the fhelter they afford, if they were not kept in awe by thefe barracks, from which a fmall detachment might harrafs and prevent their committing any extenfive outrages. This building is, however, defective in fome refpects. The hofpital for the fick is only divided from the cornmon room by a boarded partition, full of chinks; by which means there is a continual paffage open for malignant and noxious effluvia to infect the healthy. The number of loop-holes is likewife too fmall, there not being more than five or fix; fo that very little annoyance
annoyance can be given from it in cafe it thould be clofely befieged. The window-hhutters are of bullet-tree-wood (fo called, becaufe an inch-board of it is bullet-proof) ; but, if thefe windows are to be opened in the time of attack, in order that the garrifon may fire upon their enemy, which they could not otherwife do, for want of loop holes, their bodies muft neceffarily be much expofed, and the thutters of no ufe to fkreen them. The roads, for three miles after leaving Albany, afford a profpect delightfully variegated. Towards the North, the late commodore F-rr-ft's plantation, and feveral others, are feen ftretching along the fkirts of the Hanover Mountains, which are juft behind, and feem to over-hang them. The ground towards the South appears uneven, poor, and of a reddifh foil; full of brakes and irregular clumps of trees, and uncultivated; ferving only to feed a few young cattle that graze feantily among the bufhes. Point Negril lies about three or four miles Weft of Albany. The moraffy land embracing it renders the air of the adjacent eftates damp and unwholefome. Eaftward, the view is terminated by another range of mountains, covered with a foreft of mahogany and other gigantic trees. Between thefe different mountainous barriers lies the road to Hanover, through the fertile glade called King's Valley, which exhibits a lively and picturefque feene. Though not above half a mile acrofs, it is inimitably contrafted throughout. It abounds with delicious fprings and cooling rivulets, refrefhing the land through which they glide. The lofty mountains on either fide twice every day extend their grateful fhade over the whole, and veil the richly-cultivated fields below from the fun, preferving the canes from taint in times of drowth, to which the champaign lands, in many parts of the ifland, are much expofed. There are, befides, in this fequeftered vale, two or three finooth fugar-loaf hills, that rife to confiderable elevation, and whofe ever-green and floping fides yield pafturage to numerous herds of cattle.
The whole machinery of this charming fpot is highly pleafing; for, abftracted from its natural beauties, it is decorated with fome handfome plantation-houfes; at one of which (called Glafgow) fituated on a rifing ground, is a battery which was of great ufe in protecting the eftates here during the Negroe rebellion.

\section*{J A M A I C A.}

From hence the road into Hanover is by a fteep afcent, or rather pars, of about a mile in length, fo narrow, that two horfes can fcarcely go a-breaft. From the fummit of it, the eye takes in, at once, a rural fcene enriched with every embellifhment of art and nature. The landfchape is inimitably fine, and mocks defcription: canefields, villas, paftures, clumps, groves, and rivulets, are promifcuoully fread over the whole of its fwelling wavy furface. Thefe extend two or three miles from the centre of the profpect, having about one-half filleted, as it were, with a range of hills enveloped with thickets, and a fhaggy mantle of venerable trees; the other, ikirted by the Weftern ocean. This diftrict of the parifh exceeds moft others, as well in the configuration and wild arrangement of all its parts, as in the peculiar nature of its foil, which is a kind of fuller's-earth, foapy and rich; fo congenial to the fugar-cane, that a long and uninterrupted culture feems not in the leaft to have exhaufted, or even impaired, its fertility. The fugars made here moft refemble thofe of Liguanea, remarkably fine, and inferior to none in the Weft-Indies. But I fhall not antisipate further the defcription of Hanover parifh.

State of the Parifh :
Annual Produce.

There needs no other proof, to fhew how greatly it has improved of late years. It is very capable of being advanced fill further in its product, if breeding-penns thould ever be formed in the North-eaft mountains, and the lowland-penns be converted into fugar-plantations. The road, which has lately been compleated from Deane's Valley, in this parifh, to the Bogue in St. James's, is fkilfully conducted and well-finifhed, and will probably invite the proprietors of land, contiguous to it on each fide, to open and fettle their lots. This road is now the grand communication be-
tween the two parifhes, and extremely convenient to both, as the affize-court is held at Savannah la Mar.

The uatural curiofities in this parifh, hitherto difcovered, are but very few; though the want of them is, doubtlefs, compenfated by the variety of its natural beauties, in point of wood, water, and profpects. At Ricketts's Savannah, in the Weftern diftrict, two mineral fprings were difcovered not long fince. A gentleman of the faculty, who tried fome experiments upon them, affirmed, as I am told, that they were not inferior to the celebrated Geronftere fpa; and that, on being adminiftered, they have proved efficacious in the fame diforders which that fpa fo fuccesffully: relieves.

\section*{S E C T. III.}

THIS parifh is bounded on the Eaft by Great River, which divides it from St. James; on the Weft and North, by the fea; and on the South, by Weftmoreland. It was not formed till the year 1723 ; when it was taken out of the laft-mentioned parifh. It contains feveral rivers, but none of them remarkable, fcarcely any rifing more than four miles from the coaft. The principal headlands are North Negril and Pedro on the Weft, and Roundhill Bluff on the North. Proceeding from Weftmoreland, the firft thipping-place we meet with is Orange Bay, lying within North Negril, a capacious road, and good anchorage. About a league North from this, lies Green Ifland Harbour. But the chief barquadier is at Sancta Lucia Harbour, about ten miles further on the North coaft. Green River is navigable by boats upwards of two miles, and has many agreeable meanders, affording as many different profpects. Its banks are cloathed on each fide, either with groves of plantain, banana, and other trees, or with fugar-canes, to within about half a mile of the mouth, where the breadth expands to fifty feet at leaft; and it falls over a little fhatlow bar into the bay; here the fides are moraffy, and have rather a wild and unpleafing appearance. Green Ifland Harbour and Orange Bay are the moft North-weftern parts of Jamaica. The former takes
its name from a little ifland at the offing, about half a league diflant from the main land. On the Weft fide of the harbour is a fimall battery of niue guns, fix-pounders, to guard the entrance, and is kept in excellent order; but if, inftead of the battery, a fort had been erected here, inclofing the barrack, a gariifon of forty or fifty men might hinder any privateer, or fmall thip of war, from croffing the bar, and landing their crew ; but, whilft it continues open towards the Weft, it is liable to furprizes. Befides the nine guns mounted at the battery, there are tivo more at a diftance from it, near a fmall tavern, where the main battery was firf intended; and eleven embrazures completely built.
North-eaft from this harbour is another fmall bay, commodious enough for fhipping; on the Weft fide of which is a ftrong battery, of feventeen or eighteen guns, built and maintained at the private expence of Mr . J-s, whofe eftate lies contiguous. This battery has embrazures for twenty-one guns; and thofe already mounted are fix and nine-pounders.
Not far from hence is Orange Cove, near Point Pedro, a part of Hanover, beautiful beyond defcription. So various, fo pi¿turefque, and admirably fine, is the combination of all the detail which unites in forming this landfchape; and the whole fo nicely interwoven and difpofed; that it feems almoft impoffible for cither painter or hiftorian to give any thing like a faithful fketch of it. Here has nature exerted all her plaftic powers, in laying out and arranging the ground-work ; and art has likewife put forth her whole fkill, in vying with or affifting her in the machinery, compofed of a thouland decorations. Wherever the paffing eye delights to wander, it meets with a fucceffion of objects, throughout an extent of many miles, equally new, friking, and lively. In one divifion is feen a wide plain, richly carpeted with canes of the emerald tint, differently fhaded, and ftriped with fringes of logwood, or penguin-fence, or, inftead of this border, with rills of cryftal water. In another rifes a high-fwelling lawn, fmooth and fertile, whofe gently-floping bofom is embellifhed with herds and flocks, and whofe fummit is crowned with Negroe-villages, or clumps of graceful trees. Here, on a neighbouring hill, is a windmill in motion; boiling-houfes, and other plantation-buildings, at
the foot: there, in the various duties which cultivation excites, are labourers, cattle, and carriages; all brifkly employed. In ad. dition to thefe animated fcenes is a boundlefs profpect of the fea, which fkirts the diftant horizon towards the North; and, on the other hand, a wood-capped battlement of hills, that fhuts in the Southern view. Delicious as the face of this part of the country is, it fcarcely exceeds in beauty the profpect of Lucea and its environs. The harbour at the entrance is half a mile acrofs; and, continuing its channel for about one mile inland, expands at once into a circular bafon of nearly the fame face in diameter every way; the anchoring-ground every where good, and depth of water from four to fix fathom.

The town is inconfiderable, confifting only of one large ftreet, and about forty or fifty fcattered houfes. It ftands on the SouthWeft fide, upon a fwampy bottom; but no part of it is feen from the road, until it is actually entered. The land behind and on each fide is hilly; fo that the view from it is only open towards the water. Two or three rivulets creep through it, more noifome than the antient canal of Fleet-ditch. At the bottom of the harbour, the Eaft and Weft Lucea Rivers difcharge their ftreams. Though raifed to the dignity of a free port, its trade as yet is not very extenfive. The number of veffels which enter and clear here may be reckoned at about fifty to fixty fail per annum; but the harbour is very capable of receiving three hundred top-fail fhips at a time, were there but inducements to attract them. During the laft war, this town carried on a very active trade; but this has been difcousaged fince by captures and other loffes; fo that at prefent it is far from being in a profperous condition. The prefent fituation is illchofen, and naturally unadapted for healthful refidence. But the port is conveniently fituated for traffic with the South-Weft parts of Cuba; and, enjoying as it does fo fine a receptacle for fhipping, it is well deferving of the public patronage. The fort, which commands the entrance, ftands on the Weftern point, a fmall peninfula, and is built on a rock, rifing about twenty feet above the level of the fea. It is very compleat in its defences, having embrazures for twenty-three guns, of which twenty are mounted from fix to nine-pounders, and in good condition for fervice; fo that it is caVol. II,

E e
pable

\section*{J A M A I C A.}
pable of making a tolerable refiftance. The barracks for fifty men are at a fmall diftance to the Southward. Thefe, like the others before-fpoken of, are feparated only by a boarded partition, full of holes, from the hofpital, which is very inconfiderately placed at the windward-end; fo that a large quantity of the foul putrid air, proceeding from thofe who are unhappily affected with any virulent or epidemic diftemper, is immediately taken into the lungs, and refpired by thofe who are, and probably might otherwife long continue, in found health. The houfe defigned for accommodation of the officers is, with as little propriety, erected to leeward of the barracks, kitchen, and other neceffary offices; whence all the foetid effluvia, that reek from thefe fources, are wafted upon thofe who are ftationed here in garrifon. A want of proper regulation in thefe particulars is but too common in moft of the maritime barracks throughout the ifland; and not only the poor foldiers, but the ifland itfelf, may fuffer greatly, if it fhould not be remedied. The circumftance has been overlooked perhaps, as generally is the cafe in this country, where the genuine parents of ficknefs are not frrupuloufly traced out. But it is to this miftaken difpofition, I am perfuaded to believe, that the unhealthinefs of the garrifon, at particular times, has been chiefly owing; for, fuppofing only one or two men to lie fick in the hofital of a malignant fever, they may contaminate the atmofphere fo much in twenty-four hours, as to render it morbid and infectious to the healthy who are lodged in a fituation to be fufceptible of its pernicious effects. This misfortune actually befel the garrifon in i764, compofed entirely of men newly-arrived from Europe. One or two falling fick of putrid fevers, the diforder foon grew epidemic. Thofe who probably would have efcaped (at leaft any bad fymptoms) if they could have breathed a refrefhing air, were poifoned with the ftench of the hofpital and offices; and feveral were feized with fevers of an anomalous kind, which feldom or never occur unlefs from fome fuch pre-difpofing caufe. In fact, the ficknefs fpread fo rapidly, that, in a fhort time, hardly ten men of the whole company were able to do duty. Errors of this nature, though apparently trivial in the opinion of many, ought not to be flighted, when the value of mens -ives comes to be rated. And, funce the modern difcoveries of
learned phyficians have taught us to confider a vitiated air as a principal agent in the acute difeafes moft common to hot climates, the publick of the inland fhould, as far as poffible, endeavour to alleviate this inclemency, and confult the prefervation of health and vigour among thefe detachments at the out-ports. Good fenfe, humanity, and a regard to their own fecurity, all confpire to enforce this recommendation. Situated on an agreeable foot, about half a mile from the town, and near the fort, is the church, built a few years fince by the parifhioners, at the expence of \(7000 \%\). and upwards. It is a plain, neat building of brick, decently pewed, and provided with every convenience fuitable to the good purpofes for which it was intended, except bells, though the tower is capacious enough to hold a ring of five or fix. The living, perquifites included, is efteemed worth about \(400 \%\) currency. On the oppofite fide of the harbour is the Point Plantation; diftinguifhed for its fine fituation, commanding the town, fort, church, harbour, fhipping, and a diftant view continued for many miles over rich cane-fields and a country moft elegantly diverfified; fo that few parts of the ifland prefent a greater affemblage of delightful objects in one profpect.

Here, as well as at Greenwich, in the neighbourhood, and moft of the frontier plantations near the North coaft, are fmall batteries, erected at the private expence of the refpective owners of thofe plantations, which in time of war fupply the want of king's thips, and are of ufe to intimidate the privateers from landing, to carry off Negroes, cattle, and other moveables.

The face of this parifh is, in general, hilly ; and, towards Weftmoreland, it is flanked with that ridge of mountains common to both. The air is efteemed healthy, and will be more fo, when greater progrefs is made in cutting down its woods; the Eaftern and South-eaft divifion not being as yet occupied with any fettlement.

Lucea has a cuftom-houfe, under direction of a collector and comptroller.

Confidering Hanover as a modern parifh, it has advanced furprizingly, and contains more fugar-works than fome of three times the extent; which is a fure proof of the fitnefs of the foil for this cultivation. There are few other in the ifland that, in the fame time (little more than thirty years), can boaft of having increafed their ftock in the proportion of four to one; which is actually the fact in refpect to Hanover; fo that it bids fair to vie with thofe efteemed the richeft in Jamaica.

S E C T. IV.

\section*{St. J A M E S.}

THIS parifh is bounded on the Eaft by Trelawny; Weft, by Hanover; North, by the fea; South, by St. Elizabeth. The principal rivers are Great River, on the Weftern boundary; Marthabrae, on the Eaftern; and Montego, which falls into the bay of that name. Great River rifes in the furtheft Southern extremity of the parifh, meandring a courfe of about thirty miles, and, collecting fome other ftreams in its way, grows pretty large where it difembogues into the fea at the Weft angle of the bay, and about five miles from the town of Montego. This river is the natural boundary between this parifh and Hanover; but, although it is pretty wide at its mouth, and penetrates fo confiderable a way into the country, it is at prefent not navigable above three or four miles, and that only for boats and canoes. At the mouth it is croffed by a ferry.

The Montego River falls into the Bay about three quarters of a mile Weft from the town. The coaft of this parifh has no headland of any note, nor any harbour, except Montego; but this is very fufficient. The extent of the parifh from North to South

\section*{BOOK II. CHAP. IX.}
being near twenty-four miles, it contains of courfe a large run of unfettled lands. The fettlements reach between thirteen and fourteen miles back from the fea: but there is a fpace ftill behind them of one hundred thoufand acres, or upwards, yet uninhabited, except by the Maroon Negroes, of Furry's and Trelawny Towns; who poffeffing a grant of fifteen hundred acres, there remain about ninety-eight thoufand for cultivation. This land is mountainous, but faid to be inferior to none in fertility; and, as St. James is now become the moft thriving diftrict in the ifland, fome extenfion will probably be made every year. One great fource of this flourifhing ftate has been the rapid increafe of the town and its trade from very fmall beginnings. It contains at prefent, by computation, about four hundred houfes, moftly built of brick, and fome of them inhabited by opulent merchants; one of whom carried on the Guiney branch with fo much fuccers, as to remit bills, in the year 1771 , to Great-Britain, for near 50,000 /. Aterling, on account of new Negroes alone ; and, as only two of thefe bills (which were both under \(300 \%\).) were protefted, we have, in this inftance, the ftrongeft indication poffible of the happy circumftances enjoyed by the planters in this part of the country. The town, fituated in about \(18^{\circ} 30^{\prime}\) North latitude, ftands on the North-eaft fide of a fpacious bay, along the feet of a range of moderately hilly land, which fomewhat incommodes it by intercepting the breeze. The ftreets are laid out with tolerable exactnefs. In the bay, the water is from four to thirty fathom: the channel leading into it is guarded, on the Eaft and Weft, by a reef and funken rocks; but far in there is excellent anchorage, and room for a large fleet of fhips. On the South-weft part of the bay is a clufter of little iflands, covered with mangroves, and other maritime trees. Beyond thefe iflands is another fpacious harbour, but of no ufe at prefent; fince it is impoffible for any veffel of burthen to fail into it, on account of the fhoal-water on one fide, and the iflands on the other: though it is alfirmed, that a paffage between them might be opened at no very great expence. It is likewife fuppofed to be defended by the fort (fituated about half a mile from the town to the North-caft, on a fmall point of land), which mounts fome guns, and may be occafionally garrifoned by a party of regulars,
for whofe reception the parifhioners erected barracks capable of holding one hundred men, with their officers. As the fituation of thefe barracks is high, and on a rock by the harbour-fide, they would be pleafant and healthy, if the trees and buthes, which are fuffered to grow fo luxuriantly near them, were cut down; and if a further improvement was made in refpect to the accommodations provided for the officers, which are very inconveniently placed. The fort is, or lately was, in a fate of decay; and fcarcely deferves to be rebuilt, as it does not, from its fituation, appear to have been ever capable of guarding the entrance; fince, at the fot where it now ftands, the channel is fo wide, that any veffel might enter the bay without danger from its artillery, and afterwards come to anchor unmolefted. The guns (eleven in number) are of too fmall a fize to range a fufficient diftance, and (what is ftill worfe) fo ho-ney-combed and ruft-caten, and fo crazily mounted, as to make it dangerous to fire them; which was fatally experienced by a gunner, who was thattered to pieces on letting off a feu de joye after the furrender of the Havannah to the Englifh forces. Though a more eligible fpot may be appropriated to the next fort, and though the prefent is not worthy to be rebuilt, I muft take leave to fay, that thefe ruins, like others of a fimilar kind in many defencelefs parts of the ifland, have happened chiefly for want of a trifling fum every year expended in neceffary repairs, and particularly the painting, or tarring, the guns and their carriages. In truth, the fortifications planted about the harbour of Port Royal and Kingfton, being the only ones which receive an annual vifitation from the commiffioners of forts and fortifications, are kept in better repair than any other; and, becaufe there was a time when no other part of the inland was fortified, or of fo much importance as that diftrict, it is therefore ftill the cuftom to expend the whole fortifi-cation-fund, and feveral thoufand pounds more per annum, upon them; while others at the out-ports are utterly neglected, and left to be kept up at the expence of private perfons, or of the parifhes in which they have been erected, and where the inhabitants are glad, on every convenient occafion, to leffen their affeffments as much as they can, and perhaps take no thought about their forts and batteries, except in time of actual war. This proceeding of
the legiflative branches is much the fame as if a man, by clapping a helmet upon his head, fhould think himfelf perfectly invulnerable, though all the reft of his body remains expofed. But, in order to maintain thefe defences along the coant, which are neceffary, not only to fuch parifhes, but to the whole inland; the affembly, we may venture to think, might every year call for an exact and faithful report of their condition; and, if no portion can be fpared out of the fortification-fund, the juftices and veftry might at leaft be obliged, in the more opulent of thefe parithes, to raife a fmall annual fum, by fome eafy and permanent mode, which fhould conftitute a fund to be applied folely to the repair of their refpective fortifications.

Thefe fentiments arife from confidering the improved fate of Montego Bay; the vaft value of its trade; its buildings, rents, goods, and fhipping; the opulence which is likely to centre in it; and the hazard to which all thefe may become expofed, on any fudden revival of war, from the attacks of a few daring privateers. As it is now, with juftice, deemed the emporium of the Weftern part of the ifland, it certainly merits to be well guarded, and indeed feems entitled to come in for a yearly thare of the public money, which hitherto has been partially lavifhed upon the environs of one principal port, as if they were the only quarters which an enemy could attempt, or that were worthy of the public defence.

Montego Bay, in the opinion of the beft judges, is growing very faft into a place of fo much confequence and wealth, that, in the event of a war, it will be a capital neglect of government, fhould it be left unprotected by aftrong fort, or one or two men of war for guard-mips.

The fhipping of every kind, that enter and clear at this port, are, one year with another, about 140 fail per annum, and continually on the increafe; as it not only lies fo commodious for foreign trade, but employs near about eleven thoufand tons for the products of the adjacent diftrict; this being the great mart for fupplying it with Negroes and other neceffaries, that formerly ufed to be bought at Kiugton, which has therefore fuffered a fevere blow from this new eftablifhment. For the like reafon, among others, the town of

\section*{J A M A I C A.}

Lucea has made fo little progrefs; the chief trade and bufinefs for the Northern leeward part of the ifland being engroffed and concentered at Montego.

The eftablifhment of a trading town neceffarily attracts artificers in various branches, and other numerous dependents. Hence a great convenience refults to the fettlers around in the country-parts, from the eafy method by which they can accommodate themfelves with what they want. But a far greater advantage accrues to them from the yearly confumption of their products in fuch a town, which gives birth and fupport to a multitude of petty fettlements for cultivating provifions of different forts to anfwer that confumption. Such a town muft therefore add confiderably to the population of the country; and itfelf derive a reciprocal profit from the fale of goods to, and tranfaction of bufinefs for, the more opulent plantations, which furnifh ftaple or exportable commodities; and this profit will be large and durable in proportion to the fertility of the neighbouring foil. Now, the lands in this parifh being very productive, and fo many thoufand acres ftill remaining to be hereafter gradually employed, here feems to be a morally certain profpect, that thistown, being conftituted upon the moft permanent fupports, can never decline fo long as the ftaple products of the illand are worth any thing at the home-market.

I have elfewhere taken notice of the rapid augmentation of fettlements in this part of the country of late years; which is really amazing, and will fo appear from the comparative table, that, like the foregoing, is brought down no lower than the year 1768 : but I am well informed, that at leaft twenty or more fugar-works may be added to the lift at the prefent time.

Behind the town, to the Southward, is a long range of uncultivated mountains, clad, like moft others in this country, with lofty trees. The road which croffes this to Montpelier is excellently conftructed, and opens an avenue into a vale behind, containing many thoufand acres of rich foil, a fmall part of which only is at prefent brought into culture. But, as improvements are moving on here at a furprizing rate, there is good reafon to believe, that the whole of this fine tract will, in a few years, be overfpread
with canes, and make a prodigious addition to the exports and imports of this parifh.

The land towards the Eaftern diftrict of it is of a reddifh caft, and fingularly porous quality, lying on a clayey fubftrate, excellently well adapted to the fugar-cane. Towards the Weftern parts it has more of the loamy foil, but not much lefs fertile. The produce of lands here in general is really amazing. I have been told the following anecdote in confirmation of this remark. A perfon rented a tract from the proprietor on a leafe of eleven years, conditioned to furrender it back, at the expiration of the term, compleatly planted with canes, \&c. and furnifhed with proper works. But, before the term expired, the leffee is faid to have gained by the bargain a clear profit of \(30,000 \%\) Others, from the very meaneft and fmalleft beginnings here, have acquired very large fortunes. It is related for a fact, that a poor man and his wife, poffeffing a grant of a fmall parcel of land, planted fome part of it in canes with the labour of their own hands. From thefe, when they were ripened, they made hift to exprefs the juice, which they boiled in an old cauldron, and manufactured a little fugar, with which they went to market. By degrees, and the inceffant application of their induftry, they augmented their produce, till they gained fufficient to purchafe a Negroe. By the fame means, they increafed their labourers, and the importance of their eftate; till, at length, they became proprietors of a valuable fugarwork, which is now enjoyed by the furvivor, and by the moft honourable title.

It is impoffible to particularize the various natural productions of this parifh, fo fmall a fection of it being as yet laid open to view; but, from what has hitherto been difcovered, it is wanting in no article conducive to the pleafure and convenience of the inhabitants. In moft parts it abounds with excellent ftone both for lime and building; and in fome, as about the neighbourhood of Montpelier, what is obtained from the quarry, refembles that of St. Anne be-fore-defcribed, whofe texture, when firft dug, is fo foft as to be eafily worked with the faw, or the chiffel. It remains, for its fur. ther better population, to form two good roads of communication, one leading into Weftmoreland, the other to St. Elizabeth's. The former is at prefent well attended to ; but the latter, by the way

Vol. II.

\section*{J A M A I C A.}
of Chefferfield, has been thought ill conftructed, and inconvenient on other accounts, as it paffes over a great deal of boggy land, and very fteep hills. It has therefore been propofed to lead the road from Montego Bay, through Spring-mount eftate, into Hardyman's penn; thence to Ellerflea plantation, to Naffau, the centre and moft thriving part of St. Elizabeth. It is faid, that the land, through which this road would go, abounds in fine materials to render it firm and durable; that it could be made fit for carriages from the bay to Ellerflea for \(1600 \%\). and would be the beft way for travelers from Hanover and St. James to go to Spanifh Town, being only a day's ride, or fixty miles extent, over level grounds, from Spanifh Town to Naffau, and thirty-fix from thence to Montego Bay ; in all ninety-fix : finally, that, by opening fo eafy an intercourfe between the feat of government and the Weftern parts of the ifland, now advanced into fo flourihhing a fate, a multitude of conveniences and benefits might be expected to refult to the whole inland; of which latter pofition there can be no doubt, if the former ones are as practicable as they appear plaufible; fince a commercial ifland, like the human body, will always enjoy the beft health and moft active vigour, when the circulation is carried on, freely and without impediment, from the heart to the extremities, and back again from thefe to the heart.
As St James was but recently divided into two parifhes, I am obliged in the table to confider it as ftill indiftinct, to make the detail comply with the former eftimates: however, I fhall endeavour alfo to form another ftate of the number of Negroes and cattle contained in it, as diftinet from Trelawny. State of the Parifh:

\section*{BOOK II. CHAP. IX.}

The progrefs therefore of this parifh, for the time, exceeds that of any other in the ifland; and at prefent it takes the lead of all, the annual produce of fugar being at leaft twelve or fourteen thoufand hogfheads.

The hills in general near the coaft, and to fome diftance from it, are rocky, but bear good provifions. The canes are planted in the glades and richer patches, and yield a very excellent fugar. This, being the moft Northern part of the ifland, and full of rifing grounds, enjoys an healthy air, and promifes long life to the interior fettlers, who increafe very faft. The floweft progrefs feems to be made in the Eaftern and Southern divifions, which are overfpread with ranges of mountain, requiring nothing but good roads to promote their fettlement. On this fubject I may be thought, perhaps, to have expatiated fufficiently. I thall only further obferve, that, nature having in this and other parts of the ifland walled-in many of the richeft fpots in the world, it remains for the legiflature to make them acceffible, by opening a paffage for thofe induftrious fubjects who are willing to labour the foil, if they were but as able to get at it; and in no part of the ifland will fuch affiftance turn more beneficially to the public account than in this parith.

In the town is a cuftom-houfe, under the direction of a collector and comptroller, deputy naval-officer, receiver-general, and fecretary. The rector's ftipend is 200 l. per annum; but, confidering the extent and populoufnefs of the parifh, his income cannot be eftimated at lefs than \(700 \%\) A printing-prefs has lately been fet up here, furnifhed with a very beautiful type, and gives birth to a weekly paper of intelligence. There feems a ftruggle between this town and Savannah la Mar for the afcendency, fomewhat fimilar to what has happened between Spanifh Town and Kingfton; but the oftenfible object of difpute is different. Savannah la Mar having declined in proportion as Montego Town has increafed, the latter, being far more populous, and more thriving in its trade, became defirous of having the affize-court alternately held. This perhaps was confidered, by the partizans of the elder fifter, as a firf ftep towards removing the feat of juftice, and transferring it wholly to Montego Bay. It was oppofed with great warmth; and
the rights of feniority prevailed. But it is probable, that as the bufinefs of the court mult be in proportion to the number and opulence of the inhabitants, fo this claim of feniority will yield in the end to the conveniency of the people of Montego and Trelawny; as teaft fo far as to eftablifh an alternate court, as firft propofed: by which means, the eafe of trade may be confulted in the leaft partial manner, and the new eftablifhment be reafonably favoured, without ruining the older one.
It is a juft remark of Dr. Browne, that thofe towns, which, fince the decay of the Spanifh trade, have been fupported chiefly by ftanding courts and the calamities of the people, are rather a prejudice than an emolument to the community; while they harbour fo many dependents in idlenefs at the expence of the induftrious, who might have proved very ferviceable members, had they been diffributed about the ifland, and their thoughts turned more upon the advancement than the diftreffing of fettlements.

\section*{S E CT. V.}

\section*{TRELAWNY.}

PROCEEDING from St. James to Trelawny, the road lies, for the moft part, along the coift, without having any object more pleafing to the eye than, on one fide, a profpect of the fea, and on the other a chain of fhaggy mountains, which run along the North fide of the inland in ons almoft uninterrupted range, except where they are indented by creeks and bays, and cleft as it were by rivers. In fome other parts are alfo recefies, affording room for plantations and pafture-grounds; but, in general, their foil is good; and fuch of them as are cultivated, produce here, as on the South fide, great plenty of corn, plantains, coffee, pimento, yams, caflada, and moft other forts of Weft-India provifions, as well as many kinds of European vegetables. But although, towards the Eaft, the hills feem retired further from the fea than in the Weftern parts of St. James, there are few diftritts of Jamaica of a more wild and barbarous afpect than the tract which lies to the Eaftward of LongBay, till the cultivated parts of Trelawny open to view. This newly-baptized parihh is divided from St. James on the Weft by a

\section*{BOOK II. CHAP. IX.}

North and South line, interfecting New Canaan eftate; from St. Anne on the Eaft, by the Rio Bueno; on the North it is bounded by the Sea; and Southerly by St. Elizabeth. Its capital river is the Marthabrae, which takes its fource among the mountains, about twelve miles diftance from the coaft, as commonly fuppofed; for, there being no fettlement near the fpring-head, it is not exactly known. It ferpentines through a courfe of about thirty miles before it reaches the harbour; from whence it is navigable by canoes and boats, for fome miles, to the bridge. The depth of its water is fufficient for much larger veffels, except at the mouth, where a lar, occafioned by the fand difgorged from the ftream, and repelled by the tide, obftruets the navigation. The village of Marthabrae ffands about two miles above the mouth, on a rifing ground not far from the bridge, and confifts of about thirty houfes or more; as the late partition of St. James has of confequence tended to the eftablifhment of a new town here, which may grow in fize in proportion as the lands, at prefent unfettled in the parifh, are brought into culture. The river which glides by it abounds with fifh of various kinds; and the courfe fo delightfully twining, that its banks might be laid out in gardens, with a view to pleafure, as well as utility, which is an additional circumftance in favour of the town's increafe. The harbour is defended by a fmall fort, placed on Point Mangrove, which projects into the fea on the Wert fide. The only fault in its ftructure feems to be the narrownefs of the gorges of the baftions, and of the baftions themfelves; in which the guns cannot traverfe fo freely as they ought. The fpot whereon it fands, and all around it, being altogether fiwampy, there is reafon to fufpect that without draining thefe quarters will not be very healthy. In other refpects this fortrefs is well fituated for guarding the entrance, or channel, which runs at right angles to it about North-Eaft; narrow, and hemmed in by reefs and thoals on either fide, for near a mile. The barracks, for the ascommodation of one hundred men and officers, are at a fmall diftance.
The harbour is covered, towards the Eaft and North-Eaft, by a femicircular fweep of the main land on that fide, and by a fmall ifland; fo that within it is not only capacious, but well theltered. from the fea.

\section*{J A M A I C A.}

The country hereabouts, for a few miles, is well cultivated; but, fome miles further to the Eaftward, it ftill wears a favage afpect, though by no means unfurceptible of great improvements, and valuable plantations. In the Eafternmoft part is a fucceffion of fine pimento walks, which continue, with little interruption, beyond Rio Bueno, the boundary between Trelawny and St. Anne, and through a confiderable extent of the laft-mentioned parifh. The beauty of thefe ficy groves, which are likewvife interiperfed with the orange, limon, ftar-apple, avogato pear, wild cinnamon, and other fayourite trees, among which fome impetuous river rolls its foaming flood, or babbling rivulet, gently trails along in glittering meanders, furnithes a fubject worthy fome darling of the Mufes. Even paradife itfelf, defribed by the pen of Milton, exhibits but a faint reprefentation of them, when he fays,
" Whofe rich trees wept odorous gums and balm.
" Others, whofe fruit, burnifh'd with golden rind,
" Hung amiable-Hefperian fables true.-
"If true, here only; and of delicious tafte.
" Betwixt them lawns or level downs, and flocks
" Grazing the tender herb, were interpos'd;
"Or palmy hillock. Or the flow'ry lap
"Of fome irriguous valley fpread her fore,
"Flow'rs of all hue, and without thorn the rofe.
" Another fide, umbrageous grots and caves
"Of cool recefs. Mean while, the murm'ring waters fall
"Down yon flope hill, difpers'd, or in a lake
"That to the fringed bank, with myrtle crown'd,
"Her cryftal mirror holds, unite their ftreams.
"The birds their choir apply. Airs, vernal airs,
" Breathing the fmell of field and grove, attune
" The trembling leaves. While univerfal Pan,
"Knit with the Graces and the Hours in dance,
" Led on th' eternal fpring."
The parifh extends about fifteen miles in depth, and is fettled, but imperfectly, to the difance of fix miles only from the fea. A fpace remains behind of eighty thoufand acres, and upwards, uninhabited; and concerning which we know nothing more at pre-

> BOOK II. CHAP. IX.
fent, except that it is very mountainous, no public road being traverfed as yet through any part of it; fo that it is almoft as much an undifcovered country, as the regions bordering on the South pole. But fo large a tract contains, probably, valuable timbers, rich veins of foil, and a variety of other fores of wealth and curiofity.

It may be proper, as my fketch of the different parifhes is drawing near to a clofe, that I fhould here recapitulate the feveral parcels of fuppofed cultivated land, which have been noticed to lie in wildernefs, and without an inhabitant.

Acres.
Morafs,
Middlefex, \(\left\{\begin{array}{c}\text { between St. Anne and Cla- } \\ \text { rendon, about }\end{array}\right\}\) 880,000, of which
Surry, \(\quad\left\{\begin{array}{l}\text { St. Thomas in the Eaft, } \\ \text { Portland, } \\ \text { St. George, }\end{array}\right\}^{133,000-} 8000\)
 exclufive of the large vacant tracts in all the other parifhes, which, if the computation I made in treating upon this fubject be near the truth, amount to \(1,753,000\) acres of plantable or cultivable acres more. But, if the amount in all was only one million, I may furely hope to be juftified in the propofitions which I have offered, tending to fhew the expediency of forming roads, and of introducing fettlers, where fo valt a fpace remains unoccupied; as well as in the happy confequences I have deduced as neceffarily attendant upon the execution of a liberal plan of improvement ; whether confidered with refpect to the ffrength, the trade, the opulence, and falubrity, of the iffand, or to the extenfion of the commerce, masuffactures, navigation, and profits, of Great-Britain.

Confiftent with the preceding order, I fhall now give a fate of this parifh for 1768 , proportioned to the other divifion of St. James, from which it was fo lately fevered.
\begin{tabular}{|c|c|c|c|c|c|}
\hline & Negroes. & Catte. & Sugar-p'antations. & Ammal Produce. Hogheads. & Other Settlements. \\
\hline 1768, & 11739 & 8130 & 40. & 7920 & 66 \\
\hline
\end{tabular}

This is not to be deemed the prefent flate, becaufe the fock and produce may well be fuppofed to have been conftantly increafing ever fince the year mentioned. I have therefore only fubmitted this fcheme for the fake of preferving uniformity, agreeably to my firft defign of bringing the progrefs of the feveral parihes down to 1;68; beyond which, 1 have not been able to obtain any very exat calculation.

General State of the County of Cornwall.
County-town, Savanuah la Mar, where the Affizes are held in the months of March, June, September, and December.

Churches, \(2 ;\) Chapels, \(2 ;-\) Synagogue, 0 .
From hence will appear, that this county, though poffeffing fewer Negroes and cattle than Middlefex, is neverthelefs more productive. This may be afcribed to the greater frefhnefs of the land in general; to the greater quantity of feafonable rains, and of cane-land, fituated more conveniently with refpect to thippingplaces. The North fide parihes labour under the inconvenience of late crops, high infurance, a voyage homewards in the moft dangerous feafon of the year, and a high freight to the Kingfton market. All thefe are attended with double charge in war-time. Notwithftanding thefe obftacles, we find that moft of them are in a flourifhing condition. The parifhes of St. George and Portland feem to be the only exceptions. The quantity of fugar produced in both of them together is not equal to the half of what is made in St. Mary's. There are natural difficulties with which the fettlers in them have to fruggle. To thefe are added the others before-recited, to which the reft are liable in common. Perhaps a bounty

\section*{B O OK II. CHAP. IX. 225}
of twenty fhillings per hogthead might be fome encouragement to the feebler fettlers; it would at leaft enable them to carry their fugars to the Kingfton market freight-free; for it is not the leaft of the misfortunes attendant upon their fituation, that they are obliged to pay nearly thrice as much, for the tranfport of a hogthead of fugar to that market, as a Shipper at Old Harbour on the South fide. But the preffure of this tax will appear in a more confpicuous light from the following table of

WATER-CARRIAGE from Kingston to the Out-Ports.

Thefe charges are advanced, by an act of affembly, fifty per cent. in time of war. From hence will appear the utility of eftablifhing Port Antonio as a place of trade; by which means the fettlers in both parifhes would be relieved from this heavy burthen, and put in a condition of meeting their fellow-planters of the richer diftricts upon a more equal footing at the Britifh market.

It remains only for me to fay, that as the perfecting thofe roads already ftruck through the interior part of the country, and opening Vol. II.

G g
others

\section*{J A M A I C A.}
others wherever fuch a communication is wanting, appears to be the firft great leading meafure towards a more compleat fettling and peopling of this ifland; fo I can with pleafure bear teftimony to the laudable firit which at prefent actuates the gentlemen refident there, who, in a late feffion of affembly, beftowed no lefs than 5,000 l., by public grant, towards forming or compleating twenty very neceffary roads in the following parifhes; a munificence which, faithfully applied, will redound not more to the credit of their good fenfe, than to the general benefit of the ifland.

Weftmoreland, from Hamberfly's Penn, to Lenox Plantation.
Ditto, from Glafgow Eftate, to Lucea in Hanover.
Ditto, from Dean's Valley, to Great River in St. James.
Hanover, from Lucea along the mountains, to Mofquito Cove.
St. James, from Great River, through Seven-Rivers, to Montpelier.

Ditto, from Great River, through Montpelier, to the Bogue Eftate.

St. Elizabeth, from Moroe's Craal, to Chefterfield.
St. Anne, from Ocho Rios Bay, to Dun's River.
Ditto, from Dry Harbour, to the Cave in Clarendon.
St. Thomas in the Vale, to St. Mary.
Ditto, to St. Anne.
- Ditto, over Monte Diablo.

St. Mary, from Guy's Hill, through Bagnal's, to Rio Nuevo-Bay.
St. George, from Kingtton, through Cold Spring, to Buff-Bay.
St. David, from the head of Yallah's River, to Roger's Corner, feading to the Barquadier at Yallah's Bay.

Ditto, and Port Royal, from the conflux of the Hope and Hoghole. Rivers, to Yallah's River, near its junction with Green-River.

St. Andrew, from Moore's Eftate, to Wagwater River.
St. Thomas in the Eaft, from Port Morant Harbour, to the Bath.
Portland, from Bath, over Break-heart Hill, to Titchfield.
Ditto, from Titchfield, to Priefman's River, being part of the high road from.Rio Grande.

In fact, the great improvements, made in many parts of the ifland of late years, are principally to be afcribed to the meliorated fate of the roads; to the more general ufe of water-mills; to an im proved

\section*{BOOK II. CHAP. IX.}
proved fkill in every branch of plantation-cconomy ; and (in the Weftern diftrict) to the importation of Negroes immediately into the ports of Savannah la Mar and Montego; as well as to the natural excellence of the cane-land in that diftrict.

On revifing what has been faid in refpect to the fhipping which load at this ifland, and their tonnage, I perceive I fhall be thought to have greatly under-rated them. Errors on this head may very well happen, for want of an average-table, as no two fucceffive years are perhaps equal in the calculation, and as the number and quantity are yearly increafing.

Mr. Leflie, in his account publifhed in the year 1739 , fuppofed the annual produce of fugar equal to feventy thoufand hogheads, of fifteen hundred pounds weight each; which was certainly a miftake. From this pofulatum he endeavoured to fhew, that five hundred fail, weight fifty thoufand tons, and manned by at leaft fix thoufand feamen, were at that time loaded with the produce of the colony; and he deduces the advantages to Great-Britain in the following manner:
Seamen maintained, -_ - 6000 Perfons fubfifted in Britain by the building and outfit of
\[
\text { this fhipping, } \quad-\quad \text { - } 14000
\] Maintained and enriched by the imports into Britain, 20000 Mouths fed by the return of Britifh manufactures, merchan-
dizes, and commodities, - - - 40000
Ditto, by retailing thefe products, computed at - 10000
In all (exclufive of inhabitants in the ifland),
90000
Whoever is well informed of the growth of Jamaica will readily difcern, that this detail, inftead of being conformable to the flate of it at that period, was, in fact, only an anticipation of what has fince happened. But, to fpeak of the prefent time, the produce in fugar is augmented by many thoufand hogfheads; rum and melaffes in proportion. Coffee makes a very capital article of export ; and indigo begins to be confpicuous. Several new ports are opened, whofe trade is in a very promifing way. The progrefs, in fhort, fince the time Mr. Leflie wrote, has been aftonifhingly great; infomuch that I do not know, whether the following computation is not ftill rather too diminutive; viz.

Shipping employed (including Britifh and North-American, and exclufive of coafting veffels), - \(\quad 700\) fail. Tonnage, - - 90000 tons. Seamen,
From which it is eafy to conceive (without minutely recapitulating the fubject) how vafly profitable this iffand is to the mothercountry in every view; whether by employing fuch multitudes of her manufacturers and artificers of all kinds, or of Britifh and American failors, fhip-builders, and all the trades and occupations dependent upon them. Such is the value of this flourifhing colony to Britain! Whence we may rightly conclude, how enormous and irreparable the lofs muft be, fhould it ever devolve into the hands of any other power. In refpect to the quantity of fugar which the ifland may be capable of producing, in addition to what it now yields, it is no eafy matter to fpeak with abfolute precifion, on account of the unequal crops obtained from different foils, and the diverfity of fituation; thofe which are remote from the coaft, or which have bad or indifferent roads for their carriage, or cannot have the conveniences of wind or water-mills, requiring a much greater tract of land for pafturage than others. But, in order to form fome coinjecture on this head, let us firft confider that the unplanted land, lying chiefly within the mountains, and diftant from the fea, muft in general be fubject, more or lefs, to the inconveniences I have enumerated; and therefore the allowance for pafture, or grafs-land, fhould in general be rated accordingly. Let us fuppofe, then, a tract of three hundred acres compleatly fettled, and duly apportioned in canes, provifion, pafture and grafs, wafte, and wood for fire and repairs; and that this eftate, in the fituation before-reprefented, yields, communibus annis, one hundred hogtheads of fugar, and about forty-two puncheons of rum. Admitting then, that here are only five hundred thoufand acres of cane-land unplanted; thefe, according to the eftimate, are capable of producing one hundred and fixty-five thoufand hogheads, and feventy thoufand puncheons; the duties on which amount to 727,5001 . or upwards. The computation may be eafily led on to the fhipping, the feamen, the confumption of manufactures, and other numerous appendages, which necefliarily and invariably follow this augmented flate of cultivation. But all thefe are, by this time, fo obvious to

\section*{BOOK II. CHAP. IX.}
the apprehenfion of every reader, that I need not proceed to elucidate them any further.

Having now gone through the feveral counties and parifhes in a manner which, though difcurfive and imperfect, I hope may be fufficient to give a tolerable idea of their ftate, in regard to fettlements, ports, rivers, productions, advantages, and defects, it may not be improper to exhibit a general review of the whole.

The

\section*{230}

\section*{J A M A I C A.}

The following table may ferve to fhew the comparative fate of the parifhes in regard to their contribution of public taxes, taking the firft-mentioned as the largeft contributor, and fo defcending in a feries of diminution to the loweft, or Port Royal, whofe proportion, compared with the firft, is only as one to eighteen; and hence fome idea may be formed of their comparative wealth:
I St. James(including Trelawny), is St. Thomas in the Vale,

2 Clarendon,
3 Weftmoreland,
4 St. Thomas in the Eaft,
5 Hanover,
6 St. Elizabeth,
7 St. Mary,
8 St. Andrew,
9 St. Catharine,
9 St. Cathar
A comparative table, intended to fhew the traffic carried on by captains of fhips, and other tranfient dealers, at the different outports: and the proportion which they feverally bear to Kingfton; from which fome judgement may be formed of the number of fhipping that refort to each refpectively:

An eftimate of the number of coaches, and other wheel-carriages of pleafure, kept in the feveral parifhes:

St. Dorothy,

The number of thefe carriages is not in exact proportion to the value of property; for it is to be confidered, that, in regard to the richer parifhes, fome of the proprietors refide more commonly in town; fome, on account of bad or hilly roads, keep no carriage in the country; but many more are abfent from the ifland, and keep theirs in Great-Britain. They are by no means to be regarded as articles of luxury in Jamaica: they are neceffary to the inhabitants for their conveniency in point of health, and in traveling from place to place; but, confidering their hafty decay in this climate, and the coflinefs of their workmanfhip, they form no contemptible article in the lift of Britifh manufactures which this ifland contumes; and, as the roads become more and more improved, the number of them will doubtlefs increafe.
The general poft-office for the ifland is kept in the town of Kingfton. This place is in the appointment of the poft-mafter general of Great-Britain, and fuppofed worth about \(1000 \%\). fterling per annum. With refpect to any convenience which the inhabitants at prefent derive from it, much cannot be faid; nor can, indeed, the deputy well afford to make it more ufeful to them, until the roads fhall be further improved, and the country better peopled. The feveral mails are difpatched from Kingfon but once a week; and, if a merchant there fends a letter by this conveyance to his correfpondent at Savannah la Mar, he muft wait twelve days before he can receive an anfwer. The prefent deputy, however, has had the credit of regulating the inland poft upon a better plan than any of his predeceffors.

cates; we may fuppofe the revenue gains a confiderable aunual fum from thefe articles; perhaps, the clear emolument, to fpeak within compafs, is not lefs than \(6000 \%\). fterling, or upwards. The office was firft erected in Jamaica in the year 1687, and one Mr. James Wade appointed poft-mafter. This has been produced as one example, among others, of parliamentary fupremacy in the levying of internal taxes within the colonies; but, as the conveniency arifing from it to trade and commerce was undoubtedly the original ground of its inftitution, fo the fenfe of this conveniency gave it an eafy admiffion into the colonies, ftill indulges its exiftence, and muft continue to do fo, unlefs the rates fhould be increafed to a degree of oppreffion; in this event it muft deftroy itfelf, of which the revenue-officers are probably well fatisfied.

\section*{C H A P. X.}

\section*{State of the Clergy.}

THE Clergy of the eftablifhed church have had a footing in this iffand only fince the Reftoration of Charles II. Cromwell took care to furnifh the army with firitual as well as carnal weapons. 1 think there were no lefs than feven allotted to this fervice; but they were fanatical preachers; a fort of irregulars, who foon made way for more orthodox divines. It has always been a rule, in our Weft-India iflands, to affimilate their religion, as well as laws, to thofe of the mother-country. It is no wonder, therefore, that popery became the favourite fyftem in Jamaica during the reigu of James II. And the character of this religion was perfectly well fupported by the firit of perfecution which was let loofe againt all non-conformifts. The Revolution under king William happily expelled or fubdued thefe fuperftitions, and gave the inhabitants, at one and the fame time, the enjoyment of religious and civil liberty. Recantations became frequent; induftry revived; and the ftubborn rage of bigotry was melted into peace and concord. Charles II, although fecretly profeffing the Roman faith, caunot be accufed of having exercifed feverity againf its adyerfaries. Good fenfe taught him to difcern the expediency of granting.
granting toleration in thefe diftant parts of his dominion; for I do not furpect that he meant fo much to favour men of the Roman \(\mathrm{Ca}-\) tholic perfuafion, as to ftock thefe infant-fettlements with ufeful people. In his inftructions to the governors, he directs, "for the " encouragement of perfons, of different judgements and opinions " in matters of religion, to tranfport themfelves, with their " effects, to Jamaica; and that they may not be obftructed and " hindered under pretence of frruples in confcience," to difpenfe with the taking the oaths of allegiance and fupremacy to thofe that fhould bear any part in the government (the members and officers of the privy council ouly excepted), and to find out fome other way of fecuring their allegiance; and in no cafe to let any man be molefted or difquieted in the exercife of his religion, provided he fhould be content with a quiet, peaceable enjoyment of it; not giving therein any offence or fcandal to the government. But the governors themfelves were ftrictly enjoined, in their own houfe and family, to the profeffion of the Proteftant religion, as preached in England; and to recommend it to others as far as might be confiftent with the peace of the ifland. This toleration was afterwards much narrowed by the acts of parliament affecting papiffs; which are fo far admitted in force here, as to preclude them from exercifing any office, or place of truft, the oaths of abjuration and fupremacy being indifpenfably required to be taken before admiffion into any fuch oifice or place, or a feat in the legiflature. But men of all perfuafions are fill received here as inhabitants; the satura-lization-act, paffed in Jamaica, only obliging aliens to take the oath of allegiance : nor is any man ever queftioned here about his religious principles \([\xi]\). The bifhop of London claims this as a part of his diocefe; but his jurifdiction is renounced, and barred by the laws of the ifland, in every cafe, except fo far as relates or appertains to ecclefiaftical regimen of the clergy; which imports no higher power than that of granting orders, and giving pattoral

\footnotetext{
[ 6 ] In y 72 g , an ait was paffed "for preventing dangers that may arife from difguifed, as well " as deciared, Papilfs." 13ut, this not being found to anfwer the purpofes for which it was intended, and, on the contrary, having only ferved to difcourage well-affected lyoteltants from coming over to fettle in the ifland, it was repealed in the year following. It is fatd to have been leveled againt one particular gentleman, a member of the legillature, and a papint; who had made himfelf offenfive to a party which at that time exinted in the houfe of affembly.
}
\(\mathrm{H}_{1} 2\)
admonitions:
admonitions; for it is queftioned, whether he can fufpend any clergyman here, either abofficio, or a beneficio; fince it is exprefsly enacted, by act of affembly, "that no ecclefiaftical law, or ju" rifdiction, fhall have power to enforce, confirm, or eftablifh, " any penal mulcts, or punifhment, in any cafe whatfoever:" and, as the deprivation either of a living, or its emoluments, is virtually a mulct, and actually a punifhment, the opinion is ftrong againft his right of interpofition. The governor, as fupreme head of the provincial church, and in virtue of the royal inffructions, is vefted with a power of fufpending a clergyman here, of lewd and diforderly life, \(a b\) officio, upon the petition of his parifhioners; and I can remember one example of this fort. The governor inducts into the feveral rectories within the illand and its dependencies; the parties firft producing before him the teftimonials of their being regularly in orders, and taking the ufual oaths. The cuftom of tythes has never been in ufe here: inftead of them, the feveral ftipends are eftablifhed by law, and levied by the juftices and veftries; who are likewife empowered to appoint and limit the fees for chriftening, marriage, churching, and burial. No minifter is to demand or take his ftipend for any longer time than he fhall actually officiate in his parifh, ficknefs only excepted; fo that a fufpenfion \(a b\) officio is, in fact, a fufpenfion alfo a beneficio. They are required to regifter births, chriftenings, marriages, and burials. Thefe entries are declared authentic records, to be received as fuch in any court of juftice; and the ftealing, razing, or embezzling of them is made felony. Every beneficed minifter is, ex officio, a freeholder to all intents and purpofes, and accordingly admitted to vote at elections of affembly-members. He is alfo to be conftantly one of the veftry; and no veftry can make any order, without fift giving timely notice to the minifter, that he may attend if he thinks fit. The ordinance refpecting non-officiating is but vaguely exprefled; however, it has been thought ftrong enough to juftify the churchwardens and veftry in refufing to pay the ftipend, in cafe their rector thould wilfully refufe to perform the duties of his cure. It is fuppofed, that non-refidence is implied, becaufe in the rector's abfence, the pariffioners are left to bury their own dead; and a wilful neglect of the performance of any duty is much the fame, in effect,

\section*{BOOK II. CHAP. IX.}
effect, as a pofitive denial. The ftatute, 21 Henry VIII. excufes from refidence in three cafes; ift, the want of a dwelling-houfe, or the inconvenience of one too fmall, or mean, to receive and accommodate the rector's family: 2dly, ficknefs, or where, by advice of a phyfician, a removal into another air is, bona fide, neceffary for recovery of health; 3 dly , employment in the king's fervice. In Jamaica, the juffices and veftry of each parifh, where there is no parfonage-houfe, are required, either to hire one of \(50 \%\) per annum rent, or to purchafe or build one of \(500 \%\). value. Under this limitation, which is fo unequal, it may be fuppofed that they cannot buy or build a very convenient habitation with fuitable offices. The fum allowed ought to have been \(800 \%\) which would have held a nearer proportion to the fum allowed for hiring; 50 l . being little more than the annual intereft of \(800 \%\). In general, they are well lodged, except in thofe parifhes where the reCtor's immorality, or bad difpofition, has created him fo many enemies, that his flock would rather he flould live any where than among them. The fecond difpenfation, in regard to ill health, and change of air fur recovery, has always been readily indulged here in its full latitude. As to the third, the chaplains attending the governor, or the council, or affembly, are excufed; the former at all times; the two latter, during the feffions. But the fame minifter having ufually been chaplain both to the governor and council, and holding the living of Spanifh Town, where the governor refides, and the council meet, no inconvenience has hitherto refulted. But pluralities are not allowed here; and, if ever they fhould be attempted, the people will be greatly incenfed, having feverely felt the inconveniencies arifing from the combination of many places in one perfon.

The teftimonials required to be produced, before induction into any living here, are, that the candidate be qualified according to the canons of the church of England, by having taken deacon's and prieft's orders ; which teftimonials muft, after the governor's approbation, be recorded in the fecretary's office. They are not to celebrate any marriage without banns have been three times publifhed in the parifh-church to which the parties belong, or without a licence from the governor, under penalty of 100 l . By a rule

\section*{J A M A I C A.}
of the governor's court of ordinary, for better preventing furreptitious marriages of orphans, or minors; affidavits, in fuch cafes, are required to be filed of the guardian's confent; without which, the governor does not ufually grant a licence. Formerly, the cuftom in thefe iflands was, to be married by the juftices of the peace; for in thofe days a clergyman was not always at hand. The fame practice ftill fubfifts, as I am informed, at the Mofquito thore, and fome of the other dependencies. And it is certain, that a marriage, celebrated in this manner in Jamaica, even now, if according to the form of words in our liturgy, would be valid in law, and fupport the right to dower or thirds. The Jamaica law reftrains none from performing the ceremony, except minifters not qualified with the teftimonials before-mentioned; and the penalty, impofed upon others who folemnize without banns or licence, does not tend to declare fuch marriages void. The chaplains of the council and affembly have a falary, of \(100 \%\) each, for reading prayers, every morning during feffion, previous to entering upon bufinefs. They are not called upon, as in England, to preach anniverfary fermons. Of the character of the clergy in this infand I fhall fay but little. There have feldom been wanting fome, who were equally refpectable for their learning, piety, and exemplary good behaviour: others have been deteftable for their addiction to lewdnefs, drinking, gambling, and iniquity; having no controul, but their own fenfe of the dignity of their function, and the cenfures of the governor. The fcandalous or irreproachable demeanour of many will chiefly depend on their own quality of heart, or that of the commander in chief. If the cloth has fuffered difgrace and contempt from the actions of a few; we muft neverthelefs confider the major part, worthy the public efteem and encouragement. Some labourers of the Lord's vineyard have at times been fent, who were much better qualified to be ret ilers of falt-fifh, or boatfivains to privateers, than minifters of the Gofpel. It is recorded of a certain retor of one of the towns, that, having the bodies of three deceafed feamen brought to him one day for interment, he thought to make quick work of it by only one reading of the burial-fervice. The brother tars, who attended the folemuity, infifted upon three feveral readings, i.e honour of their comrades. The rector was obftinate. Words

\section*{B OOK II. CHAP. X.}
grew high; and at length the difpute came to blows. The parfon, the clerk, and all the congregation, engaged pell-mell. Nor long the battle raged; for divinity proved victorious, after hurling two or three of the combatants headlong into the very grave that had been prepared for their inanimate friends. Of another (a Frenchman) it is faid, that, preaching one day, in his ufual broken Englifh, on the fubject of the laft day, he entertained his audience with the comparative condition of the good and the finful; informing them, " dat dey would be feparate, de goat on de left hond, de moutons " on de right." Ridiculous characters of this ftamp fhould brivg no flander on the clergy in general; they reflect difhonour alone upon thofe patrons in England, who would make no fcruple in fending over their footmen, to benefit by any employment in the colonies, ecclefiaftical or civil.

If the bifhop of London coutd legally exercife the right (whicly fome fay he claims) of infecting the conduct of the clergy here, and fubjeating the fame, when neceffary, to ecclefiaftical cenfures and punifhment ; yet his lordfhip's refidence at fo great a diftance, and the engagements of his diocefe at home, would be obftacles to his working a thorough reformation in Jamaica. His cenfures, indeed, though but fparingly inflicted, might neverthelefs produce a good effect, provided all the clergy of the ifland had been regularly trained at one of our Englifh univerfities, and early verfed in the knowledge of our religion. But, when perfons are fent hither barely qualified according to the canons of the church, and the laws of the land, as to ordination, licence, \&cc. and thereby entitled to the very fame privileges and favour, whether they have been bred at Cambridge, at Oxford, or St. Omer's, in an univerfity, or a cobler's fhop; whether they have been initiated in the proteftant, or in the popim religion; whether their language is Englifh or French, or neither: I fay, fo long as the caffock is fuffered to be put on here with fo little diferimination, not all the exhortations of all the bifhops in the world could pofiibly make the clergy of this ifland a refpectable body of men. Let us, however, venture to affert in their favour, that, although fome perhaps may be found, who, in their moral conduct, would difgrace even the meaneft of mankisd, there are others, and in a much greater mumber, who, by their ex-
ample and their doetrine, would do honour to their profeffion in any part of England.

\section*{C H A P. XI.}

\section*{M I NES.}

THE firf adventurers who reforted to this ifland conceived They were told of expectations of finding gold and filver mines. wiards, fomewhere in the Healthfhire Hills, in St. Catharine ; but they were not able to difcover it. Still the flattering profpect ellcouraged two or three principal gentlemen of the ifland to folicit for an exclufive patent for working fuch mines. This they obtained, and made fome attempts; which failed of fuccefs, and brought fuch heavy expences upon them, that they were glad to relinquifh the project, and furrendered their patent. After all, the report of the Spanifh filver mine was probably no other than a fiction. However, that the mountains contain both that metal and gold is very certain, as well as that the Spaniards obtained fome of the latter from the river-courfes; in which method they were inftructed by the Indians, who, in Hifpaniola and this ifland, ufed to procure it in the fame manner. The inhabitants of Peru and Mexico purfue the fame method at this day. They dig in the angles of fome fmall brook, where by certain tokens they expect to find the grains, or particles, of gold. In order to carry off the mud, they admit a frefh ftream upon it, and keep turning it up. As foon as they perceive the gold fand, they divert the ftream into another channel, and dig up the foil with hoes or pick-axes, and convey it upon mules to certain bafons, joined together by fmall conduits. Into thefe bafons they let a fmart ftream of water, to loofen the earth, and clear away the groffer parts; the Indians ftanding all the time in the bafons, and throwing out the fones or rubbifh. The gold ftill remains in the fediment, mixed with a black fand, and farcely vifible, till further depurated by more wathings. In fome of thefe collections are gold grains, as large as bird-fhot; in others have been found lumps of it, from two or three ounces to a - \(\ddagger\) pound
pound weight: and this way of procuring gold is juftly thought far more profitable than digging for it in the mines. In Popayan, the procefs is very little different. They ftir and dilute the mafs in the bafons till the moft ponderous parts, as little fones, fand, and gold, remain at the bottom. They then go into the bafon, with wooden buckets, made for the purpofe, in which they take up the fediment ; then moving them circularly and uniformly, at the fame time changing the waters, the lefs ponderous parts are feparated; and at laft the gold remains at the bottom of the buckets, clear from all mixture. It is generally found in grains, as fmall as thofe of fand, and, for that reafon, called oro en polvo; though fometimes pepitas, or feeds, are found amongit it, of different fizes; but generally they are fmall. The water iffuing from the firft bafon is ftopped in another, contrived a little beneath it, where it undergoes the like operation, in order to fecure any minute particles, which, from their extreme tenuity, might be carried off by the current of water, mixed with earth and other fubftances: and, laftly, this water is paffed into a third bafon ; but the favings here are generally inconfiderable. The labourers moft commonly ufed are Negroeflaves; and whillt fome are bufied in wafhing, others bring earth; fo that the wafhers are kept in continual employment. The finenefs of this gold is generally of twenty-two carats; fometimes more, even to twenty-three; fometimes indeed it is under, but very feldom below twenty-one [b].

There is no doubt but, by a long courfe of practice, the Spaniards have made feveral improvements upon the original Indian procefs, which was more fimple and tedious. The Rio Minho, in Clarendon parifh, has by fome been fuppofed to derive its name from the Minho in Portugal. Others imagine it was fo called from fome mine in its neighbourhood, known to the Spanifh inhabitants; and \(\mathbf{I}\) think there is ground for this conjecture; for, a few years ago, one of thefe lavaderos was difcovered on its bank at Longville plantation, in that parifh, which ftill remains tolerably perfect. Here is a terraffed platform, with feveral bafons chiffeled out of rock; the interftices being filled up, here and there, with a very hard cement, or mortar, to render the furfate fmooth. Joined to

\section*{J A M A I C A.}
this platform is a pretty large fragment of a gutter, made for conducting the river-water into the bafons. This feems to be a convincing teftimony, that the bed of this river has afforded the gold fand, wafhed down perhaps from fome of the mountains among which its courfe lies; and a further proof is, that bits of gold have fometimes been found after floods. The late Mr. Alderman Beckford poffeffed a plantation on the oppofite fide of the river. Many years ago, when he was in the inland, the manager for this eftate brought to him one day a fmall piece of very fine gold, which had been picked up in the fand of the river; and, at the fame time, advifed him to fend for a fkillful metallurgift, as he would probably difcover a rich mine within his own land hereabouts. To this propofal Mr. Beckford made no other reply, than " whilft we " have got fo profitable a mine above ground" (pointing to the cane-pieces), "we will not trouble ourfelves about hunting for any 6. under ground." Aad he was certainly to be commended for the prudence of his anfwer; fince, not to mention only the many thour fand of Indians and Negroes deftroyed by the Spaniards in Peru and Mexico in mining, and fo little to the advantage either of individuals or their nation, how many great fortunes have there not been annihilated by undertakings of this fort, which have rarely yielded a profit in the end commenfurate to the heavy expences that attended the conducting of them; and particularly in hot cli: mates, where the fubterraneous vapours are known to be of fo malignant a mature, as to kill, or at leaft difable, very fpeedily the fouteft labourers! I am aware, that the manner of procuring gold by means of lavaderos is not liable to any fuch objection. It is neither an expenfive nor unhealthy bufinefs; and therefore, if the art of difcovering the river fand, in which gold has generally been found, could be revived in Jamaica, by fending for an Indian or Spaniard fufficiently intelligent, there might be no harm in trying fome experiments with the fand of this river, where it has actually been found ; as well as fome others in the illand, where it might reafonably be expected.

The mountains abound with copper ore of various fpecies; the green and livid ore; and the fhining dark ore, or vitrious copper, Thefe two kinds are the richeft as yet difcovered here, and thought

\section*{BOOK II. CHAP. XI.}
equal to fome of thofe that are cfteemed the of firft clafs in Europe ; the matrix in which they are engaged anfwering both to the hammer and fire with equal eafe. Two mines were worked for fome time in the Liguanea Mountains; but neither of them produced any thing correfpondent to the charges that attended them. The undertaking was too important for two private men of no very capital fortunes; and perhaps they required the management of perfons more experienced in the procefs. It ferved only to convince the curious, that fuch metals were to be found here; and this, I apprehend, is all the advantage that accrued, either to the proprietors, or to the publick. Yet one of thefe mines was faid to have produced; nolefs than a ton per week; but perhaps this was only a bubble report, or the harveit was foon at an end. Schemes of this kind are moft fuccefsfully carried on by large companies, or affociations; whofe feveral ftocks united would bear the contingent expence, till the work is brought to anfwer. But there has been fuch a multitude of frauds and knavifh practices committed, from time to time, in mining-adventures, that fuch projects are not at prefent likely to meet with any countenance. It is, however, to be regretted, that the copper and lead mines in this ifland had not been more effectually profecuted; becaufe, upon the computation that every fugar eftate, which produces one hundred hogheads per annum, muft be at a certain expence of 65 l . per annum for copper and lead alone, it will appear, that the ifland expends \(45,000 \mathrm{l}\)., or thereabouts, every year, in thefe articles, which might be faved. The Spaniards certainly were more intelligent, or met with better fuccefs; for the bells, which hung in the Great Church at St . Jago de la Vega when the Englifh took poffeffion, were caft of copper produced in the ifland. Lead ore likewife abounds here, richly impregnated with filver, which renders the folution of it in aqua fortis milky; but it is not found in any regular bodied veins, which, among other reafons, obliged the gentlemen, who had been engaged in the lead-works of Liguanea, to drop the undertaking, after they had been at a great expence in building a very compleat fet of works, and carried on the manufacture for fome time. The ore, when in fermentation with aqua fortis, throws up a confiderable quantity of fulphur; and hence it has been conjectured, that
fome of the fulphureous fprings in the ifland derive their qualities from this fource. The varicties of the lead ore found here are the fubgranulated, linked with filver; the lamellated, fhining ore, in the fame union; the black-gloffy ore, linked with copper, and lefs impregnated with filver; and the blaak, lead ore, largely admixed with copper, and feldom rich; but the matrix is mellow, and eafily fluxed [i]. Stibium has been frequently found in thefe lead mines.
Iron ore has been difcovered in many parts of this ifland; but the very large quantities of black fand, which are thrown on many parts of the South fide coaft, efpecially near the mouths of rivers, having been hurried down by floods, are much more acceffible, and with little pains. This fand is obfervable almoft every where in the roads and gullies after hard rains; fo that the foil of the favanuahs, as well as that of the mountains, is impreguated with it. The inhabitants ufe it in common, like what is called in England the black writing-fand. It is freely attracted by the magnet; but does not anfwer, it is faid [i], with the acid, or fire. However, it mult be referred to future experiment to difcover, whether it be not endued with the fame propertics as the Virginia black fand; particularly as, upon trial of the Virginia fand fome years ago (an account of which is given in Lowthorp's Abridgement of the Philofophical Tranfactions, vol. II.), aqua fortis produced no ebullition, and fluxing obtained no regulus, nor any fubftance that would apply to the magnet, except a thin cruft, that adhered to a piece of charcoal, which dropped into the crucible during the fufion. For which reafons, this fand was imagined to be very flightly engaged with iron ore, and in fuch a manner, as that the metallic particles could not be feparated and fixed by the ufual procefs. But Mr. Horne, fufperting thefe experiments not to be decifive, conceived that the fand was not altogether and fimply iron; but that it was ftrongly united with a very fubborn, fixed, and permanent earth, which could not be feparated from it without fome extraordinary as well as powerful means. The ingenious artift, procceding upon this fluppofition, fpread about eight or nine ounces of the fand, unmixed with any addition, upon an iron plate, over a ffrong fire, and gave it a very powerful torrefaction, or roafting, to try if by that means
he could not relax and loofen the component parts to fuch a degree, as to make the feparation and reduction of the metal more eafy, when he fhould bring it to the furnace. He then mixed it up with a flux of a very peculiar, but gentle nature, which he had before made ufe of for other purpofes with great fuccefs \([k]\), and committed it to the furnace, where he urged it, by a very ftrong fire, for about three hours, and upon taking it out found the event anfwerable to his moft fanguine expectations; for in the bottom of the crucible he found rather more than half of the fand he had put in reduced to a very fine, malleable metal. Being now convinced that the fand was a very rich iron ore, he acquainted fome of his friends with the difcovery; who being largely engaged in trade with the part of the American continent from whence it was brought, he hoped the gentlemen in that part of the world would, in confequence, purfue experiments with it on a more extenfive plan. And he informs us, that Mr. G. Elliot having fince made trial of it, the event proved encouraging much beyond his expectation; infomuch that eighty-three pounds of the fand were found to produce a bar of excellent iron, weighing fifty pounds. Mr. Elliot frmelted this iron, in a common bloomary, in the fame manner as other iron ore is fmelted; excepting this difference, that the iron fand is fo pure, and fo clean wafhed, that there is not a fufficient quantity of cinder, or flagg, to perform the fmelting; and he was therefore obliged to add either the flagg which iffues from other iron ore, or elfe fome bog-mine ore, which abounds with cinder. In this way, he fays, it is capable of being wrought as bog-ore, or bog-mine. There is fo much of this fand in America, that he thinks there is more iron-ore in this form than any other. The fpecimens of iron, fent by Mr. Elliot from America, were tried by Mr. Horne, and found to poffefs all that agreeable toughnefs and ductility for which the Spanifh iron is fo defervedly famous. And he concludes with giving his opinion, that, by this difcovery, we may obtain a more pure and better kind of iron than any we have hitherto been poffeffed of [l].
If the experiments of thefe gentlemen are to be relied upon, the American fand yields more in value than the richeft and beft ore
[ \(k\) ] This preparation he has not communicated.
[2] Horne's Effiys on Iron and Steel.
hitherto

\section*{J A M A I C A.}
hitherto found in Europe; for the latter ufually produces no more than from fixty to eighty pounds out of one hundred weight; and when the facility of collecting the American fand, without the labour of much digging, is taken into account, together with the difpatch and little expence of wahhing and preparing it for fufion, it will furely juftify this clain of fuperiority. It may therefore merit enquiry, whether the Jamaica fand does not contain the very fame principles which there is every reafon to believe it does; in which cafe, it may become an article of profitable export to Great. Britain, after having been too long neglected as of no value.

\section*{C H A P. XII.}

\section*{SCHOOLS.}

THE great importance of education, in forming the manners, enlightening the minds, and promoting the induftry and happinefs of a people, is no where more obvious than in countries where it is not attainable. It at once excites our pity and regret, that Jamaica, an ifland more valuable and extenfive than any other of the Britilh fugar-colonies, fhould at this day remain unprovided with a proper feminary for the young inhabitants to whom it gives birth. This unhappy defect may be looked upon as one of the principal impediments to its effectual fettlement.

I would by no means have it underfood, that I mean to diminifh any emoluments which Great-Britain derives from this colony: I am fenfible, that the education of the Jamaica youth is attended with an yearly gain to the mother-country. What I would fuggeft is, that the eftablifhment of one or more feminaries in Jamaica, upon a certain circumfcribed plan, would infallibly prove a means of augmenting the profits which Britain draws from thence (though not in the very fame, yet in other channels); and, if the is proved to gain more, it matters not in what line.
It has too long been the cuftom for every father here, who has acquired a little property, to fend his children, of whatever complexion, to Britain, for education. They go like a bale of dry goods, configned to fome factor, who places them at the fchool where he himfelf was bred, or any other that his inclination leads

\section*{BOOK II. CHAP. XII.}
him to prefer. The father, in the mean while, fends remittance upon remittance, or directs a liberal allowance, that his fon may learn the art of fquandering from his very infancy; and, not unfrequently, to gratify a little pride of heart, that little matter may appear the redoubted heir to an affluent fortune. But, alas! it fometimes happens, that he fends no remittances: by which unlucky omiffion, his child is thrown upon the hands of the factor, who throws him upon the hands of the pedagogue; and, between both, the poor wretch undergoes as much neglect and ill ufage, as if he was a charity-boy; and, in either cafe, too often comes from the feet of Gamaliel ignorant, vicious, idle, and prodigal; a difgrace to his friends, and a nuifance to his country. If fuffered to remain in England, under the notion of finifhing his manners, we find. him, in the other view, in general rolling on the wheels of money. into every fpecies of town-debauchery; lavifhing in one week what would maintain a poor family for a twelvemonth; the conftant dupe of artifice; the fure gudgeon of every knave and impoftor.

What a difadvantage is it to young men, of naturally ftrong paf-. fions and lively firits, that they have not the watchful attention of a parent, to check their intemperate fallies, to conduct them into the ways of prudence, and habituate them in the practice of felf-denial! How much to be regretted, that the fond father, whilft his fon thus remains unemployed in ufeful purfuits during the moft headftrong career of his life, is wearing himfelf out with inceffant toil and anxiety, to no other effect than feeding the paf. frons of an indolent or profligate fpendthrift! Without a parent, or monitor; at his elbow, to hold him under due awe and fubordi-. nation, and gratified with plentiful fupplies of money; he foon acknowledges no other governor than his own inclination, and takes pleafure for his preceptor. Few will venture to reftrain him, who. either doubt their authority to controul, or who furpect that fuch, an interpafition may either wear the appearance of too fcrupulous a: rigour, or prove detrimental, fome time or other, to their intereft in bufinefs.

The education of the youths remitted from this nand is, in general, fo mifmanaged, that, was it not for their innate good quailities, not one in ten would ever arrive at the age of difcretion, or
return to his native country with any other acquifition than the art of fwearing, drinking, dreffing, gaming, and wenching. It is, I own, a laudable zeal in a parent, who is folicitous to confer on his children the bleffings of liberal education. But it is furely a palpable mittake, that leads him to give their minds a wrong turn ; and really pernicious to their welfare, that they flould be brought up in a manner totally unfuitable to their future fation. He fhould learn to diftinguifh, that to train up his fon to no profeffion is, by no means, the way to make a gentleman of him; 2 dly, that, if he intends him for a profeffion, the fyftem of his education fhould be particularly adapted to it; 3 dly, that to affign him a profeffion, and at the fame time leave it in his own free choice to apply to the fludy of it or not, or to furnifh him with the inftruments of idlenefs and diffipation, when his mind fhould be engaged in the purfuits of ufeful knowledge, is no more than enjoining him to perform a tafk, and bribing him at the fame time to leave it unperformed ; 4thly, that one uniform plan, or fyftem, of fcholatic inftruction cannot be indifcriminately proper for all youths, however various their fortunes, capacities, or the refpective walks of life into which they are afterwards to pafs.
Let me now afk, what are the mighty advantages which Britain, or the colony, has gained by the many hundreds who have received their education in the former? The anfwer may be, they have spent their fortunes in Britain, and learned to renounce their mative place, their parents, and friends. Would it not have been better for both countries, that three-fourths of them had never croffed the Atlantic? Their induftry is, in general, for ever loft to the place where it might have been ufefully exerted; and they wafte their patrimony in a manner that redounds not in the leaft to the national profit, having acquired a tafte for pleafure and extravagance of every kind, far fuperior to the ability of their fortunes. Surely this can be no public acquifition, unlefs it be proved, that the kingdom is more enriched and benefited by a thoughtlefs prodigal, than by a thrifty, iuduftrious citizen. The education they ufually receive in Great-Britain does not qualify them for ufful employment in Jamaica, unlefs they are bred to fome of the learned profeflions; which neverthelefs are not fuitable to all, becaufe thofe profeffions
would foon be overftocked in the illand, if every youth configned from thence was to be trained to phyfick, divinity, or law, and becaufe ex quovis ligno non fit Mercurius. They generally leave Britain at that critical age when the blood beats high. They regret their exile from the gay delights of London, from the connections of early friendfhip, and perhaps the fofter attachments of love. The impreffions of all thefe remain lively and forcible. With this riveted prejudice againt a colony-life, it is not to be wondered at, that they embrace the firf convenient opportunity of returning to their favourite purfuits and focial intimacies. Such is often the over-fond liberality of Weft-India parents, in ordering a too large allowance for their fons in Britain, that thefe youths are not only invited by this means to neglect their ftudies, and commence men of pleafure, but are readily elevated into a deftructive opinion, that they have been fent thither merely to pafs away their time agreeably, and that it is not meant they fhould perplex themfelves with dry and abftrufe literature, as their fortune will enable them to live independent of fcience or bufinefs. Senfible therefore of their exemption from paternal reftraint, they joyoufly adhere to this conclufion, and follow the feductions of levity, caprice, and vicious indulgence, without reflection. Of the many ftudents at law, natives of Jamaica, who after compleating their terms in London have returned to affume the gown, I have not heard of one who ever gained \(5 \%\). a year by his practice. This iffue we muft not afcribe to any defect of parts, but to a youth fpent in foppery, licentioufnefs, and prodigality, under a total renunciation of every other ftudy. Many I have noted, who, arriving there after having (as it is called) finifled their education in England, appeared unpardonably illiterate, and poffeffed of few attainments beyond what I have already enumerated. Some I have obferved, who, being endued with tolerable genius, acquired more real knowledge and gentlemanly accomplifhments, in one twelvemonth after their arrival, than they had gained by fixteen years refidence in London; and this from being led at once into a fcene of public bufinefs, and the company and converfation of intelligent men. Having pointed out fome principal fources of that imperfect education which our young men in general receive, I fhall add a few thoughts in refpect

\section*{J A M A I C A.}
to the other fex. If a feminary in this ifland is expedient for boys, it is ftill more fo for girls. The neceffary branches of their inftruction ufually lie within a fmall compars. They require not the clements of Greek, Latin, or Hebrew; nor the precepts of the univerfity, nor the theory \(\mathrm{c}^{f}\) tho fciences, mechanic arts, or learned profffions. Reading, writing, arithmetic, needlework, dancing, and mufic, will, with the additional helps of their own genius, prepare them for becoming good wives and mothers. There are many parents in this inand, who, haviug a numerous family of children of both fezes, and barely able to afford their fons an cducation in Britain; they cither fend for a governante, to inftruct their daughters, or keep them uninftructed, except by fuch cafual tuition as may be had from itinerant mufic or dancing mafters. The utility of a boarding-fchool for thefe girls, where their number might admit of employing the ableft teachers, where they might be weaned from the Negroe dialect, improved by emulation, and gradually habituated to a modeft and polite behaviour, needs not, I think, any argument to prove it. Young ladies, fo far accomplifhed as, I think, they might be on a well-conducted plan, would infenfibly acquire, on their emerging into public life, the remaining graces and polith which are to be attained in genteel company and converfation. They would, by this means, become objects of love to the deferving youths, whether natives or Europeans, and by the force of their pleafring attractions foon draw them, from a loofe attachment to Blacks and Mulattoes, into the more rational and happy commerce of nuptial union.
Upon enquiry, in the year \(1 ; 64\), into the flate of the feveral foundations in this inand, it appeared that confiderable fums had been given and bequeathed for the purpofe of erecting free-fchools; fome of which remained unapplied; and others had been fo illmanaged, that the public derived but very trivial advantage from them.

Thefe foundations are;
If. Manniag's, in Weftmoreland, founded in 1710.
2d. One in Vere, by charitable donations, 1740.
3d. In Spanifh Town, by devife of Peter Beckford, efq; 1744. \(4^{\text {th }}\). In Kingfton, by devife of John Woollmer, goldfmith, \(173^{6}\).

\section*{BOOK II. CHAP. XII.}

5th. At Halfway-Tree, St. Andrew's, by devife of Sir Nicholas Laws, 1695. He gave two acres and a half of land, with a houfe for a free-fchool; conditioning, that any parifhioner, paying \(5 \%\) per annum, or \(50 \%\) down, towards advancement of the fchool, might fend his child thither for inftruction. This donation, by a law paffed in \(173^{8}\), was eftablifhed, under the controul of governors, to make regulations, appoint teachers, \&c.; but I do not find that it fucceeded.
6th. At Old Woman's Savannah, in Clarendon, by a donation of three acres of land, and fundry fubfcriptions, 1756.

7 th. About 1769 , or 1770 , Martin Rufea, of the parifh of Hanover, devifed his eftate, confifing chiefly of perfonalty, for ereating and eftablifhing a free-fchool in that parifh; but the particular value of this donation, does not yet appear. The affembly, however, have fhewn a defire to promote it, by granting \(500 \%\). towards its eftablifhment.

All thefe foundations, except that at Old Woman's Savannah, were limited to receive boys of the refpective parifh in which they lay; which, together with their bad regulation, has been a principal caufe of their failing. None promifed fo weil to anfwer, on a general plan, as that at Old Woman's Savannah, fituated as it was in a very healthy climate, in the centre of the ifland, and in the midft of feveral fmall fettlements. No lefs than 2000 . was raifed by voluntary fubfeription for carrying on the neceffary buildings. About the year 1758 , it was opened, and conducted fuccefsfully for about feven years. The air was found fo healthy, that, out of eighteen youths, the difciples of the laft preceptor, not one was afflicted with any fever or acute diftemper during their refidence in it. But, at the time when this academy was brought to a tolerable ftate of maturity, it all on a fudden fell into decline under feveral impediments. The firft was the fmall allotment of land, which was not fufficient to enable the mafter to keep corvs or fheep, or rear poultry, for the neceffary fubfiftence of his boarders ; fecondly, the great difficulty (under this circumftance) of getting provifions; thirdly, the total want of fome certain eftablifhed fund, to afford a falary for the head-mafter, and keep the buildings in repair. The affembly, in 1764 , taking into confideration the means by which

\section*{J A M A I C A.}
this feminary might be rendered more effectual, propofed to place it under the public fanction, and appoint governors and truftees by law. They likewife intended, that one hundred acres of land flould be purchafed contiguous to the fchool; and that twenty acres fhould be cleared and fenced; and 500 l . be granted to truftees for this purpofe; and, being of opinion that 5ol. per ammum, though as little as could be allowed for fchooling, board, wafhing, and lodging, was too large a fum for perions of middling fortuncs and numerous families to afford, they propofed that the mafter fhould give board, vaahing, and lodging, for 301. a year, and education for \(20 \%\), of which no more than \(5 \%\). to be paid by the refpective parents, or guardians; and the remaining 15\%. by the public. Such were their good intentions; which, if carried to effect, might have rendered this a very flourihing infitution. But, before any bill could be framed, the houfe became involved in a bot difpute with the governor, which was followed with feveral diffolutions, and ans atter interruption of bumefs for a year and half; after which, fuch a variety of other matters called for prefent attention, that this affair was not refumed. In the mean while, the mafter, for want of the public fupport, of which he began to defpair, found himfelf ander neceffity of quitting it, and of betaking himfelf to fome other employment, that might yield him a better maintenance. In confequence of his refignation, the buildings, on which fo much money had been expended, remained without a tenant: and, in 3767 , the land and buildings were vefted, by act of affembly, in muftecs, with a power to fell the fame, and apply the money to the purchafe of land and erection of a fchool-houfe in fome other part of the parifh. The preamble of the at alledges, that the fituations had been found improper: but this remains to be proved.

If the affembly fhould hereafter be convinced of the very many benefits which this ifland might reap from a well-concerted plan of this nature ; there is no part of it better calculated for a public fchool than this Savannah.

The priacipal points refpecting fituation are;
Int, That it fhould be retired, free from the confamination of thefe vices which infeft towns and places of much public refort. 2dly, That it frould be on a dry, healthy fpot, in an air entirely

\section*{BOOK II. CHAP. XII.}
free from fiwampy and other noxious exhalations; and fupplied with pure and wholefome water, for drinking and culinary ufes.

3 dly, That it fhould be in the near neighbourhood of feveral. minor fettlements, for the convenience of procuring fmall ftock and other neceffary provifions.
\(4^{\text {thly }}\), That the roads leading to it fhould be good and paffable.

Every one of thefe requifites are enjoyed at Old Woman's Savanimah. Nor is it in any of them liable to objection, except that the road leading to Old Harbour is fo long, as to render the carriage of goods from thence in general tedious. Yet this difficulty. would eafily be furmounted, if eftablifhed prices were formed for the carriage of goods, as there are feveral teams which confantly: ufe this road; or a fhorter carriage might be opened to St. Anue's Bay. I propofe, therefore, that a fquare fhould be laid out here, about the fize of the parade in Spanifh Town. On one fide of it fhould ftand the fchool-houfe; oppofite to this, a chapel, for the regular performance of divine fervice. The Eaftern fide of the fquare fhould be occupied with the mafter's dwelling-houfe; and in each of its wings a convenient fuite of apartments, for the accommodation of boarders. Facing this range of building, thould be difpofed fome convenient offices.

One hundred acres of land contiguous fhould be purchafed by the public; and part of it cleared, fenced, and properly laid out. for pafturage and other ufes. To which fhould be added, fix cows. and a fmall flock of fheep. Eight or ten Negroes fhould likewife. be provided, to be under the care of a white overfeer, at 80 or rool per annum wages, to clear the land, repair fences and roads, and do other neceffary work.
The mafter fhould be under the controul of a certain number of truftees, the governor for the time being to be one; a quorum of, whom fhould amually meet at the fchool, to examine the condition and management of it, with full power to rectify abules, difcharge the mafter, and appoint in his room; and to lay a fate of their proceedings before the legiflature at their annual erfion,
For the better protection of the boys, and to guard againft any calamity likely to happen from infurrections among the Negroes,

\section*{254} J A M A I C A. a defenfible barrack fhould be built at a convenient diffance; where a party, either of foldiers or militia, fhould always be kept on duty. This garrifon would anfwer a double purpofe, by giving likewife a protection to this part of the country, which requires it; and would have the further advantage of being one of the healthieft cantonments in the whole ifland.
For the better fupply of this garrifon and the fchool, a Negree market flould be held here once a week, for poultry, hogs, and fuch other provifions as thefe people ufually deal in.

A certain number of white fervants fhould be conftantly kept, in proportion to the number of boarders, that the latter might not, by a too early familiarity and intercourfe with the Negroes, adopt their vices and broken Englifh.
The articles to be taught here fhould be reftricted to reading, writing, arithmetic (including book-keeping), the Spanifh and French languages, furveying, mechanics, together perhaps with fuch inftructions in agriculture and botany as relate to the improvement of the vegetable productions of the ifland. The pupils might likewife be taught mufic, dancing, fencing, and the military manual exercife, to qualify them the better for a courfe of life which requires agility and ftrength of body, and occafionally the wfe of arms. The expences of boarding, warhing, lodging, and tuition, fhould be regulated by law upon juft and equitable terms, fuitable to the general price of neceflaries, and the circumftances of the middling inhabitants. Nor would it be a mif-placed generofity, if the public fhould contribute a certain allowance towards the education of each boy; or at leaft certain falaries to the mafter and his affiftants, which would enable them to carry on the undertaking on terms better fuited to the ability of parents.
Refricting the fcheme of education to there limits, I purpofely exclude all thofe youths, whofe fortunes qualifying them for the learned profeffions, or to cultivate thofe fublimer degrees of erudision proper to their rank, ought to purfue fuch ftudies in Europe, or North-America, becaufe it were vain to expect that they could attain them to a due accomplifhment in this ifland.
I confine the plan to the children of perfons who do not look fo high, and who would be content to fee their fons virtuoufly trained

\section*{BOOK II. CHAP. XII.}
under their own eye, and at a moderate expence, to fuch branches of knowledge, as may qualify them to be induftrious planters, furveyors, book-keepers, mechanics, ufeful members of this community, rather than be hipped off to Britain; from whence it is a great chance, but they might return with a thorough averfion to, or incapacity for, thefe or any other laudable employments. And here let me remark a little on the felfifh and illiberal fentiments of thofe men who, in the exuberance of their contrivances for enriching the mother-country, oppofe every eftablifhment for education in the colonies, decry them as injurious to the interef of Britain, and would fain have the whole generation of infants regularly fhipped home to learn their \(\mathrm{A}, \mathrm{B}, \mathrm{C}\). Thefe politicians are not fathers, of at leaft have their bofoms fo fteeled with avarice, as to have loft all feeling for their fellow-fubjects in thefe remote parts. The gain, made by the paffage of thefe poor infants, is, it is true, in favour of the balance arifing to Great-Britain from her freight. But let this pitiful earning be weighed againft the hazard of their lives, and the extreme agony which fo many tender parents muft fuffer at parting, through a cruel neceflity, from their beloved offspring, which perhaps they never may fee again. Exclufive of humanity, this circumftance muft alfo be contemplated, in the view of focial policy, as a bitter grievance, which to avoid, many perfons have declined contracting marriage, left they fhould thereby be driven into a diftrefs fo fevere; and which has forced others, under the intolerance of fuch a feparation, to leave the colony prematurely, inftead of devoting themfelves, as otherwife they would have done, to the further improvement of their eftates. So that, in confequence of this local defect, the ifland is become far lefs populous and cultivated than we Mould find it, if provifion had been made for retaining both the parents and their children within it.

I fhall now fuppofe a feminary properly founded in the inand, and happily conducted on fuch a plan, as that the middling families might think themfelves under no fuch necefity of fending their children to other countries for a decent education: and becaufe, for better illuftrating the argument, we mift endeavour to fix fome certain number of them to be fo retained in the ifland, let this
number be called two hundred. I fhall be told, that thefe boys, if fent to England, might probably expend there jol. fterling fer head per cmnum, one with another, in cloathing, food, \&cc. to the amount of \(6000 \%\). But, on the other hand, if we fuppofe thefe boys to remain in Jamaica, will it not be found, that Great-Britain would gain full as much by them in fimilar articles? The difference of climate will certainly require double at leaft the quantity of articles for cloathing every year, and of a much more expenfive fabric; their books, and many items of food and accommodation, muft be procured from Britain at an enhanced price: fo that, if any thing near an exact eftimate could be framed, it murf, I think, appear very convincingly, that thefe children would confume a much greater quantity, or value, of Britifh manufactures and products by ftayiug in Jamaica, and confequently conduce more to the national profit in this way, than if they had been tranfported into Britain. But it is to be further confidered, that every one of thefe natives of the ifland will be equal to two unfeafoned Europeans in ability to undergo the fatigues of bufinefs and labosious exercifes here ; be better qualified, by gradual initiation from their infancy, to underfand and execute the ufeful plans of life for which they are defigned; that they will, by habit and nature, prefer this country to every other, and therefore diligently fettle themfelves in it. The ifland, it is evident, would, in the progrefs of one generation only, contain a far greater number of families than it now pofieffes; it would be much more extenfively fettled; and Great-Britain would gain, in courfe, a proportional accels of profir, by their confumption of manufacures, their ingenuit, and improvements. I am warranted in drawing this confequence; fince it is well known, that a family, refiding in Jamaica, confumes more of Britifh manufactures, and gives employment to many more fubjects in Great-Britain, than the fame family would do, was it tranfplanted into that kingdom \([\mathrm{m}]\). So much for the objections
[ \(m\) ] We may apply, upon this occarion, what a modern writer has faid on another. Let us fuppofe a tract of country that yields a rent of \(50,000 \mathrm{l}\). a year ; the whole of which is enjoyed by one great man. In all probability, above 40 of the 50 is fpent in the capital, in a profufion of elegancies; flowing into the pockets of the induftrious, it is true, but the induftrious in what? v hy, the furnihers of luxurious eatables, delicate cookery, and French wines; the exhibitors of

\section*{BOOK II. CHAP. XII.}
which are to be expected from that quarter. Some of more weight may arife in the ifland itfelf, by reafon of the expence attending fuch an eftablifhment; but, in fome degree to obviate this, I would propofe the confolidating of all the foundations and charity-fehools, whofe incomes united would gratly contribute to fupport the new inftitution, although, in their prefent fate, they ate of very litthe other ufe than the befowing fo many annuities upon five or fix perfons under the title of fchoolmafters.
The income of Spanifh Town fehool is about for 190 per ann. and
has rarely extended to more at a time than - 14 boys.
Woolmer's, in Kingfton, - - 300 15
Vere School, - \(\quad 300 \quad 6\)
\(\begin{array}{lll}\text { Manning's (I fuppofe about the fame), } & 300 & 6\end{array}\)
Of the reft I am not informed, but believe they are entirely dropped. fo. \(1090 \quad 41\)
Not therefore to fpeak of the reft, here are four fchools, with as many different mafters; all of whom have regular falaries, although their pupils are, all together, not amounting to one half the number which one mafter in England is able enough to take charge of.

Thefe, and all other unexecuted benefactions of the like kind, being lumped into one fund, the propofed fchool fhould be open to receive as many foundation-boys from each refpective town, or parifh, as they had been ufually known to have at their refpective free-fchool, one year with another; and upon the very fame terms of board, maintenance, and inftruction: by which equitable permiffion, no injury would accrue to thefe parifhes; but, at the fame time, it is prefumed, that the good intentions of the feveral teftators, and other benefactors, would be much better fulfilled.
public fhews and entertainments ; Italian fingers, and French dancers; the indutrious gentry of Newmarket and White's ; in a word, in the encouragement of precifely that fpecies of induitry which is pernicious to the welfare of a kingdom. Thus the income of this tract of land is expended very little to the benefit of the kingdom at large, or the fpot in particular.

Adjoining to this fpot lies another of the fame rent, but belonging to a thoufand freeholders, of 50\%. per ann. each, living in their neat manfions on their rents in the midit of as many, or perhaps more, tenants. What a population is here! and what a confumption of neceffary manufactures, and home-products! What a difference to the public between the ends of fuch induftry! the one is for ever exerted to the moft beneficial purpofes; the other, to the moft pernicious ones.

> VoL. II. L I

Polit. Ess.

\section*{J A M A I C A.}

It is aftonifhing to obferve the gentlemen of this ifland fo lavifh in fome refpects of public money, and fo inattentive at the fame time, to a matter of this interefting concern; for what can be more fo, than to wean the inhabitants from that detrimental habit of emigration, that unhappy idea of confidering this place a mere temporary abode, efpecially as fuch numbers are, from unexpected turns in life, laid under a neceffity of remaining in it, and bringing up a race of children, whom, for want of a feminary, they no fooner begin to take delight in, than they are forced to wifh they could erafe from their remembrance. Thefe very people have not hefitated to difburfe near \(70,000 \mathrm{l}\). in the fpace of nine years upon fortifying the inland, who never thought of voting a feventieth part of that fum towards rendering it much more effentially fecure, and much better protected, by falling on eafy means of making it populous. The condition of the North-Americans would at this time have been deplorable indeed, if they had been equally improvident. But it is a proof of their wifdom and regard for pofterity, that in every one of their townihips, there is provifion made for a fchoolmafter; fo that the loweft of their people are not left deftitute of fome education. For thofe of more liberal fortune, there are colleges founded under able profeffors; where philofophy has already dawned with a luftre that aftonifhes the oldeft focieties of the learned in Europe, and commands their moft refpecfful attention. It is fhocking to think, that, through a defect of this generous fpirit, or a want of fteddinefs and refolution, no fuch meafures have yet been efpoufed in our ifland. But our hearts muft bleed, when we reflect on the many unfortunate children who have perifhed; fome by fhipwreek; fome by explofion \([n]\); others by neglect after their arrival in England. To enumerate thefe fatalities, would be a melancholy recital, and perhaps only ferve to revive paternal affliction. What bleffings then will await that affembly, who fhall patriotically refolve to prevent this barbarous neceffity, and thefe forrowful events, in future! They will, indeed, be jufly ftyled the fathers of their country, and merit immortal honour.
[ \(n\) ] Several were deftroyed in this manner on hip-board, a few jears fince.

\section*{BOOK II. CHAP. XII.}

I have, chiefly confined my thoughts to a fchool for boys. If nother for girls fhould likewife be approved, perhaps a fituation nearer one of the towns, as at Halfway-tree, in St. Andrews, might be moft proper, in order to accommodate them eafier with the neceflary mafters. This fchool would be beft regulated under a felect committee of the principal ladies in the ifland, the governor's lady being the patronefs. Thefe fuperintendants might annually be chofen by ballot; and the legiflature no further interfere, than in fupporting the foundation, and regulating the terms. of admiffion.

The expence annually attending the boys feminary cannot be exactly computed; neverthelefs, as a calculation may not only convey fome idea of what it will require, but ferve as a groundwork for concerting a regular plan of fuch an undertaking, I take the liberty to offer the following:

A ditto, of fencing and the manual exercife, \(\quad 70\)
A dancing-mafter, _ _ _ \(\quad — \quad\)
An overfeer, \(\quad \begin{aligned} & 70 \\ & 80\end{aligned}\)
An overfeer,
Two white fervants, at \(35 \%\) each, \(\quad 80\)
70
\(\overline{1060}\)
Neceffaries for ten Negroes per anm. at 60 s. each, 30
A botanic garden, fituated near the fchool, might be laid out, and focked with thofe plants of the ifland, or of the Southern continent, moft diftinguifhed for their virtues in medicine, or value for commercial purpofes. It is certain, that nature has not only furnifhed this ifland with feveral vegetable productions ufeful in trade and manufactures, but likewife an unlimited variety of medicinal balms, barks, and roots, adapted to the cure of moft diftempers incident to the climate.
\[
\text { L. } 12
\]

The perfon made choice of for mafter fhould not be allowed to follow any other avocation; which might engrofs too much of his time, to the neglect of his pupils; and for this reafon any beneficed clergyman might be unfit, becaufe his parochial duties would probably claim a great part of that attention, the whole of which ought folely to be employed in the affairs of the fchool.
My wifh to render this infand more flourifhing far outfrips my ability to propound the means. In this cafe, the fincerity of an honeft intention muft atone for the imperfections of argument. The rectitude of a meafure is one thing; the means of accomplifhing it, another. Many perfons are able to difcern the former, who fearch for the other with hefitation. But, as the affembly poffefles happily the power of conducting moft ufeful plans to. effect, I cannot but indulge the hope, that it may hold a fubject of this importance not unworthy its moff ferious deliberation.

\section*{S E C T. I.}

THE inhabitants of this ifland may be diftinguifhed under the following claffes: Creoles, or natives; Whites, Blacks, Indians, and their varieties; European and other Whites; and imported or African Blacks.

The intermixture of Whites, Blacks, and Indians, has generated feveral different cafts, which have all their proper denominations, invented by the Spaniards, who make this a kind of fcience among them. Perhaps they will be better underfood by the following table.

Direct lineal Afcent from the Negroe Venter.
White Man, = Negroe Woman.
White Man, \(=\) Mulatta.
White Man, \(=\) Terceron.
White Man, \(=\) Quateron.
White Man, \(=\) Quinteron.
Whise。
Mediate

\section*{BOOK II. CHAP. XIII.}

Mediate or Stationary, neither advancing nor receding. Quateron, = Terceron.

Tent--enel-ayre.
Retrograde.

Negroe. Givero [o].

In the Spanifh colonies, it is accounted moft creditable to mend the breed by afcending or growing whiter; infomuch that a Quateron will hardly keep company with a Mulatto; and a Meftize values himfelf very highly in comparifon with a Sambo. The Giveros lie under the imputation of having the worft inclinations and principles; and, if the caft is known, they are banifhed. Thefe diftinctions, however, do not prevail in Jamaica; for here the Terceron is confounded with the Quateron; and the laws permit all, that are above three degrees removed in lineal defcent from the Negro anceftor, to vote at elections, and enjoy all the privileges and immunities of his majefty's white fubjects of the ifland. The Dutch, I am informed, tranfcend the Spaniards very far in their refinement of thefe complexions. They add drops of pure water to a fingle drop of dufky liquor, until it becomes tolerably pellucid. But this needs the appofition of fuch a multitude of drops, that, to apply the experiment by analogy to the human race, twenty or thirty generations, perhaps, would hardly be fufficient to difcharge the ftain.

The native white men, or Creoles, of Jamaica are in general tall and well-fhaped; and fome of them rather inclined to corpulence. Their cheeks are remarkably high-boned, and the fockets of their eyes deeper than is commonly obferved among the natives of England ; by this conformation, they are guarded from thofe ill effects which an almoft continual ftrong glare of fun-fine might otherwife produce. Their light is keen and penetrating; which renders them excellent markfmen : a light-grey, and black, or deep hazel, are the more common colours of the pupil. The effect of climate is not only remarkable in the ftructure of their eyes, but likewife

\footnotetext{
[ 0 ] Perhaps from Gitiro, a butcher.
}

\section*{J A M A I C A.}
in the extraordinary freedom and fupplenefs of their joints, which enable them to move with eafe, and give them a furprifing agility, as well as gracefulnefs in dancing. Although defcended from Britith anceftors, they are ftamped with thefe charateriftic deriations. Climate, perhaps, has had fome thare in producing the variety of feature which we behold among the different focieties of mankind, fcattered over the globe: fo that, were an Englifhman and woman to remove to China, and there abide, it may be queftioned, whether their defcendants, in the courfe of a few generations, conftantly refiding there, would not acquire fomewhat of the Chinefe caft of countenance and perfon? I do not indeed fuppofe, that, by living in Guiney, they would exchange hair for wool, or a white cuticle for a black: change of complexion muft be referred to fome other caufe. I have fpoken only of thofe Creoles who never have quitted the ifland; for they, who leave it in their infancy, and pafs into Britain for education, where they remain until their growth is pretty well compleated, are not fo remarkably diftinguifhed either in their features or limbs. Confining myfelf to the permanent natives, or Creole men, I have this idea of their qualities; that they are in general fenfible, of quick apprehenfion, brave, good-natured, affable, generous, temperate, and fober; unfufpicious, lovers of freedom, fond of focial enjoyments, tender fathers, humane and indulgent mafters; firm and fincere friends, where they once repofe a confidence ; their tables are covered with plenty of good cheer, and they pique themfelves on regaling their guefts with a profufien of viands; their hofpitality is unlimited; they have lodging and entertainment always at the fervice of tranfient ftrangers and travelers; and receive in the moft friendly manner thofe, with whofe character and circumftances they are often utterly unacquainted \([p]\); they affect gaiety and diverfions, which in general are cards, billiards, backgammon, chefs, horfe-racing, hog-hunting; fhooting, fifhing, dancing, and mufic; the latter in particular they are formed to enjoy with the niceft feelings ; and their ear for melody is, for the moft part, exceedingly correct. This, indeed, has alfo been remarked of the Creole Blacks, who, without being able to read a

\footnotetext{
[ \(p\) ] One obvious proof of this is, that there is fcarcely one tolerable inn throughout the whole illand, except at a great diftance from any fettlement.
}

\section*{BOOK II. CHAP. XIII.}
fingle note, are known to play twenty or thirty tunes, countrydances, minuets, airs, and even fonatas, on the violin; and catch, with an aftonifhing readinefs, whatever they hear played or fung, efpecially if it is lively and ftriking.
There are no people in the world that exceed the gentlemen of this ifland in a noble and difinterefted munificence. Such a difpofition deferves to be commemorated; and I fhall therefore think it incumbent on me to give fome examples of it. After the deceafe of the duke of Portland, it was well known that he died in very indifferent circumftances. From the time of his death, the dutchefs and her family were provided with a regular and fplendid table, fuitable to her rank, at the public charge; and, as fhe could not have the convenience of returning home in a man of war, the affembly caufed a fhip to be equipped for her with every proper accommodation, and added to this mark of refpect a very confiderable prefent in money. They have been often accufed, and very unjufly, of wilfully feeking occafions to quarrel with their governors. On the contrary, they have never failed in liberality and a juft deference to thofe governors who have deferved well by the mildnefs and equity of their adminiftration.

They made an augmentation of \(2500 \%\). per annum to the governor's ufual falary; erected a magnificent houfe for his refidence ; and purchafed lands, for his better convenience, at no lefs expence than 12,000 . Their gratitude to their governors would have been manifefted more frequently, if more occafions had been given for exciting it. Among other inftances of this fenfe they have of good ufage, let me mintion, that, upon the death of the late worthy governor Sir William Trelawny, the affembly paid no trivial compliment to his merit, by giving his remains an honourable interment at the public charge; the expence amounted to \(1000 \%\). fterling. But, what was a more confpicuous indication of their regret for the lofs of fo efteemed a man, there was not a perfon of any confideration, in the county where he died, who did not attend him to the grave, and with looks that befpoke the the fincerity of their affiction. But this natural propenfity to fuch actions of benevolence as do honour to mankind camnot fhew itfelf fo often in a public manner, as in the more filent walks of private life.

\section*{J \(A \mathrm{M} A \mathrm{~A} \mathrm{C} A\).}

An officer died here, leaving his wife and feveral children in very great diftefs. No fooner was their unfortunate condition made known, than relieved by private contributions amounting to a very large fum. Another officer's widow, in femewhat fimilar circumftances, except that the was left unincumbered with a family, met with the like generous fupport. And here I murt not pafs over a fill more ftriking ancclote of this amiable difpofition. I thall relate it faithfully as near as I can recollect. A certain planter, having taken offence at the behaviour of his fon, refolved to difinherit him. He accordingly devifed away the whole of his eftate to a gentleman of diftinction in the country, for whom he entertained a particular efteem; and foon afterwards died. The devilee swas furprized and fhocked when the will was fhewn to him. He fent for the young man; and, upon his arrival, delivered into his hands a deed which he had juft executed, reconveying to him all his paternal eftate, adding to this effect; "Your father meant to " be my friend; it is my duty to be yours. I give you back his " eftate; it is now yours by jurt inheritance: go and enjoy it; and " be affured that you may always depend on my beff fervices and " advice fo long as your future conduct fhall entitle you to claim "them." An admirable example this of refined virtue and principle, untainted with felfifh or mercenary bafenefs. Though fimply no more than the effufion of a mind controuled by juttice, humanity, and moral rectitude; yet, in this age of callous venality, it deferves to be applauded as an act of felf-denial, not very commonly met with in other parts of the wrorld. Without multiplying fuch narratives, I fhall only declare, that I know but very few natives of the ifland, among the clafs of gentlemen, who, in the like cafe, would not have acted in the fame truly noble manner.

Some years ago, feveral new fettlers, who had arrived in confequence of different acts paffed for their encouragement, were bound, by an exprefs condition, that, after the expiration of the firft feven years, they fhould be obliged to re-imburfe the treafury for the expence of their paffage, and a twelvemonth's fubfiftence adwanced upon their firft coming over. In 1749, there were fifty of them found indebted to the public, on this account, no lefs

\section*{BOOK II. CHAP. XIII.}
than 7479 l. This fum the affembly readily remitted, and difcharged them entirely from the obligation [ \(q\) ].

This will be fuppofed an act of political generofity, and of a different nature from the examples before given; for which reafon I have placed it laft in my catalogue, as it is confidered perhaps more referable to the firit of patriotifm, than the impulfes of humanity ; though to have acted otherwife would have betrayed, I confefs, but a fmall fhare of either.

With all thefe praife-worthy qualities, the Creoles have fome foibles in their difpofition. They are fubject to frailties in common with the reft of mankind. They are poffeffed with a degree of fupinenefs and indolence in their affairs, which renders them bad neconomifts, and too frequently hurts their fortune and family. With a ftrong natural propenfity to the other fex, they are not always the moft chafte and faithful of hufbands. They are liable to fudden tranfports of anger; but thefe fits, like hurricanes, though violent while they laft, are foon over and fubfide into a calm : yet they are not apt to forget or forgive fubftantial injuries. A lively imagination brings every circumftance prefent to their remembrance, and agitates them almoft as much as if it had occurred but immediately before. They are fickle and defultory in their purfuits; though unfhaken in their friendfhips. From this caufe perhaps it is, that various fchemes, both in pleafure and bufinefs, have been eagerly ftarted, and then fuddenly dropped, and forgotten as if they had never exifted. They have fome tincture of vanity, and occafionally of haughtinefs; though much lefs of the latter than formerly. That diftant carriage, which was gained here infenfibly by habit, when the planters employed fix times the number of white fervants, whom, together with their Negroes, they might think it prudent to keep under a due awe and fubordination to authority, has worn away in courfe of time with the caufes of it. They are too much addicted to expenfive living, coftly entertainments, drefs, and equipage. Were they but more abftemious in thefe refpects, and more attentive to good hufbandry on their plantations, there

\footnotetext{
[q] In 1758, was a fimilar act of remiffion of \(6_{301} \mathrm{l}\). 6 s .8 d . to fixty fettlers. I have not the leaft doubt, for my own part, but that thefe remifions were the pure effects of compaffionate fentiments, and not the offspring of a political liberality.
}

Vol. II.
M m
are few who would not amafs confiderable fortunes, and render their pofterity opulent. But they are fond alfo of monopolizing large tracts of land, buying up all around them, and attempting to fettle new eftates before the old one is cleared of debts. By this means, and impofing on themfelves by a fecious mode of payment, in giving their own bonds, and taking upon them the debts of other men, they become harraffed and unhappy ever after. Finding themfelves unable to depofite when the day of payment arrives, they are either reduced to be flaves for life, in hopes to redeem, or fuftain, the whole of a large territory thus acquired; or to plunge deeper and deeper in debt and diftrefs, by fubmitting to every fpecies of fraud and extortion that may gain them a little refpite; till perhaps, after a tedious conflict, they leave at their deceafe their whole fortune to be torn piece-meal, and their family turned adrift, to make room for fome worthlefs upftart, who has poffeffed cunning and villainy enough to accumulate money, or obtain credit, fufficient for becoming the proprietor. It is a fettled maxim, " that "you are not diftinguifhed, or of any note, unlefs you are in debt." In other words, you are no body, unlefs you make yourfelf literally fo. But what fort of a levee is to attend fuch pre-eminence? A banditti of creditors and deputy marfhals, who, for their own fakes, not the planter's, wifh him well for a while, that they may be the better; as a flight of vultures would rather make their repaft on a fat carcafe, than a lean one; and will pick either the one or the other to the very bones before they quit it.

Moft of the old Creole families are allied, by the inter-marriages among their anceftors before the ifland was populoufly fettled. The fame remark may be made on many other communities in the world, which have fprung from a few families; for example, the Wellh and Scotch. The natives in general prefer pure water to any other beverage. Punch feems almoft profcribed from the politer tables; though, when it is made with rum of due age, ripe fruit, and not too ftrong, it is a very pleafant, refrefhing, and wholefome drink, and one of the beft appropriated to a hot climate. Madeira wine is in more efteem than claret, not only becaufe it is cheaper, but as the greateft heat of the air only ferves to improve its flavour, and as it is not apt to ferment in the ftomach. It is generally

\section*{BOOK II. GHAP. XIII.}
nerally drank here diluted with water; and in this ftate it may be regarded as a very powerful antifeptic. They are exceffively fond of chocolate, which fome drink morning and afternoon in preference to tea. Formerly the men ufed to indulge in a fiefo in their hammocks every day after dinner. They dreffed in waiftcoats and caps; never wearing coats nor wigs, except at church, or on public occafions. Thefe modes, copied from the Spaniards, have long been difufed; and at prefent they follow the Englifh fafhions, only ftudying coolnefs and eafe. They indulge in the fruits of the country, particularly rich as are moft nutritious; and fwallow pepper without moderation, which is alfo the principal ingredient in their olios or pepper-pots, a compofition highly efteemed here even by the Europeans.

The planters of this ifland have been very unjufly ftigmatized with an accufation of treating their Negroes with barbarity. Some alledge, that thefe flave-holders (as they are pleafed to call them, in contempt) are lawlefs bafhaws, Weft-India tyrants, inhuman oppreffors, bloody inquifitors, and a long, \&c. of fuch pretty names. The planter, in reply to thefe bitter invectives, will think it fufficient to urge, in the firft place, that be did not make them flaves, but fucceeded to the inheritance of their fervices in the fame manner as an Englifh 'fquire fucceeds to the eftate of his anceftors; and that, as to his Africans, he buys their fervices from thofe who have all along pretended a very good right to fell; that it cannot be for his intereft to treat his Negroes in the manner reprefented; but that it is fo to ufe them well, and preferve their vigour and exifence as long as he is able. The antagonifts, though willing to allow that he is felf-interefted in all he does, can hardly admit this plea; although it is evident, that the more mercenary a planter's difpofition is, the ftronger muft the obligation grow upon him to treat his labourers well, fince his own profit, which he is fuppofed alone to confult, muft neceffarily prompt him to it. In proving him therefore to be fuch a mercenary wretch, they effecually confute the charge of cruel ufage; fince the one is utterly incompatible with the other \([r]\). "But," fays Mr. Sharpe, brandifhing his twoedged

\footnotetext{
[ \(r\) ] Efqueneling, who was himfelf an indented fervant to the French Weft-India company about the year 1564 , bas defcribed very feelingly the difference between the condition of a NeMm2
groe-
}

\section*{J A M A I C A.}
edged weapon, " the planter makes no fcruple to gain by wearing "out his flaves with continual labour, and a fcanty allowance,
". before they have lived out half their natural days;" and he compares this excefs of conftrained labour to "the mercilefs ufage practifed in England over poft-horfes, fand-afies, \&cc." Soon after this declamation, he tells us, "that the allowance of food is not " given to a flave for his own fake, but merely for the intereft of " his mafter; to enable the flave to continue his daily labour in the " fame manner as the foddering a horfe, or fattening of cattle for " flaughter, becaufe the food is given on no other confideration "than for the profit of the owner." Then he gives us a quotation from the learned and reverend Mr. Godwyn, "that the planter " confiders this allowance of provifion as expedient and fit, in " order to enable his Negroes to undergo their labour, without " which, himfelf cannot get riches and great eftates; but nothing "for the wretch's health and prefervation!" Now, with all fubmiffion to this profound advocate and his co-adjutor, I prefume, groe-flave and that of a white contract-fervant, in his time, and affigned the true caufe of it. Speaking, firt, of his countrymen at Hifpaniola, he fays, "the fervants commonly bind them"felves to their mafters for three years; but their mafters, having no confcience, traffic with " their bodies as with cattle at a fair, felling them to other mafters as they do Negroes. Yet, to "advance this trade, fome perfons go purpofely into France, and likewife to England and other "countries, to pick up young men and boys, whom they inveigle and tranfport; and, having " once got them into the iflands, they work them like horfes; the toil impofed upon them being
" much harder than what they enjoin the Negroes, their flaves; for thefe they endeavour to pre-
"ferve, being their perpetual bond-men; but, for their white fervants, they care not whether "they live or die, feeing they are to ferve them no longer than three years.
"The planters of the Caribbee Inles" (he afferts) "were ftill more cruel to their white fer"vants." And he names a Frenchman, at St. Chriftopher's, "who had killed above a hundred with
"ftripes and blows. In regard to the Englifn" (he fays), "they did the fame with theirs ; and
"that the mildeft cruelty they exercifed towards their fervants was, that, when they had ferved fix " years of their time (the ufual term of their contracts being feven), they ufed them fo ill, as
"forced them to beg their mafters to fell them to others, though it were to begin another fervi-
"tude of feven years; and that he had known many who had thus ferved fifteen or twenty
" years."
The low price at which thefe fervants were furnithed by the French company to the planters, being no more than from \(4 l\). 10s. to \(6 l\). 15 s. fterling per head, was another caufe of their ill ufage; fince the lofs fuftained by their death was confidered, by the purchafer, as very trifling, and eafily to be replaced.

At prefent, it requires no argument to prove, that the enormous price of Negroe-flaves muft procure them an indulgent and careful treatment even from owners of an inhuman difpofition; and with fuch men, however felfifh the motive is, ftill the effect may be no lefs favourable to the

\section*{gave,}

\section*{BOOK II. CHAP. XIII.}
that, if the enabling his Negroes to undergo their labour, by allowing them expedient food, be the true motive, as they affirm it is, for the planter's care of his Negroes; the fame motive muft neceffarily induce him to be equally affiduous for the prefervation of their lives and health. This, indeed, is implied; fince, if they are abandoned to ficknefs, or fuffered to periih for want of his care, he muft of courfe be deprived of the benefit of their labour, which alone (as they rightly obferve) is the foundation of his riches. Thus the planter is affirmed to take care of the life and health of his Negroes, that he may profit by their labour; and yet to let them die through barbarity and neglect ; by which he muft eventually be a lofer of all that benefit. In one paragraph he is made to ftarve and wear them out before they have half finithed their term of life; in the next he is faid to allow them plenty of foad, to fupport them in the continuance of their labour. How they can be hacked and ftarved to death, like port-horfes, or fand-affes, and yet fattened like oxen for Leadenhall-market, at one and the fame time, is fo far beyond the humble limits of a planter's comprehenfion, that it muft be left to be further reconciled and explained by thefe two fagacious writers; and the perplexing xnigma, they are defired to folve, is; by what means it comes to pafs, that the planter gains equally, whether he ftarves and deftroys them, or whether he feeds and takes care of them?

I will affert, in my turn, and I hope without inconfiftency or untruth, that there are no men, ner orders of men, in Great-Britain, poffeffed of more difinterefted charity, philanthropy, and clemency, than the Creole gentlemen of this ifland. I have never known, and rarely heard, of any cruelty either practifed or tolerated by them over their Negroes. If cruelties are practifed, they happen without their knowledge or confent. Some few of their Britifh overfeers have given proofs of a favage difpofition; but inftances are not wanting to fhew, that, upon juft complaint and information of inhuman ufage, the planters have punifhed the actor as far they were able, by turning him out of their employ, and frequently refufing a certificate that might introduce him into any other perfon's. Thefe barbarians are imported from among the li-berty-loving inhabitants of Britain and Ireland. Let the reproach

\section*{270}

\section*{J. A M A \(\quad\) C \(A\).}
then fall on the guilty, and not on the planter. He is to thank his mother-country for difgorging upon him fuch wretches as fometimes undertake the management of Weft-India properties; and, by wanton torture inflicted on the flaves confided to their charge (the refult of their own unprincipled hearts and abominable tempers), bring an unmerited cenfure on the gentlemen proprietors, who are no further culi ble than in too often giving this employment to the outcafts of fociety, becaufe, it may happen, they can get none better.

America has long been made the very common fewer and dungyard to Britain. Is it not therefore rather ungenerous and unmanly, that the planter fhould be vilified, by Britifh men, for the crimes and execrable mifdeeds of Britiih refugees! It is hard upon him to fuffer this two-fold injury, firft by the wafte of his fortune in the hands of a worthlefs fervant, and next by fuch unfair imputations upon his character. There is, I allow, no country exifting without fome inhuman mifcreants to difhonour it. England gives birth to fuch, as well as other ftates; but I would not, from this reafon, argue that every Englifhman is (according to Voltaire) a favage.

The planters do not want to be told, that their Negroes are human creatures. If they believe them to be of human kind, they cannot regard them (which Mr. Sharpe infifts they do) as no better than dogs or horfes. But how many poor wretches, even in England, are treated with far lefs care and humanity than thefe brute animals! I could wifh the planters had not too much reafon on their fide to retort the obloquy, and charge multitudes in that kingdom with neglecting the juft refpect which they owe to their own fecies, when they fuffer many around them to be perfecuted with unrelenting tyranny in various fhapes, and others to perifh in gaols, for want of common neceffaries; whilft no expence is thought too great to beftow on the well-being of their dogs and horfes. But, to have done with thefe odious comparifons, I fhall only add, that a planter fmiles with difdain to hear himfelf calumniated for tyrannical behaviour to his Negroes. He would wifh the defamer might be prefent, to obferve with what freedom and confidence they addrefs him ; not with the abject proftration of real flaves, but as their

\section*{BOOK II. CHAP. XIII.} their common friend and father. His authority over them is like that of an antient patriarch : conciliating affection by the mildnefs of its exertion, and claiming refpect by the juftice and propriety of its decifions and difcipline, it attracts the love of the honeft and good; while it awes the worthlefs into reformation. Amongft three or four hundred Blacks, there muft be fome who are not to be reclaimed from a favage, intractable humour, and acts of violence, without the coercion of punifhment. So, among the whole body of planters, fome may be found of naturally auftere and inhuman tempers. Yet they, who act up to the dignity of man, ought not to be confounded with others, whofe odious depravity of heart has degraded them beneath the rank of human beings. To caft general reflections on any body of men is certainly illiberal ; but much more fo, when applied to thofe, who, if their conduct and characters were fully known to the world, would appear fo little to deferve them.
The French treat the gentlemen of their Weft-India fettlements in a very different manner. "It is with great juftice," fays Boffu, "that we reckon the Creoles noble in France. Their fentiments, " are fo noble and delicate in every ftation of life, that they per-" fectly well merit that appellation."
I fhould implore pardon of the ladies, for not having given them the precedence which is their due: but I difpatched the gentlemen: firft, that I might pay the more attention to the lovelier fex. Feminine beauties and virtues are to be found in every clime, the growth of every foil. The Creole women are perfectly wellfhaped; and many of them remarkably handfome. In general; they have exceedingly good teeth; which fome have imputed to the pains they conftantly take in cleaning them with the chaw. fick [s], which guards them from the fcurvy. They prefer chocolate to tea; and do not drink any liquor fo hot as is cuftomary with women in England. It feems to be a vulgar error, that fugar : caufes the teeth to decay. It is certainly an anti-feptic, and un[s] A fpecies of thamnus. It is of a bitter tatte, and contains a great quantity of fixed air; both of which qualities render it a very proper corrector of any putrid flough that may happen to lodge between the interfices of the tecth, It is cut into mall junks, of three or four inches in length ; one extremity of which, being firft foaked a little while in warm water, is foon formed into a foft brufh by chawing; from whence it derives its popular name.
juftly bears that blame; which, for the moft part, fhould rather be thrown on the neglect of cleanlinefs. The ladies of this ifland eat large quantities of it in fugar-cakes, or what is called pan- \(\int u-\) gar \([t]\), and confectionary. I knew a man here, who was exceffively fond of fugar and its preparations. During the crop-feafon, he not only ufed to eat plentifully of it, but mixed fyrup and water for his common beverage at meals. At the age of about eighty years, he had his teeth ftill compleat, perfeclly white and found. He informed me, that he never was afflicted with the tooth-ach in his life. His head was covered with good black hair, without any vifible intermixture of grey, or the leaft fymptom of baldnefs; and he was ftrong, hale, and lively. He imputed the foundnefs of his teeth, his unchanged hair, and activity, to his never having drunk malt-liquors, wine, or firits of any kind ; his only drink being plain water, the pureft he could get, or mixed with fugar. He would probably have attained to a much greater age, if it had not been for an accident, occafioned by his own temerity.

Kalm, accounting for the bad teeth of the ladies in Pennfylvania and other North-American provinces, oppofes the vulgar notion of bad qualities in fugar upon very probable grounds. He obferves, that women, who ufed no fugar in their tea, had equally bad teeth as the reft ; that the men in general were lefs liable to this misfortune; and that the Indians, living in the fame air and country, were remarkable for good teeth. He afcribes the decay of them to their drinking tea too often, fometimes no lefs than thrice a day, and too hot. Some females may titter at the good Dr. Hales's experiment with a pig's tail, which being dipped into a cup of tea, heated to the degree in which it is ufually drank (viz. thirty degrees above the blood-heat), the fkin was fcalded in a minute, fo as to make the hair come off eafily. But he juftly concludes from hence, that the frequent drinking of fuch hot liquor is hurtful, agreeably to the general affertion of phyficians. And I may add, that the ableft dentifts have concurred in their teftimony, that it is particu-
[t] The fyrup in the tache, or latt clarifier, acheres in a thick cruft to the rim, fomewhat refembling brown fugar-candy. This is taken off, and paffes under the name of pan-fugar. Cakes are alfo made by mixing a little powdered ginger and cinnamon with after pouring it on a plate, it harcens, and is liced into little rquan.
larly deftructive of the enamel of the teeth. No people in the world have finer teeth than the native Blacks of Jamaica; and none devour greater quantities of fugar. Few of the Creole ladies fip their tea till it cools to about milk-warmth, nor oftener than once, or at the utmoft twice, a day. But they, who have been brought up in England, where they were accuftomed to drink it almoft boiling-hot, and to debauch in it too freely, are many of them fo much addicted to, and confirmed in this practice, that they cannot break themfelves of it here without much reluctance. And hence perhaps it happens, that the natives of England, and thofe Creoles who have been educated in England, have not in general fuch good teeth, as others who have never been out of the ifland [u].

A crooked or deformed Creole man or woman, unlefs fuch at the time of their birth, or diftorted by fome mifchance, would here be a rarity to be gazed at.

The method ufed here in rearing children fecures the graceful form of their perfons, and is a certain proof of maternal good fenfe. From the time their infants are a month old, they are allowed no other bed than a hard matrafs, laid upon the floor; and, inftead of a fheet, they repofe on a fmooth theep- \(1 \mathbf{k i n}\), which is occafionally fhifted, for the fake of cleanlinefs. They are clad loofe and light, go without the incumbrance of itockings, are bathed regularly in water every day, and expofed freely to the air; fo that no part of the world can fhew more beautiful children. The girls are not fuffered to wear flays (thofe abominable machines for the deftruction of thape and health); but, as well as the boys, are indulged in fuch a cool and unconfined attire, as admits the free extenfion of their limbs and mufcles.
[u] Some reftrict the bad effects of fugar entirely to what is refined, which is fuppofed to be impregnated with lime, ufed in the procefs; and the corrofive power of this fubftance npon bones is well knowis. But it is fcarcely probable, that even a ftrong folution of lime in water could produce this erofion of the teeth, unlefs they were daily rubbed with it; and even then it is far from being certain. But combine this alkali with an acid (as it is in fugar), and furely its effect mult be greatly altered. We may remark, however, the inconfiftence of writers; fome of whom blame the acid in the fugar; others, the alkali of the lime; thus imputing the effect to two contrary principles. The very finall quantity of lime, that can remain intermixed, is certainly not anfiwerable to the fufpicion ; but, if it even fhould be thought to deferve it, the mufcovado, or unrefined, will ftand clear of it.

Many

\section*{274}

\section*{J A M A I C A.}

Many of the good folks in England have entertained the frange opinion, that the children born in Jamaica of white parents turn fivarthy, through the effect of the climate; nay, fome have not fcrupled to fuppofe, that they are converted into black-a-moors. The truth is, that the children born in England have not, in general, lovelier or more tranfparent fkins, than the offspring of white parents in Jamaica. In the Southern parts of the ifland, they have none of that beautiful vermeille, fo much admired in England; but, though expofed, as lively children neceffarily muft be, very much to the influence of fun-hine, their fkins do not acquire the Englifh tan, but in general grow pale, and of a fainter white. The genuine tan of the fun here, on faces of healthy, grown perfons, who are a good deal in the open air, is a fuffufion of red. The matives of both fexes are very remarkable for this kind of complexion; and it gives them the appearance of fanguine habits, and vigorous health. The brunettes, or thofe of a naturally thick and unperfpiring fkin, frequently become browner, as they advance in years, and feem to be tinged with a bilious fecretion, which circulates with the blood, and lurks in the fmaller veffiels, inftead of paffing off, as it does in other habits, by the outlets of perfpiration.' The many Mulatto, Quateron, and other illegitimate children fent over to England for education, have probably given rife to the opinion before-mentioned; for, as thefe children are often fent to the moft expenfive public fchools, where the hiftory of their birth and parentage is entirely unknown, they pafs under the general name of Wef-Indians ; and the bronze of their complexion is ignorantly afcribed to the fervour of the fun in the torrid zone. But the genuine Englifh breed, untainted with thefe heterogeneous mixtures, is obferved to be equally pure and delicate in Jamaica as the mother country.

The practice of inoculation, according to the modern improvements, has been very fucceiffully ufed here. I thall be forgiven, I am. fure, by the ladies, for a thort digreffion on this fubject, and for introducing the following fenfible remarks upon it:
"Of thofe who take the fmall-pox cafually, one in feven is " found to die. But, of fifteen hundred patients inoculated in "England by the furgeons Ranby, Hawkins, and Middleton, three
" only mifcarried, i.e. one in five hundred. Now, not to men"s tion that the hazard is, by a long experience fince, reduced al" moft to nothing, according to this computation, which has never " been invalidated; in every five hundred perfons inoculated, fe"s venty lives are preferved to fociety! Let the computation be " extended to the probable number inoculated every year, from the " time when the practice began to obtain generally, and to thefe " add the pofterity derived from the marriage of thefe redeemed " perfons, as they advance to maturity; and we fhall find a pofi" tive and happy increafe of people, continually rifing up, and " ftaring out of countenance all declaimers againft the prac" tice \([w]\)."

I thought I might, without impropriety, give this quotation at large, becaufe I have obferved fome tender mothers in the ifland led away by vain terrors, or influenced by predeftinarian feruples; not confidering, that the hand of the Almighty has pointed out this, eafy method of preferving his creatures from the horrid ravages of this difeafe, the feeds of which are probably congenial to our very frame, and from whofe infection very few are exempted; nor perceiving the force of pofitive evidence, which, through a long courfe of experience, has demonftrated, that inoculation is almoft an infallible means of rendering it harmlefs. Nothing can be more mild than the diforder in Jamaica, received in this manner. Infants, of one month old, have gone through it very fafely. The working flaves followed their ufual occupations with the puftules upon their bodies, without inconvenience; and even bathed themfelves in the rivers, without any ill confequence. When a preparation was ufed, they either had no puftules, or at leaft fuch as never came to a fuppuration. Two very moderate dofes of the mercurial medicines, and as many gentle purgatives, with an interval of three or four days between them, were found fufficient. With refpect to children at the breaft, care was only taken to keep their bodies gently lax during the continuance of the eruptive fymptoms; and, after the eruption, to correct any gripings with daily dofes of teftaceous powder, and a few drops of tinct. thebaic. at night. The eruption generally appeared, on thefe young fubjects, about the fixth day ;

\footnotetext{
[rt] Critical Revietr.
}

Nn 2
and,

\section*{J A M A I C A.}
and, in grown perfons, about the eighth or ninth. They were conftantly in a free air in the thade, and fuffered no confinement; being reftrained only, in diet, from animal food, falt, and fpirituous liquors.

Of fifteen hundred Negroes, of all ages and habits of body, who were inoculated here by one practitioner, not one died. Such plain facts fhould weigh more than argument in fuppreffing groundle is apprehenfions; and teach every mother, that the wilful confignment of her helplefs little ones to almoft certain death, when the might exert the probable means of faving them, is abfolute murder in effect, and little fhort of it in guilt. The infant is incapable of judging for itfelf, or of exercifing a freedom of choice. But to the parents God has imparted reafon fufficient to conduct their uninftructed charge, and protect it from impending evils. In ufing their beft endeavours for this purpofe, they manifeft a truly religious obedience to their Maker, a due affection for their offspring, and a fubmiffion to the rules of good fenfe. And, whatever the event may prove, they are confcious of having acted with the beft intentions, which will furely be moft acceptable to that Being, who

> "Preferreth the upright Heart, and pure."

Whilft I render all due praife to the Creole ladies for their many amiable qualities, impartiality forbids me to fupprefs what is highly to their difcredit ; I mean, their difdaining to fuckle their own helplefs offspring! they give them up to a Negroe or Mulatto wet nurfe, without reflecting that her blood may be corrupted, or confidering the influence which the milk may have with refpect to the difpofition, as well as health, of their little ones. This fhameful and favage cuftom they borrowed from England; and, finding it relieve them from a little trouble, it has gained their general fanction. How barbarous the ufage, which, to purchafe a refpite from that endearing employment fo agreeable to the humanity of their fex, fo confonant to the laws of nature, at once fo honourable and delightful to a real parent, thus facrifices the well-being of a child! Notwithftanding every precaution they take to examine the nurfe of their choice, it is a million to one but the harbours in her blood the feeds of many terrible diftempers. There is fcarcely one of thefe
there nurfes who is not a common proftitute, or at leaft who has not commerce with more than one man; or who has not fome latent taint of the venereal diftemper, or forofa, either hereditary, or ac. quired, and ill-cured. The place of a nurfe is anxioufly coveted by all of them, as it is ufually productive of various emoluments to them; and on this account they are fure to keep fecret any ailment they labour under, however detrimental to the child, rather than be turned off. The mothors in England are at leaft able to find fome healthy labourer's wife; and none of them, I venture to believe, would fend their infants to be fuckledin any of the brothels of London. It is true, the Creole ladies have not the fame advantage; they can meet with none other than unchafte nurfes; and this is another unanfwerable argument to prove the neceffity of their adminiftering their own breaft, in preference to one that they are under fo many reafons to furpect is not equally proper.

Numberlefs have been the poor little victims to this pernicious cuftom. Many innocents have thus been murdered; and many more have fucked in difeafes, which rendered their life miferable, or fuddenly cut fhort the thread of it.

A misfortune attending moft of thefe children is, that they are extremely fubject to worm-diforders imbibed with the milk; for I have frequently feen thefe vermin difcharged from babes of three months age. But it is more ufual to fee them looking healthy and well till they reach the third year; when they frequently decline all at once, and from this caufe. They are often too much crammed with the fruits and roots of the country, which at this tender age are apt to generate a large quantity of vifcid nime in their bowels, that affords a nidus for the worms to depofite their eggs. The more common kinds which infert them are the afcarides, and tania or tape worm : both thefe forts are effectually expelled with a decoction of the antbelmentbia, or worm-grafs, which grows naturally in the South parts of Jamaica; and fometimes the oleum ricini, or nut oil, is adminiftered in fmall and frequent dofes with fuccefs.

The down of the cow-itch pods, given in the proportion of one part to three parts of honey or fyrup, to the quantity of one teafpoonful morning and evening, for a week, has been found, by
repeated trials and long experience, to be equally deftruative to them; care being only taken to give a proper dote of rhubarb, or other mild purgative, in order to carry off the dead worms.

An old woman here formerly performed feveral wonderful cures of this knd, with no other remedy than fat pork, with which the fed her little patients; and, no doubt, it acted upon the worms in the like manner as the oily compofitions frequently prefcribed, which are found to deftroy thefe animalcules by flopping up their pores.
Another misfortune is, the conftant intercourfe from their birtly with Negroe domeftics, whofe drawling, diffonant gibberifh they infenfibly adopt, and with it no fmall tincture of their aukward carriage and vulgar manners; all which they do not eafily get rid of, even after an Englifh educatior, unlefof fent away extremely young.
A planter of this ifland, who had feveral daughters, being apprehenfive of thefe confequences, fent to England, and procured a tutorefs for tliem. After her arrival, they were never fuffered to converfe with the Blacks. In thoit, he ufed all his vigilance to preferve their language and manners from this infeation. He fucceeded happily in the defign; and thefe young ladies proved fome of the moft agreeable and well-behaved in the ifland: nor could it be diftinguifhed from their accent, but that they had been brought up at fome gentecl boarding-fchool in England; infomuch that they were frequently afked, by ftrangers, how long they had refided in that kingdom. Until a proper feminary can be eftablifhed, every mafter of a family here might purfue the like method, at leaft with his daughters, who are generally kept more at home than boys. But a mother, who has been trained in the accuftomed mode among a herd of Negroe-domeftics, adopts the fame plan, for the moft part, with her own children, having no idea of the impropriety of it, becaufe fhe does not difcern thofe fingularities, in fpeech or deportment, which are fo apt to frike the ears and eyes of well-educated perfons on a firf introduction to them.
The ladies, however, who live in and about the towns, being often in company with Europeans, and others brought up in GreatBritain, copy imperceptibly their manners and addrefs; and become

\section*{BOOK II. CHAP. XIII.}
better qualified to fill the honourable fation of a wife, and to head their table with grace and propriety. Thofe, who have been bred up entirely in the fequeftered country parts, and had no opportunity of forming themfelves either by example or tuition, are truly to be pitied. We may fee, in fome of thefe places, a very fine young woman aukwardly dangling her arms with the air of a Negree-fervant, lolling almoft the whole day upon beds or fettees, her head muffled up with two or three handkerchiefs, her drefs loofe, and without ftays. At noon, we find her employed in gobbling pepper-pot, feated on the floor, with her fable hand-maids around her. In the afternoon, the takes her fiefo as ufual; while two of thefe damfels refrefh her face with the gentle breathings of the fan; and a-third provokes the drowfy powers of Morpheus by delicious fcratchings on the fole of either foot. When fhe rouzes from flumber, her feech is whining, languid, and childifh. When arrived at maturer years, the confcioufnefs of her ignorance makes her abfoond from the fight or converfation of every rational creature. Her ideas are narrowed to the ordinary fubjects that pafs before her, the bufinefs of the plantation, the tittle-tattle of the parifh; the tricks, fuperftitions, diverfions, and profligate dif, courfes, of black fervants, equally illiterate and unpolifhed.

Who is there, that does not fincerely deplore the lot of this unhappy tramiontane and blame the inattention of the legiflature to that important article, Education! To this defect we mutt attribute all that cruel ridicule and farcafm, fo frequently lavifhed upon thefe unfortunate females by others of their fex, who, having experienced the bleffings of a regular courfe of inftruction at fchool, are too oftentatioufly fond of holding in derifion what they ought to look upon with candour and concern. What ornaments to tociety might not thefe neglected women have proved, if they could have received the lame degree of liberal polifh! On the other hand, deprived thus of the means of culture and refinement, illfurnifhed as they are with capacity for undertaking the province of managing domeftic concerns, uninformed of what peitains to œeconomy, order, and decency; how unfit are they to be the compaw nions of fenfible men, or the patterns of imitation to their daughters! how incapable of regulating their manners, enlightering

\section*{J A M A I C A.}
their underfanding, or improving their morals! Can the wifdom of legiflature be more ufefully applied, than to the attainment of thefe ends; which, by making the women more defirable partners in marriage, would render the ifland more populous, and refidence in it more eligible; which would banifh ignorance from the rifing generation, reftrain numbers from feeking thefe improvements, at the hazard of life, in other countries; and from unnaturally reviling a place which they would love and prefer, if they could enjoy in it that neceffary culture, without which life and property lofe their relifh to thofe who are born, not only to inherit, but to adorn, a fortune.
The women of this ifland are lively, of good natural genius, frank, affable, polite, generous, humane, and charitable; cleanly in their perfons even to excefs; infomuch that they frequently bring on very dangerous complaints by the too free ufe of bathing at improper periods. They are faithful in their attachments; hearty in their friendhips; and fond, to a fault, of their children, except in the fingle inflance which I am grieved to have been obliged to expatiate upon. They are temperate and abftemious in their diet, rarely drinking any other liquor than water. They are remarkably expert at their needle, and indeed every other female occupation taught them; religious in their lives and fentiments; and chafte without prudery in their converfation. In horfemanthip, dancing, and mufic, they are in general very accomplifhed: in thefe acquired qualifications they excell, more or lefs, according to the opportunities that have fallen in their way of cultivating their natural talents, which are very good, and fufceptible of extenfive improvements. As a foil to the brilliant part of their character, I mult acknowledge, although with great reluctance, that they yield too much to the influence of a warm climate in their liftlefs indolence of life. But it is chiefly the fault of the men, if they do not affemble till dinner is ferved up, or retire from it with the cloth, to doze away an hour or two, or enjoy a feparate tete a tete in fome adjoining chamber, leaving the men to their bottle. I have heard it reported of the mafter of a family, that, regularly after dimner and one circulation of the bottle, he ufed to throw out broad hints that it was time for all females in company to with-

\section*{BOOK II. CHAP. XIII.}
draw; and, when this fignal was difregarded, gave fo indecent a toaft, as drove them immediately out of the room ; a practice fo brutal, that it would merit the baftinadoe even among Hottentots. This unfocial cuftom, however, lofes ground, as the men are lefs attached than formerly to the pleafures of getting drunk. In the genteeler families, converfation between the two parties is kept up for a confiderable time after dinner. Tea, coffee, and cards, fupply the pafetemps of jovial fongs and voluptuous bumpers. They now contrive, for the moft part, to have a felect apartment, or drawing room, for rejoining the ladies after a fhort feparation; and the cuftomary intermixture in large companies, of placing the beaus and belles alternately, tends much to promote this polite intercourfe between the two fexes. Formerly the married men and bachelors ufed to carouze together almoft every day at taverns; the fpirit of gaming then prevailed to a great excefs; and the name of a family man was held in the utmoft derifion.

That irregular courfe of life was accompanied with innumerable evils. Many gentlemen of rank in the country impaired their fortunes, and reduced their families to the brink of ruin. It was not at all unufual to fee one of them, after lofing all his money, proceed to ftake his carriage and horfes that were waiting to carry him home; and, after lofing thefe, obliged to return on foot. Drunken quarrels happened continually between intimate friends; which generally ended in duelling. And there were very few who did not fhorten their lives by intemperance, or violence.

The prefent fate of reformation therefore is a very happy change; which, by re-uniting the fexes, has promoted temperance, urbanity, and concord. A want of proper education and good maternal examples has rendered fome women here extravagant in their expences, and very indifferent œconomifts in their houfeold affairs. They employ too numerous a tribe of domeftic fervants, and are apt to truft too far their fidelity, which is not always proof againft ftrong temptations. From twenty to forty fervants is nothing unufual. Perhaps it may not be unpleafant to the reader, to fee a lift of one of thefe houfehold eftablithments. I fhall therefore prefent him with the following:
I Butler,

Voz. II.

2 Footmen, or waiting-men,
I Coach-

1 Coachman,
I Poftillion,
\({ }_{1}\) Helper,
\({ }_{1}\) Cook, 1 Affiftant,

1 Key, or ftore-keeper,
3 Waiting-maid,
3 Houfe-cleaners,
3 Wafher-women, 4 Sempftreffes. Thefe amount all together to twenty. If there are children in the family, each child has its nurfe; and each nurfe, her affiftant boy or girl; who make a large addition to the number. Moft of thefe are on board-wages, from three to four rials per week, befides their cloathing; with which they feem to live very comfortably. A fpeculative writer fuppofes it very feafible, in order to increafe the number of white inhabitants, that every family fhould employ white domeftics inftead of Negroes. But he did not reflect, that even in Britain there is no one clafs of the people more infolent and unmanageable than the houfe-fervants. Their wages are enormous; the charge of maintaining them, their wilful wafte, idenefs, profligacy, ingratitude of difpofition, and ill behaviour in general, are fo univerfally, and (I believe) with good reafon, complained of, that moft families confider them as neceffary evils, and would gladly have nothing to do with fuch plagues, if their rank or ftation in life, or their ownimbecillities, could poffibly admit of their keeping none. What then muft be the cafe in Jamaica, if thefe gentry are found foungovernable and troublefome in Great Britain? None of them would leave home, to ferve in the colony, except for very extravagant wages: even thofe that might pafs over would foon difcover, that, by the policy of the country, there fubfifts a material diftinction between them and the Negroes. If they fhould chance to meet with any black fervants in the fame family, they would impofe every part of the drudgery of fervice upon the fe poor creatures, and commence ladies and gentlemen. The females would attend to no work, except pinning their lady's handkerchief; and the men, to no other than laying the cloth for dinner, and powdering their mafter's hair. The governors ufually bring over white fervants with them; but are very glad to get quit of them, and fall into the modes of the country. The Negroes are certainly much better fervants here, becaufe they are more orderly and obedient, and conceive an attachment to the families they ferve, far
ftronger

\section*{BOOK II. CHAP. KII.}
ftronger than may be expected from the ordinary white domeftics: at leaft, the inhabitants of the illand feem to be of this opinion: for thofe gentlemen, whofe ample fortunes admit their affording the expence of importing and mantaining white fervants, incline univerfally to prefer the Blacks; nor will they, I believe, ever wifh to increafe population, and ftrengthen their fecurity, by the introduction of Englifh valets and friffeurs into their families; the debauched morals, and diffolute practices of this race of men, would do more hurt among the Blacks by the force of example, than their ability for defending the country could do good. The fort of men, beft qualified for increafng the number of Whites, are the fober, frugal, and induftrious artificers; together with the poorer farmers and graziers, a hardy ufeful people, and moft fit for occupying the unfettled defarts, and changing the woods and wilderneffes into flourifhing paftures and plantations.

But to return to what concerns the ladies. Scandal and goffiping are in vogue here as well as in other countries. A natural vivacity and opennefs of temper are apt to betray the unguarded into little indifcretions, which are fometimes diligently aggravated and blackened with the tongue of malevolence and envy. Yet few are more irreproachable in their actions than the Creole women: they err more in trivial follies, and caprices unreftrained, than in the guilt of real vice. And, if we confider how forcibly the warmth of this climate muft co-operate with natural inftinct to rouze the paffions, we ought to regard chaftity here as no mean effort of female fortitude ; or, at leaft, judge not too rigidly of thofe lapfes which happen through the venial frailty and weaknefs of human nature. They have not yet learned thofe artifices and difguifes which women of the world can affume when they pleafe to veil their fentiments and conduet. Their gaiety inclines them to be fond of drefs, balls, and company ; and, confidering the fmall circle of public diverfions in this illand, it is not furprifing that they thould feek to gratify their inclinations by every lively amufement of this fort that prefents itfelf. I mutt add, that they poffefs fome fhare of vanity and pride ; and that fome few join to the latter an high and over-bearing fpirit, which, not having been duly checked in their infancy, is apt to vent itfelf in turbulent fits of rage and
clamour, to the unfpeakable difturbance of the poor animal, whofe misfortune it may be to be linked in the nuptial bonds with fuch a temper. Fain would I wifh to relate, that the more gentle and efteemable fair-ones apply themfelves to repair the deficiencies of an imperfect education, by giving fome leifure hours to the moft approved authors, by whofe help they might add the delights of a rational converfation to thofe abundant graces which nature has beftowed upon them. It is a pity that fuch excellent talents fhould lie wafte, or mifemployed, which require only cultivation to make them fline out with dignity and elegance. To pleafe the eye, requires only the filll of a commou mercenary liarlot ; but to captivate the heart, and charm the mind, a womat muft diveft herfelf, as foon as poffible, of grofs ignorance (that fofter-mother of pride), filly prattle, and conceited airs; the muft endeavour, by diligent reading and obfervation, to enlarge her notions, banifl her prejudices, and fock her intellect with fuch improvements, as may enable her to bear her part in a fenfible converfation. By thefe eafy means, fhe may fave many a blufh, when common fubjects are difcuffed, of which fhe ought not to be ignorant; fhe will entertain her company in a rational manner, and with correct language, and not expofe her hufband to be hooted at, for his folly in tying himfelf for life to a pretty idiot. That audacious flanderer, Dr. Brorme, accures fome of the ladies here of flaying their faces with the cauftic oil of the cahherv-nut, in order to acquire a new fkin. "The procefs" (he fays) "continues fourteen or fifteen days; du" ring which they fuffer the moft exquifite torture, which their " vanity enables them to fupport with Chriftian patience." And yet it feems to be to very little purpofe ; "for" (he adds) "all " this bliftering leaves the countenance much more deformed, than " any fpots or freckles could have made it. Happy," (quoth he)
" had they been equally attentive to the improvement of their " mind, which they too frequently neglect; while thcy bear fo " much pain, to caft their fkins, in imitation of fuakes and " adders."

The doctor, like many other old batchelors, had frange fancies about the operations of the toilet, or (to believe the beft of him) took a hint, from fome girlifh freak of this kind, which might

\section*{BOOK II. CHAP. XIII.}
have come to his knowledge in the courfe of his medical practice, to infinuate that this cofmetic was in general ufe. But the women here fo univerfally underftand the cauttic nature of this oil, that they never attempt to open the nuts with their own fingers, for fear of burning them. All families have the kernels ferved up at their table in a variety of different preparations. And hence I judge it impoffible, that any woman, poffeffing two grains of fenfe, could think of befmearing her whole face with fuch a liniment, which erodes like aqua fortis, though the might ufe the kernels in emulfion. I rather fufpect the doctor's credulity was impofed upon by fome wag; and that he feized this occafion to have a fling at the ladies, who are therefore much obliged to him for fo ingenious a tale, as well as for the fling at the end of it.

It is remarked here, that the women attain earlier to maturity, and fooner decline, than in the Northern climates: they often marry very young, and are mothers at twelve years of age. They confole themfelves, however, that they can cnjoy more of real exiftence here in one hour, than the fair inhabitants of the frozen, foggy regions do in two. The temperance of their life carries them on, notwithfanding, to a good old age; it being no uncommon thing to fee women here of eighty or ninety years, and upwards. A few years fince, a venerable matron died at the age of one hundred and eight; and I remember one of ninety-fix, who enjoyed all her faculties unimpaired, excepting her fight, which truly was fomewhat the worfe for wear. Many of the other fes too, who, by conflitution or from prudence, avoid ftrong liquors and hurtful excefles, arrive at the fame periods of longevity with fower infirmities than accompany the fame ages in England, where old folks are generally fhriveled with cold, and overwhelmed with catarrhous defluxions, the natural fruits of a raw, wet atmofphere. In Jamaica, the warmth and equable ftate of the air is friendly to age ; and the nutritious quality of its foods preferves vigour and \(x\) lively flow of fpirits.

Intemperance and fenfuality are the fatal inftruments which, in this ifland, have committed fuch havoc, and fent their heedleis votaries, in the prime of manhood, to an untimely grave. It is owing to thefe deftructive caufes, that we perceive here fuch a
number of young widows, who are greedily fuapped up by difreffed bachelors, or rapacious widowers, as foon as the weeds are laid afide. Sir Nicholas Laves, formerly governor of the ifland, ufed to fay, that the female art of growing rich here in a fhort time was comprized in two fignificant words, "marry and bury."

To fum up the character of the Jamaica ladies, I fhall conclude with this remark; that, confidering the very great defeets in their education, and other local difadvantages, their virtues and merits feem juftly entitled to our higheft encomium; and their frailties and failings to our mildeft cenfure.

\section*{S E C T. II.}

THE natives of Scotland and Ireland feem to thrive here much better than the European Englifh. They bring founder conftiturions with them in general, and are much fooner provided for. The national partiality, which is made an accufation againft the gentlemen of the two former parts of the Britifh empire, is fo far attended here with very good confequences; for their young countrymen, who come over to feek their fortunes, are often beholden to the benevolence of thefe patrons, who do not fuffer them to languifh and fall into defpondence for want of employment, but take them under friendly protection; and, if they are well difpofed, they are foon put into a way of doing fomething for themfelves. The gentlemen are therefore, in my opinion, very often unjuftly cenfured for doing what humanity requires. This hofpitable alacrity to affift and befriend their countrymen, in a place where they might otherwife become deftitute of fupport, and fick of life, produces likewife an event very favourable to the colony, by inviting into it frequent recruits of very able hands, who add not a little to its population and ftrength. Theoffspring of this part of Britain are extremely numerous and flourifhing in Jamaica. I have heard a computation made of no fewer thanone hundred of the name of Campbel only actually refident in it, all claiming alliance with the Argyle family. There are likewife numbers, who, though related to other noble flocks of the North, deferve much more refpect from their own intrinfic worth, than from their illuftrious confanguinity. Jamaica,

> В O O K II. С H A P. XIII.
indeed, is greatly indebted to North-Britain, as very near one third of the inhabitants are either natives of that country, or defcendants from thofe who were. Many have come from the fame quarter every year, lefs in queft of fame, than of fortunes; and fuch is their induftry and addrefs, that few of them have been difappointed in their aim. To fay the truth, they are fo clever and prudent in general, as, by an obliging behaviour, good fenfe, and zealous fervices, to gain efteem, and make their way through every obftacle. The Englifh were never charged with a want of benevolence; but, in the exercife of it, they refemble the blind goddefs Fortune, who fcatters her favours with her eyes thut before all that happen in the way to feramble for them. Abftracted from the line I have drawn, the extenfion of friendmip to an undeferving man, for no other reafon but becaufe it was his lot to have been born in the fame parifh, and in preference to one of far greater merit who chanced to be born two or three hundred miles further diftant, is illiberal and unmanly, and betrays a mind enflaved, in the moft contemptible degree, to meannefs and ignorance. In this ifland no diftinctions ought to fubfift, but of good or bad citizens. They who would feem to maintain any other by their conduct, however they may affect to difdain them with their lips, are of narrow fouls, and no true friends to the intereft and peace of the ifland.

The lower order of white people (as they are called here) are, for the moft part, compofed of artificers, indented fervants, and refugees.

The firft live well here, and get high prices for their work \([x]\). Of the fecond clafs, great numbers ufed formerly to be brought from
[ \(x\) ] I felect a few articles, from which fome idea may be formed of the expence of building in this ifland; and, for better comparifon with the London prices, the fums are all reduced to fterling.

from Scotiand, where they were actually kidnapped by fome montraders, in or near Glafgow, and mipped for this ifland, to be fold to be ranged in ars term of fervice. On their arrival, they ufed and chufe. But this traffic has ceafed for fome years, fince the defpotifm of clanfhip was fubdued, and trade and induftry the out lazinefs and tyranny from the North of Scotland. The drove ficers, particularly ftone-mafons and mill-wrights, from that artiof Britain, are remarkably expert, and in general are fober, fruat and civil; the good education, which the pooreft of them regal, having great influence of their morals and behaviour. I do know whether the overfeers of plantations fhould be confide not a feparate clafs: they are, for the moft part, fuch as have per in through a regular courfe of fervice in the agriculture of this cound try; and, if they are fenfible and thrifty, they enjoy very comfortable lives, and fave enough out of their falaries to buy a ferto ment of their own: fome of them have even become poffeffors, time, of very large properties, and made a very refpectable fin here. Subordinate to the overfeers are the plantation book-keepers, warehoufe or ftore-keepers, diftillers, tradefimen, and drivers, or fub-overfeers; but for this laft office Negroes are moftly employed.

The crimp's office has fupplied no fmall number of inferior fervants. This office has the fingular faculty of qualifying any man whatever for any art or myftery he inclines to follow in the colonies, and by no other magic than a common indenture; carpenters, who never handled a tool; bricklayers, who fcarcely know a brick from a ftone; and book-keepers, who can neither

\section*{BOOK II, CHAP. NII.}
write nor read. Many of thefe menial fervants, who are retained for the fake of faving a deficiency, are the very dregs of the three kingdoms. They have commonly more vices, and much fewer good qualities, than the flaves over whom they are fet in authority; the better fort of which heartily defpife them, perceiving little or no difference from themfelves, except in fkin, and blacker depravity. By their bafe familiarity with the worft-difpofed among the flaves, thay do a very great injury to the plantations; caufing difurbances, by feducing the Negroes wives, and bringing an odium upon the white people in general, by their drunkenuefs and profligate actions. In fact, the better fort of Creole Blacks diflain to affociate with them, holding them in too much contempt, or abhorrence.
Although the gaol-delivery of Newgate is not poured in upon this ifland; yet it is an occafional afylum for many who have deferved the gallows. Thefe fellows are no fooner arrived, than they cheat away to the right and left, and off again they ftart; carrying all away with them, except the infamy of their proceedings, which they leave behind, as a memento, to thew the impropriety of admitting any other than honeft men to be members of an induftrious colony.
Formerly convict-felons were tranfported hither; but the inconvenience attending the admiffion of fuch mifcreants obtained the inhabitants a relief from them. While the traffic for Scotch fervants lafted, the legiflature of the ifland lent their helping hand to give it encouragement; and, in 170 , it was enacted, that a mafter of any fhip, importing thirty white men fervants at one time, fhould be for that voyage exempted from paying all port-charges. If any of the fervants fo brought in fhould happen to remain undifpofed of at the expiration of thirteen days after their arrival, the receivergeneral was directed to take charge of them, upon paying to the importer a certain fum per head. He was then to fend them to the cuftos of that pariih, where the greateft deficiencies were; and the treafury was reimburfed by the perfon, or planter, on whom they were quartered. It is curious to remark the prices which at that time were fet upon thefe fervants, and to compare them with what are paid at prefent,

\section*{Vol. II.}

\section*{JA MA I CA.}

Every fervant, English, Scotch, Welfh, or of the iflands of Jerfey, Gurernfey, or Man, if in time of war, per head,

Irifh fervants, in time of war,
Ditto, in time of peace,
Convicts are excepted out of this act; and none have of late years been fent over, unlefs to the regiments, whole fervice here is not much advanced by fuch recruits. The cafe of this deprecation of the Irifh I am not informed of; but poffibly they were more turbulent, or lefs fkillful in work, than the others. They are in very different eftimation in South Carolina; where what are denominated bog-trotters, or fuch as have been accuftomed to the boggy grounds of Ireland, are in great requeft for cultivating their rice-fwamps, for which work they are particularly excellent, and generally turn out very induftrious.

But to compare the different expence of indented fervants in 1703 and now. At that time they were obliged, by a law of the ifland, to ferve feven years, if under eighteen years of age; and, if above that age, the term of four.
The fervice therefore of a man, above eighteen
years old, might then be purchafed for a term
of four years, in time of peace, for -
Such a fervant, at the prefent time, would con-
tract only for four years, at from \(35 \%\) to \(40 \%\) per annum, befides his paffage. He therefore colts the importer, for his paffage, - - 14 His wages for four years, at the loweft rate of

The difference is,
A planter therefore could, at that time, hire eleven fervants at no greater charge, for importation and fervice, than is now given for
one. The proportion of deficiency will fad as follows:
1703, A proprietor of 300 Negroes, 120 head of flock,
quota of fervants 17 ; charge, - - \(f_{2} 23^{8}\) 1770, A proprietor of 300 Negroes, 120 head of flock, quota of fervants II; charge, - - - - 1694

\section*{BOOK II. CHAP. XIII.}

291
It is no wonder, therefore, that the planters do not fupply their deficiencies as formerly, by importing indented fervants, but rather pay the penalty, which was fixed, in the year 1715 , at \(13 \%\) per annum, and rarely exceeds that fum now, it being feldom doubled; or elfe pick up any tranfient vagabonds that chance to fall in their way, and will ferve for \(15 \%\) or \(20 \%\). a year.

The firft deficiency-law, paffed in 168 r , required a greater proportion. According to this, the fame proprietor muft have kept thirty-three. This may account for the greater proportion of white inhabitants in thofe days, when fuch fervants were to be procured at the moft trifling expence, and maintained at a very cheap rate. In their condition, they were little better than flaves during their term of fervice. They were allowed yearly three fhirts, as many pair of drawers, thoes and ftockings, and a hat or cap; which were probably of very wretched ftuff, as the penalty for not making fuch an allowance was no more than forty hillings. Their fubfiftence was directed to be four pound weight of good flefh or fifh per week, with a fufficient quantity of plantation provifion, fuch as yams, \&c.; and they were fubjected to various penalties for mifdemeanour; viz.

For laying violent hands on their employer; a twelvemonth's extra fervice.-Embezzling or wafting goods, of above 40 s . value; two years extra fervice.-Getting a fellow-fervant with child; a fervice of double the time the woman had to ferve.Marrying without the confent of their mafter or miftrefs; two years extra fervice.-Abrenting from fervice without leave; one week's fervice for every day's abfence.-Wilfully catching the venereal, or other difeafe; or wilfully getting broken bones, bruifes, \&c.; to ferve double the time thereby loft, and for all charges thereby occafioned, at ros. a month, after the expiration of their in-dentures.-Concealing a fervant, or flave; one year's fervice, or a whipping of thirty-nine lames, at the option of the injured party, on conviction before a juftice.-Stealing timber, or tanning-bark; 31. penalty, upon conviction.-Forging a certificate of freedom; on conviction, to be pilloried, and lofe both ears.

The only material provifions in their favour were, that they thould not be whipped naked, without order of a juftice of the
\[
\mathrm{P}_{\mathrm{p} 2} \text { peace; }
\]

\section*{J A M A I C A.}
peace; nor be turned off, when grown infirm, under pretence of giving them freedom; nor be buried until the body had been viewed by a juftice of the peace, conftable, tything man, or two neighbours.

But the penal claufes of thefe acts have long fince been extinct; and at prefent the white indented fervants are laid under few reftrictions, except fo far as refpects their forving out their term. And by a later law, paffed in 1736, the mifbehaviour of fervants during their contraat, and all differences between them and their mafters (overfeers of fugar-plantations excepted) are to be heard and determined before two juftices of the peace, according to the wature of the cafe, and without appeal, fave that they are to inflict no punifhment extending to life or limb. Where they have not frefl meat, they are allowed four barrels of beef per anmum, with. flour, or bread-kind in proportion; but, in general, their allowance is not limited; and the tradefmen and better fort mefs with the, overfeer of the refpective plantations, unlefs he thinks proper to keep a feparate table for them, which is fometimes the cuftom ons very large eftates, where they rarely eat any falt-meat, except for a forenoon luncheon:

Any mafter of a fhip attempting to carry off the ifland, or run away with another perfon's white indented fervant, without a dif-a charge from the employer, is, on convictions, to be adjudged guilty, of felony, without benefit of clergy, and to fuffer accordingly.

Many of the artificers who have come under thefe contracts, if they were fober and diligent, have fettled afterwards in the ifland, and acquired very handfome fortunes, particularly the Scotch. That part of Britain has likewife furnifhed fome of the ableft furveyors known here. There are generally twelve of thefe, who. are commiffioned by the governor, give bond in \(300 \%\) for the faithfal execution of their office, and are put under feveral regulations by law, This bufinefs fwas formerly very profitable; and ftill. is \(f o\) in the hands of able draughtimen, the charges of making. plans being extremely high : befides, the ignorance and knavery of furveyors, formerly employed to run out the wiod-lands, have caufed fuch errors as to breed numberlefs difputes concerning the true fixings and boundaries even to this day; and the adjuftment \({ }_{3}\)

\section*{B OOK II. CHAP. XIII.}
of thefe contentions is a perpetual fund for employing and fupporting the profeffors of the geometric art.
The Jews were very early fettled in this ifland, attrated no lefs by the quantity of gold and filver brought into circulation here, than the mild difpofition of the government towards them. In fome of the other fugar-illands they were profcribed, by admitting the evidence of pagan flaves againft them in the courts of juftice. Yet, although this government was comparatively lenient, they were opprefficd, in fome inftances, couformably to that perfecuting fpirit which zealous Chriftians ufed antiently to manifeft towards all thofe who differed from them in matters of faith, particularly Jeivs, Turks, and Infidels. But it muft be owned, that the rafcally tricks, for whicin both antient and modern Jews have always been diftinguithed, may have ferved not a little to embitter the popular hatred againft them. In I68I, a law paffed in Jamaica to prevent clipping and falfifying of coin, and debafing of gold and filver wares. The Jews were, at that time, the principal workers in gold and filver. Their fondnefs for this craft in all ages is remarkable, and proves the gainfulnefs of it; and it is fill more fo, that perhaps there feldom has been fuch a law enacted in any country, whiclr did not abound with thefe Jewifh artifts.

I think it was in the reign of William III, that the council of this ifland addreffed the crown to expel all the Jews from this part of the Britifh dominions, not for the fubftantial reafon above affigned, but for a very whimfical one, viz. becaufe "they were de"fcended from the crucifiers of the bleffed Jefus.". I need not mention, that his majefy did not think fit to comply with their requef. The gentlemen were not deep enough read in hifory to difcover, that the Romans, and not the Jews, punifhed by crucifixion. But, if they fuppofed the Jews of Jamaica to be the lineal defcendents from that part of the Jerufalem mob which accufed our Saviour before the Roman goverror, and, by importuning for his execution, became participes criminis, and fo tranfmitted the guilt down to their third and fourth generations; we muft admire their fkill in pedigrees, who could thus trace the line of defcent through a courfe of near feventeen centuries. In thefe days of ignomance, and long after, they were not taxed like other fubjects,

\section*{J A M A 1 C A .}
but obliged to raife among them a certain annual tribute, which the affembly varied at pleafure. During the government of Sir Thomas Lynch, they were affeffed the annual fum of \(750 \%\)., befides one fhilling in the pound on their rents. In governor Molefsworth's time, they began to make a confiderable figure, and were permitted to ereet fynagogues, and perform divine worfhip according to their own ritual. And from this period we begin to date their deliverance out of bondage in the ifland.
It is uncertain, whether at the fame period they purchafed the intereft of a commander in chief to obtain the royal inffruction, forbidding the governor for the time being to give affent to any bill impofing this partial taxation; but it was probable from this origin their cuftom began of prefenting every new governor, upon his arrival, with a peace-offering, confifting of a purfe of doubloons. I have heard, that the firft oblation of this fort was, for decency-fake, conveyed in a \(p y\); ; whence it has obtained this nick-name. The fimaller douceur, prefented to a lieutenant-governor, is fyled a tart; and the ftill fmaller perquifite, to the fecretary, a tartlet \([y]\). Oppreffion had taught them, that no argument was fo powerful as this in foliciting for protection. It muft be acknowledged, however, that thefe people have fhewn themfelves very good and ureful fubjects upon many occafions. When the French iuvaded

Pittoles.
 To the governor's, \&c. fecretary, - - \(\quad\) - 50 I fhall take the opportunity of mentioning here, what I omitted in the proper place, that the governor's fecretary has no fixed fallary; nor any fees allowed by law, except a trifling fum on certificates of freedom taken out, which are renewable only once in feven years: but his income is rated by fome at about 1000 l . fterling per annam; and by others much higher. It arifes from the gratuities he receives on all civil and military commiffions and warrants iffued by the governor, efpecially upon entrance of the latter into office; at which time it has been often the practice to renetv fuch commiffions, \&c. merely to put money into the fecretary's pocket. And fome governors have condefcended to take a fhare in the profits; for they are fometimes confiderable, fifty pitoles having often been given for an honorary poft in the militia. Other emoluments accrue from let-pafies, granted to foreign reffels entering Port Royal harbout' (which may be reckoned anong the number of impolitic reftricions laid upon the trade of the ifland); likewife from orders for furveying crown-lands, and fats; and, in fhort, from every other influment vefting any office, preferment, or commiffon, within the governor's gift or appointment. But the prineipal harvelt is gleaned, in time of war, from the grant of letters of marque, and flags of truce.

\section*{BOOK II. CHAP. XIII.}
this iffand during the government of Sir William Beefton, they oppofed the enemy with great courage. Their knowledge of foreign languages, and intercourfe with their brethren, difperfed over the Spanifh and other Weft-India colonies, have contributed greally to extend the trade, and increafe the wealth, of the ifland; for they have always been the chief importers of bullion : and the riches they acquire to themfelves are expanded in effect to the public welfare; for they are not mere brokers and money-holders that may remove ad libitum; they are allowed to purchafe lands and tenements, and actually poffefs a large thare of both. This gives them a folid attachment to the intereft and fecurity of Jamaica; which they confider as their home. Their affection is fill further Atrengthened by the affurance, that, under other governments, they would not be indulged with the enjoyment of the fame rights, privileges, and immunities, which they now hold undifurbed. The provincial laws, it is true, lay them under fome few reftrictions (if they can be properly called fuch, for they rather feem exemptions from burthen, than privations of any benefit).

They may not officiate, nor write, in any of the public offices. They muft fupply their deficiencies out of their own nation, and not by indented Chriftian fervants; but they are allowed to hire Chriftians for this purpofe.

Their religion neceffarily excludes them from exercifing any poft under the government above the rank of conftable ; but the policy of the ifland requires all of them, without diftinction, to bear arms in the militia: If they cannot, on account of their religion, hold pofts of profit, they are neverthelefs excufed, for the fame reafon, from troublefome offices, that have no profit annexed to them, which are here exceedingly numerous: fo that the balance, upon the whole, feems much in their favour. The lenity of the laws, which tolerate them in the free exercife of their religion and \(\mathrm{cu}-\) ftoms, permit them to hold landed property, protect them equally with other fubjects in the poffeffion and enjoyment of it, and load them with no partial or oppreffive taxations, altogether forms a very ample compenfation for the want of a voice in the legiflature, or courts of juftice. They are confequently contented and happy under this government; and would be more \(f_{0}\), if it was not for their
their own little fchitms in religious matters; for they are divided into two factions, or feets ; one of which, called the Sinoule Jeres, are not acknowledged orthodox by the reft, on account of their having, through the rigours of the inquifition in the Portuguefe and Spanith dominions, relaxed in fome indifpenfable rituals, or intermarried with Chriftians; by which abomination, they have polluted the pure Ifraelition blood with the corrupt ftream of the Gentiles. The Smoufes have therefore a diftinat conventicle, or meeting, of their own, at a private houfe, where they vociferate, to the great difturbance of the neighbourhood.

The chief men among the Jews are very worthy perfons, and ought not to be reproached for the vices and villainies of the lower rabble, fince they ftrive all in their power to put them in the way of earning their livelihood honeftly: and, although fome fraudulent bankruptcies now and then happen among the poorer and more knavilh tribe ; yet there are no common beggars of their nation, the elders having an eftablifhed fund for the relief of all their poor. They traffic among the Negroes chiefly in falt-fifh, butter, and a fort of cheap pedlary wares, manufactured by their brethren in England. But among the chief men are feveral very opulent planters, and capital merchants, who are connected with great houfes in the city of London. It has been a very ftriking remark, that the multitude of them fettled in this ifland, the purchafes they are continually making both of houfes and lands, and the vaft wealth they collectively have ftaked here, are fure indications that they are delighted with the mildnefs and equity of the government, and reft fatisfied, that their property is entirely fafe, and fecurely held; from a conviction, "that a place of fuch "great importance to the mother-country will never be neglected, " nor fail of receiving all due care and protection." Some perfons have affirmed, that the Jews of this ifland are not fuch rigid obfervers of the Mofaic ritual as their brethren of other countries. Many of them have been charged with the heavy accufation of gratifying their appetites now and then with a pork dinner without licence; and others are faid to purchafe a difpenfation for it of the rabbi, after the manner of Roman catholic epicures in the Lent feafon. Indeed, the Wef-India pork is of fo exquifite a flavour,
that, if Mofes had ever tafted it, he certainly would not have been fo unkind towards his followers as to include it in his catalogue of non-eatables; for I do not know any thing more likely to convert a Jew who wavers in faith in this part of the world, than the temptation of this delicious food; and it may be owing to the juft confideration of human frailty, that the rabbis here are too politic to interdict abfolutely the moderate ufe of it to the members of their congregation, or perhaps to abftain wholly from it themfelves. In regard to other fects, fome quakers were formerly fetted here, who came principally from Barbadoes. They had a meeting-houfe in Kingfton and a burial ground, fituate Weft from the town, the walls of which are fill remaining. They afterwards difperfed, and the greater part retired to New-England and Philadelphia. Very few here at this time openly profefs themfelves of this order. The chief inducement for their quitting Jamaica probably was no other than the indifpenfable obligation impofed by its laws, on every man in the ifland, to bear carnal weapons in the militia. This ordianance was incompatible with their non-refifting tenets; and all fuch as adhere to them fo rigidly, are doubtlefs very unfit inhabitants for a fugar-colony, which cannot be defended either from foreign or inteftine enemies by a flock of fheep. In 1732, there appears to have been a remnant of them in the illand; for a law, paffed in that year, entitles them to vote at elections, proving their qualification by affirmation, inftead of oath.
A party of Moravians are fettled here, who in fome particulars feem to hold refemblance to the quakers. They are chiefly, I believe, confined to an eftate in the parifh of St. Elizabeth. In the year 1763 , the frecholders of that parifh prefented a petition to the affembly, fetting forth, "that, for fome years part, many per-, " fons, who called themfelves Moravians, had arrived there; that " they always refufed to do military duty, pleading an exemption " by act of parliament, of which they had parcicularly availed " themfelves during the late rebellions; that it was conceived fuch " a pretext entirely fruftrated the ends of the deficiency-law, and " prevented a number of white perfons, capable of bearing arms, " from being employed upon the eftates where thefe drones had " met with encouragement." It does not appear that the affembly Vol. II.

Q q
: interfered
interfered at all in this matter. It was thought fufficient, perhaps, that they fhould be left to thofe penalties and articles of war, to which men of every perfuafion are liable in this ifland during martial law. The evafion of thefe fchifmatics is not founded on indifputable grounds; for the act of parliament \((=2\) George II. cap. \(30[z]\) ), which they fet up to fkreen themfelves, feems reftricted to the congregation of unitas fratrum, or Moravians, fettled in the North-American provinces. This act admits them to the privilege of making folemn affirmation, inftead of oaths or affidavits, in civil cafes; and difcharges them from perfonal fervice in a military capacity, provided they pay fuch fum of money as may be affeffed or rated on them, in lieu of perfonal fervice: and, to prevent all doubt of their being of the congregation, they muft produce a certificate of their being members of it, figned by fome bifhop of their church, or paftor, neareft to the place of their refidence; and muft likewife folemnly affirm, that they are members as before-mentioned; otherwife they are not entitled to the benefit of the act. It feems pretty evident from hence, that this act does not extend to Jamaica, becaufe the laws here exempt no man from military fervice, except the council and fuperannuated perfons; and admit no fine or affeffment in lieu of any man's perfonal duty. Every proprietor of landed eftate here holds under exprefs conditions contained in his patent, that he fhall perfonally bear arms to repel invafions, and fupprefs infurrections; and his refufal to do fo would make his patent voidable. It is true, the owners of thefe Moravian properties, being non-refident, efcape from perfonal fervice; but they ought to employ fuch agents, or fervants, in the management, who will yield due obedience to the laws of the colony. That exemption cannot poffibly be legal, or juftifiable, which, if it extended to all, would endanger the ruin of the colony. What, for example, would become of it, if the feduction of their example fhould make converts of all the militia in the ifland, fo that every man of them might turn Moravian, and fet up the plea of confeience to excufe himfelf from his proper fhare of the general duty and fervice, which the very being of the inland
[J] N. B. This net prohibite thern from ferving on juries, or being evidences in criminal

\section*{snter。}

\section*{BOOK II. CHAP. XIII.}
has rendered indifpenfable to all? The confequence is evident. In order, therefore, that this fect may quietly enjoy their religious feruples, but at the fame time make them inoffenfive to the public weal, every Moravian proprietor ought to compound for the perfonal fervice of himfelf, his fubftitutes, and fervants, who are members of the fame church, by being fubjected to a double de-ficiency-tax; which is the only fair compenfation, becaufe it leaves them the alternative of providing an equal number of fervants who will fight, in the room of thofe whore hands are tied up by confcience. Nor is this repugnant to their principles; for although they refufe carrying arms, yet they profers willingnefs to contribute towards the pecuniary charge of war; which the quakers refufe. Of the two fects the Moravians are therefore the better citizens, fince nothing can be more hateful in the prefent ftate of the world than the pufillanimous doctrine of non-refiftance againft an invading enemy.

The Moravians poffefs a large tract of land in the province of Philadelphia, where they have a fettlement called Bethlem, and are very zealous in converting the Indians. They publifh no creed, nor confeffion of faith; ufe mufical inftruments in their worfhip; and preach in an enthufiaftical ftrain. The ftyle of their hymns has fuch a pruriency and wantonnefs in it, as can fcarcely be reconciled with the chafte fervour of a truly pious mind. They are faid to encourage marriage among their young people, but in a ftrange way; for they are obliged to caft lots, in order to preferve an equality among themfelves. Whether their doctrines are ftrictly confiftent with good morality, or not, we are not particularly informed. Kalm mentions, that at Philadelphia, where they have a large meeting-houfe, they ufed to perform fervice, not only twice or three times every Sunday, but likewife every night after it grew dark, till they were interrupted by fome wicked young fellows, who accompanied every line and ftanza of their hymns with the fymphony of an inftrument which founded like the note of a cuckoo. And, upon repeated ferenadings of this kind, they difcontinued their nocturnal conventions. We are to fuppofe, that nothing paffed among thefe godly people in the dark but what was extremely decent and proper; yet the convenience which this veil
\[

\section*{300}

J A M A I C A.
might adminifter to the practical performance of thofe rapturous carefles, ravifhing extafies, thrilling tranfports, with all the kiffings, pantings, fighings, dyings, which fill up the lufcious meafure of their pfalmody, might doubtlefs be apt to ftrike the imaginations of the prophane, and incline them to fufpect, that the faints behind the curtain voluptuoufly mingle a little of the fenfual with their fpiritual feelings.

Thefe which I have mentioned are all the fchifmatics publickly avowed in Jamaica: not but there are many Roman catholics, and diffenters, who enjoy their refpective opinions in private, without feeking to form themfelves into diftinct congregations, or to put themfelves to the expence of maintaining preachers or paftors.

The laws of the ifland are favourable to the admiffion of foreigners. They empower the governor, by inftrument under the broad feal, to naturalize any alien who may come to fettle in the ifland, having firft taken the oath of allegiance: but they are required, within thirty days after their arrival, to give in their names, trades, vocations, \&c. to any cuftos, or chief magiftrate, and apply for their letter of naturalization.

They are then declared entitled to the fame immunities, rights, laws, and privileges, of the ifland, and in as full and ample manner, as any of the king's natural-born fubjects, or as if they themfelves had been born within any of his majefty's realms or dominions. And, in order that fuch patents may be obtained at little charge, the governor is to receive five pounds currency, and his fecretary ten fhillings, each, and no more, for paffing them.

This matter is further regulated by act of parliament, paffed \({ }_{13}\) George II.; the object whereof feems to be, that aliens, tranfporting themfelves into any of the Britifh colonies, fhould become entitled to the rights of natural-born fubjects, on condition that they remain and refide therein for a certan term of years: for a multitude of traufient perfons, transferrics their effects, perhaps for the fake of traffic, and having no fixed abode, nor making any fettlement, would add nothing to the fecurity of a colony; but, on the contrary, might do it hurt, by carrying off the profits, gained on their trade, to be fpent in a foreign dominion, and by cxcluding many real Britifh merchants and traders, who would otherwife

\section*{BOOK II. CHAP. XIII.}
otherwife have fettled in the colony. It enacts, that all perfons, born out of his majefty's liegeance, who thall refide for the face of feven years, or more, in any of his American colonies; and that fhall not have been abfent from thence above two months at any one time; and that fhall take and fubferibe the oaths of allegiance; or, if quakers, fubfrribe the declaration; or, if Jews, with the omiffion of fome Chriftian expreffions); and fhall alfo fubfrribe the profeffion of their Chriftian belief (Jews excepted), as directed by the ftatute, I William and Mary, before any judge of the colony they fhall refide in; and fhall have received the facrament of the Lord's-fupper in fome proteftant or reformed congregation in Great-Britain, or in the faid colonies (quakers and Jews excepted), within three months of his or her fo qualifying, and producing a certificate thereof, figned by the minifter of the congregation, and attefted by two witneffes; a certificate of all thefe preliminaries, having been complied with under the refpective colony feal, fhall be a fufficient proof of his or her being thereby become a natural-born fubject of Great-Britain to all intents and purpofes whatfoever: and the fecretary of the colony fhall amually tranfmit, to the board of trade and plantations, lifts of the faid perfons fo naturalized, to be regiftered in their office: provided that fuch perfons thall not thereby be enabled to be a privycounfellor, or a member of either houfe of parliament, or capable of taking, having, or enjoying, any office, or place of truft, within the kingdoms of Great-Britain or Ireland, either civil or military ; or taking any grant from the crown of any lands, tenements, \&c. within the faid kingdoms.
In the conftrution of this act, I do not apprehend, that the abfence of two months implies any thing more than a removal to fome other clominion, or territory, of fome foreign prince. An alien, qualified as the law directs, may have his domicile, or fixed habitation, in one of the Britifh colonies, and neverthelefs, by reafon of his vocation, either of a merchant or feaman, be obliged \({ }_{2}\). from time to time, to pafs to and fro between that and fome other Britifh colony, fo as to be abfent neceflarily above two months at one time. But, where his freehold and family are lacated, there is (properly fpeaking) his domicile, or home. And it would be in-

\section*{J A M A I C A.}
confiftent with the liberal fpirit and meaning of the act to fay, that an alien, having qualified in Jamaica, and purchafed a fettlement in that ifland, but making a voyage every year to the North-American continent, in the way of trade, or for health, which might caufe him to be abfent from Jamaica fomewhat more than two months, fhould therefore forfeit his acquired right of a natural-born uubject. It is more reafonable to conclude, that a refidence in any of the Britifh American colonies for the term of feven years, without having been abfent above two months from Britifh territory during that fpace, effectually mects the intention of the act.

Foreign proteftants, naturalized under the Jamaica law, poffefs all the rights of natural-born fubjects quoad that ifland. They may purchafe lands, or inherit, or take grants from the crown; have a right to reprefent, and be reprefented, in the affembly, if they enjoy the neceffary qualification in eftate; and may hold and exercife places of truft in the military and civil departments; for fome of them have acted under commiffion as field-officers in the militia, judges in the fupreme court and common-pleas, juftices of the peace, \&cc.; and the late fecretary, Mr. Ballaguire, was a naturalized German. But I do not remember any in the privy-council.

The claufe, 7 and 8 William III. § 12, enacting, " that all "places of truft, or what relates to the treafury of the Britifh "Wert-India iflauds, thall be in the hands of native-born fubjects "of England or Ireland, or of the faid iflands," feems not to exclude thofe who by naturalization are made natural-born.

The foreigners, who have taken the benefit of thefe acts, are not very numerous in Jamaica; but, if any townhips thould be formed in the central parts of the ifland, perhaps none would be fitter for the purpofe of inhabiting them than French proteftants.

I fhall next confider the ftate of the foldiers quartered here. The ifland ftood but little in need of regular forces, for its defence, till about the year 1730; when the depredations and outrages, committed by the Maroons (or wild Negroes, as they were called) had gone on to fuch a length, that the fettlements were in many parts deferted, and the imhabitants thrown under the oppreffion of very heavy taxes, for fupporting a continual inteftine war, which greatly interrupted the bufnefs of their plantations. Thefe motiyes

\section*{BOOK II. CHAP. Xill.}
tives engaged governor Hunter to folicit the duke of Newcafte (then at the head of the miniftry) for two regiments of foot; which were accordingly detached from the garrifon of Gibraltar to their affiftance. The people were told, that thefe troops would be no burthen to them, for that they were to be victualed and paid at the national expence, as they had before been at Gibraltar. However, the victualers not arriving in due time, the affembly were called upon to make fome provifion for them in the interim; to which they confented, and paffed a bill for this purpofe, to have a duration for fix months only. The governor had affured them, that, fo foon as the vietualers fhould arrive, the provifions they brought fhould be diffributed inftantly among the troops, that the ifland might not be unneceffarily put to any further expence for their fubfiftence. But no fooner were they arrived, than he caufed the provifions to be fold, and retained the proceeds in his own hands, meauly taking advantage of the preffing neceffity which the inhabitants were under of keeping the regiments, at any rate, for their defence. This proceeding, fo difhonourable on the governor's part, firft gave rife to the country-pay, or allowance, which is now granted by annual bill. Thefe troops were, foon aftewards, difbanded here; and fuch of the men as inclined to ftay were formed into eight independent companies, and kept in pay by the ifland until the Negroes were brought to fubmiffion ; which happened in the adminiftration of governor Trelawny, about the year 1739. In the year 1745, they were incorporated into a regiment, and the command given to that governor. They then became intitled to receive pay from the crown; but, neverthelefs, the affembly made an additional provifion of twenty fhillings per week to each officer, and five fhillings to each private. This pay has fince received confiderable augmentation; and it is at prefent upon the following eftablifhment:

They are likewife allowed to buy their rum free of the inland duty, which is a faving of from 1 s . to Is. 6 d . per gallon; an advantage purpofely given them by the legiflature, that they might be enabled to buy it of the beft quality, inftead of debauching with the balderdafh liquor, fold under the name of rum by the keepers of retail fhops.

The fubfittence is, in the three towns of St. Jago, Kingfton, and Port Royal, paid into the hands of the men; but, in the country-quarters, to their commanding officers, for the ufe of the foldiers. A diverfity of opinion has prevailed in regard to this mode of payment; as the foldiers in fome of the country quarters have, in one or two inftances, appeared to have been defrauded of their dues, or fupplied with putrid and unwholefome provifions, which were fold to them much above their prime-coft. It was argued, that, with money in their hands, the men might purchafe much better in quality, and more in quantity, of frefh meat and wholefome victuals; and that every country. barrack would attract a market for the fale of hogs, poultry, frefh fifh, fruits, and roots, which are articles produced and vended by almoft all the Negroes.

On the other hand, it was alledged, that, by paying the allowance in money to the common foldiers, they would become, in fome degree, independent of their officers; that they would diffipate it in fpirituous liquors, grow enervated with tipling, relaxed in their difcipline, and impaired in their vigour and health.

I do not take upon me to reconcile thefe different opinions; but certain it is, that all the men are not prone to drunkennefs, in particular thofe who have wives and children; that they prefer frefh meat to falt, and the many excellent ronts, pulfe, and herbs, of the ifland produce, to bifcuit, which will not keep any long time undecayed in this climate; that a pound of frefh meat is far more nutritive, and will go much further in fatisfying hunger, than a pound of beef hardened with falt; that falt-beef creates an artificial thirft ; and that this produces a conftant appetite for drink,

\section*{BOOK II. CHAP. XIII. 305} and therefore moft likely, either to make fots of thofe men who were not fuch before, or to confirm others more inveterately, in their drunken habits; and, lafly, that money and a demand are the only things requifite to procure a regular and well-fupplied market in a country which abounds with provifion. There is, moreover, a very great difference in the air and fituation of the different barracks; fo that, in fome of them, a diet on falt provifion, concurring with any local depravity of the atmofphere, may difpofe the body to very malignant diftempers; while, in other barracks, the fame diet may prove much lefs injurious to a foldier's health. Thus, of fifty unfeafoned men, quartered at an inland barrack for three years, not one died of any diftemper; though other companies of the fame regiment, quartered on unhealthy fpots near the coaft, were fickly, and buried feveral of their men. I would not mean to infinuate any thing to the difadvantage of fo refpectable a body as the officers in general are; but fome among them are not immaculate; nor is it to be fuppofed but they are fubject, like other men, to human frailties. The worthier part of them, I am convinced, upon a due confideration of the fubject, might fall on fome plan of regulation, to the end that thefe benevolent aids, which the inhabitants grant to the poor foldiers and their families, may not be mifapplied; that their health fhould be effectually confulted, as well by feeding them with wholefome provifions, as by reftraining them from the immoderate ufe of finirituous liquors.

An officer, who attends ftrifly to the health of his men in both cafes, certainly renders the moft effiential fervice to the king and to the public, and makes the beft return to the good intentions of the people, by thus fupporting the ability of the troops, to give that protection in time of need, which, I conceive, is the chief defign of their being ftationed in this ifland.
By the encouragements given to the troops, the fervice here is become far lefs difagreeable than in mort other parts of the WeftIndies. The private men, who are married, are, by living in a regular manner, more healthy than the unmarried. The children are very little burthenfome to their parents; and, when a woman has the misfortune of lofing her hufband, fhe continues but a fhort Vol. II.

R r
time

\section*{J A M A I C A.}
time in a ftate of viduity : the fame reafon, which in England might deter any fuitors from addrefling her, namely a crowd of children, is here the certain recommendation to a number of candidates for the honour of her hand; and happy is he, who fucceeds, and gains her in marriage; for he enters into prefent poffeffion of her children's pay, which continues even though fome of them may be capable of earning an income with their own hands. And from this fource, for every able-bodied foldier thus fent abroad from Great-Britain, that kingdom may poffibly receive back, at the time the forces are recalled, a large fock of young recruits, to fupply the loffes occafioned by death during the abode of the regiments in Jamaica. But, if any flay behind, they probably acquire more riches to the nation by exerting their induftry in the colony, than they could have done had they returned to the mother country.
The author of a pamphlet, entitled, "Confiderations upon the " Military Eftablifhments of Great-Britain and her Colonies," recommends to government, " that the troops, intended for garri"foning the Wef-Indies, fhould, after paffing three years at New"York, be removed to the Weft-Indies; and, after three years " longer ftay to garrifon thofe parts, fhould be recalled home, " being firft compleated to their full numbers before their return to "Britain; and fuch numbers to be fupplied by the refpective iflands "and colonies." The former part of this fcheme feems plaufible enough, becaufe the vicinity of New-York to the Weft-Indies may admit of fuch a remove with great expedition and facility; and becaufe the troops, after enduring three North-American fummers, which are even hotter than the fame feafon of the year in our Weft-India iflands, may be fuppofed tolerably well feafoned to the change. But their cloathing thould be very different for the Weft-India fervice from what might be thought neceflary in NorthAmerica; and they ought to arrive at their Weft-India deftination in December, January, February, or March, that they might not, in feparating to their country-quarters, be expofed to either the inclemency of the rainy feafons, or the great heats of the fummer months. The author's propofition about recruiting the regiments on the fpot is by no means admiffible wieh refpect to the Weft-In-
dia iflands; for, if it was practicable to make fuch drains from thefe iflands, already in want of white men, for fuch a purpofe, they would occafion a very great infecurity, by wafting the fubftantial ftrength of every colony every third year, and by that means endanger our fettlements in them, without effecting any collateral benefit either to the army or nation; for fuch recruits would be of very little fervice after their emigration to Europe ; the change to a damp, cold climate, and hard duty, would foon render them invalids. Befides, their inlifting of hired and indented fervants (for none other are likely to offer) would inevitably obftruet the planting bufinefs, and occafion continual quarrels and law-fuits between the planters and the military; which, in their confequences, might prove extremely embarraffing to government both abroad and at home.

The laws, for inffance, of Jamaica inflict a penalty of \(200 \%\). on any captain, or commander, of any thip, attempting to carry away a hired or indented fervant as a failor or paffenger. They make the carrying off any fuch fervant, by any perfon, felony, without benefit of clergy; and impofe a penalty likewife of \(20 \%\). on every perfon hiding, hiring, or employing, a hired or indented fervant without a difcharge from his laft mafter or employer, attefted by a juftice of the peace. The parliament, no lefs attentive to the fecurity and welfare of the Weft-India iflands, in 1746 , paffed an act to prevent the impreffing of mariners in thofe parts; and, in 1756, when the defence of the North-American provinces required that indented fervants fhould be inlifted, they took care to reftrain the permiffion, by the moft exprefs words, to "the Britifh colo" nies upon the continent of America;" which evinces their caution, that no pretence might be made for extending this aet to the Weft-India colonies.
The North-American recruits are, in general, unfit for the Weft-India fervice; for which reafon (unlefs there appears any invincible neceffity to juftify fuch an expedient), it might be more ad. vifeable to recruit from Europe than from that continent; for the North-Americans are far lefs hardy than the Eurapeans, and, during the laft and former war, died in numbers whenever they were removed to a diftance from home. It is very difficult for
them to inure themfelves to a climate different from their own; nor do they bear tranfplanting into the Southern colonies fo well as the Britifh, Irifh, Germans, or Swifs. I cannot therefore but furmife, that fuch a project, if carried into execution, would prove in the iffue no better than a plan for facrificing triemnially fo many hundred poor victims, and effentially diftreffing the fervice. In the expectation of two thoufand effective foldiers to be conftantly kept here, the inhabitants expended near 100,000 \% in building barracks for their accommodation; which are fo difpofed among the different parifhes, that they are calculated to afford a general protection to the internal parts, and capable of holding more than that number of men, befides their officers. But, in 1764 , when the 49 th and \(74^{\text {th }}\) regiments were relieved, the people had the mortification to find, that, inftead of two regiments of one thoufand men each, they were to be protected by two of four hundred and fifty each; which was lefs than one half the complement they expected; and confequently their barracks, on which they had laid out fuch large fums of money, raifed by taxes, which fell very heavily on the planters, for three years, were left to moulder into decay, for want of being tenanted.

The fmalleft number that ought be cantoned here, for the internal fecurity of the ifland in time of peace, is an eftablifhment of one thoufand and thirty-five effectives, to be diftributed according to the plan hereafter defcribed; by which, every one of the new barracks would be garrifoned, and kept from going to decay; and the guard fo well balanced in the refpective counties and parifhes, in proportion to the danger they may feverally be expofed to from fudden infurrections, as would probably be an effectual curb upon the mutinous and difaffected. But, to form a body for this eftablifhment, either two reduced regiments fhould be raifed to five hundred and twenty-five men each; or one regiment, under the name of the Royal American, be compleated to one thoufand and thirty-five men. In time of war, if government fhould judge two regiments neceffary for the better defence of the ifland againft foreign enemies, it will appear from the following fate of the barracks, that they are in a condition to accommodate between two and three thoufand men exclufive of their officers.

Befides thefe, there are feveral old barracks, which were built during the war with the Marons, and are ftill kept in repair; viz. in Middlefex fix; Surry two; Cornwall three; in all, eleven; which are capable of holding a confiderable body of men, if occafion fhould ever require their being garrifoned [a]. A governor once replied, when he was folicited for a party to be quartered at one of the inland barracks, " that his majefty's troops were fent " hither to guard the coafts, not to protect the internal diftricts " from Negroe infurgents." But it is hoped that every adminiftration will not be guided by fo abfurd a policy. The men of property in this ifland pay an ample contribution, in order that it may be protected, not fo much from French or Spaniards, as againft the machinations of the many thoufand flaves, which, in proportion as the fettlements advance further and further into the heart of the
[a] There would be molt convenient for receiving the corps of rangers propofed, under the head of "Militia."
country,
country, grow the more formidable from their multitude: I fpeak chiefly of imported Africans, who are the moft to be feared. Men nuft firft believe their life and fortune tolerably fecure, before they will venture to fettle. But if the troops, inftead of being garrifoned in the internal parts, where the greateft danger lies, where the fettlements are few and fcattered, and incapable of defending themfelves, are ranged along the coafts, which in time of peace require no fuch guards, and at any time are leaft healthy, and too remote from the centre to afford a feafonable relief; can the inhabitants be faid to receive that degree of protection from them, to which they are entitled? It may perhaps be never prudent to leave the maritime forts without fome garrifon, to prevent furprizes; and the larger towns require a fufficiently ftrong guard, for many obvious reafons. To anfwer therefore every one of thefe purpofes, we may fuppofe the following eftablifhment of a corps, for this fervice, to confift of
Twenty companies, of fifty privates each, _ 1000 Two field-officers,
Twenty captains,
Twenty lieutenants,
Thirty furgeons mates,
Two furgeons in chief,
Forty ferjeants,
Twenty corporals, The complement total, \(\frac{134}{1034}\)
The offices of barrack-mafters and adjutants might be executed by fome of the cour of officers.

For their cantonment in time of peace, I propofe the following fcheme; by which it will appear, that the principal towns and port are well guarded, and the mof unfettled diftricts as well defended, as the number can admit on the fcale of an equal protection.

BOOK II. CHAP. XIII.

The additional expence to the ifland for their maintenance would (by the beft calculation I can make) not exceed the prefent annual fupply more than \(7000 \%\), even allowing one third of men and officers to be married, and to have one child each at an average, which is certainly a very large reckoning; fo that the inand, if it be thought neceffary, is capable of fupporting fuch an augmentation; much more fo (it may be imagined) at this time than fome years ago, when the affembly petitioned for a conftant eftablinhment of two thoufand men, which would have brought upon them an additional charge, of at teaft 18,000 l. per annum.

In regard to the ftate of health of the foldiers here, the following table will convey fome idea of it. I have already noticed feveral, caufes of their ill health in particular cantonments, which may admit of fome fit regulations for their remedy. The complement. of the two regiments, landed here in June, 1764 , and lately relieved, confifted, as I am informed (at four hundred and fifty each seduced eftablifhment), of nine hundred effectives; and it is proper
to remark, that the 3 th was kept at head-quarters and neighbourhood; and the 66th at the out-pofts.

Deaths.

According to this table, of the 36 th there died, per annum, one in every fourteen; and, of the 66th, one in every eleven. The fmalleft lofs of the \(3^{6 \text { th }}\) was about one in twenty; and, of the 66th, about one in nineteen. The havoc among the 66th, on the firft year of their arrival, I have accounted for, in fpeaking of the quarters of Black River and fome other out-pofts. In that year a detachment was fent on the Havannah fervice; and the fate of the troops appeared, from the return then laid before the arfembly, as follows; viz.
\begin{tabular}{l}
500 Men \\
Detachment, \\
Effectives remaining, \\
In the horpital,
\end{tabular}\(\quad\)\begin{tabular}{l}
301 \\
104 \\
905
\end{tabular}

Of thofe in hofpital, the governor mentioned that feveral were recovered fit for duty fince the laft returns had been made; and that others were in a fair way.

The calculations, which Dr. Price has made, are; Deaths, - 1 in \(20^{\frac{3}{4}}\), London; - 1 in \(19 \frac{\pi}{2}\), Vienna; - per annum.

Now, it is worthy experiment, whether, by proper diet of frefh meat, a moderate allowance of the beft rum, and care in removing all nuifances, and fources of putrid diftempers, from the feveral barracks in this ifland, the deaths might not be reduced to
the ftandard of London or Vienna. Let us however compare the above account (bad as it may feem) with two examples, one taken from the Eaft, and the other from the Weft-Indies. It was not long fince given in evidence, before the Houfe of Commons, that the climate of the Eaft-Indies deftroyed 700 out of 1000 men , in one campaign after their arrival. On the expedition to St. Vincent, one regiment buried 122 in one year, and 309 in three; the average of which is about I in every 4. The truth is, as Dr. Lind has well obferved, that every ifland in the Weft-Indies, and other parts of the world, has its healthy and unhealthy fpots. The nature and exigencies of the fervice prevent the troops, fent over to garrifon our larger iflands, from being kept on any one particular fpot, which might be felected on account of its good air ; in fome cafes neceffity, in others inattention to the important evils, which originate from feemingly trifling caufes, have occafioned the erection of barracks in very improper fituations; near fwamps, the oozy banks of rivers, and ftinking lagoon waters. Sometimes an injudicious pofition of the fick wards and offices, has thrown a conftant annoyance of an impure air upon the healthy ; and fometimes a tendency to ficknefs, and bad fevers, has arifen from the very materials with which the barracks have been built. Thus, the barracks in Clarendon and at Bath, being of ftone, were found infalutary to the men lodged in them, until the walls were lined with plaifter. Some fpecies of ftone are extremely porous, imbibing and tranfuding moifture freely ; others are fo firm and compat in their texture, that they condenfe the watery particles in damp weather upon their furface, which trickle down the fides of walls, or pafs off again in a reek. Stone buildings, without fome precautions, are not wholefome hatitations in the Weft-Indies. They ought to be furrounded with a fhed, or piazza, to keep off the beating of heavy thowers; the walls within thould either be lined with a facing of brickwork, plaiftered, or of boards, fet off about 1 or 2 inches, leaving a fpace behind for the free circulation of air between, in order to prevent their becoming damp. The ill contrivance of the barrack at Lucea, I have noticed in the account of Hanover parifh; if the hofpital there, the ftercorary, and kitchen, were changed to leeward of the dwelling, this barrack is in other refpects not ill fituated for health. The fame Vol. II,
remark
remark may be applied likewife, to fome other barracks in the inand, which require more windows for admitting the air, proper remedies for damp walls, the draining away of fagnant water, and removal of the fick wards and offenfive fmells, to a quarter where they may not incommode the men who are in health.
Reafon and experience point out, that men, coming from a cold into a hot climate, fhould make the change at that feafon of the year, when the degree of heat is leaft at the place of their deflination; by which means, the tranfition will be more gradual, and therefore productive of a lefs violent fhock to the conftitution. On their firft arrival, the change of climate moft commonly brings on a diarrhoea. If the men at this time, and during the fucceeding twelve months, are not hindered from befotting themfelves with new rum, or from dieting too conftantly upon falt filh, falt beef or pork, and rancid butter; they will probably be feized with violent fevers of the putrid clafs, and it may be expected that many of them will die.
The moft wholefome beverage for them would be fugar and water, with or without a moderate allowance of old rum; what is fill preferable, is the cool drink, prepared here by many of the free Negroe and Mulatta women, who vend it cheap to the foldiers. It is made with a mixture of fugar, guaicum chips, and ginger, infufed together in hot water, and afterwards worked into a ferment with a piece of frefh gathered chaw-ftick; which, by the quantity of fixed air contained in it, foon excites a confiderable froth, and imparts a flight bitter, of a very agreeable flavour. This drink, when cool and depurated, is racy and pleafant, extremely wholefome, and, if taken in too large quantities, intoxicates in fome degree, but without caufing any ill effect to the conftitution. This liquor might eafily be brewed twice or oftener in the week, at the barracks, and drank by way of a change. The plantains, yams, and caffiva bread, are nutritious, wholefome, and, after a little ufe, preferred by moft of the foldiers to flour bread or bifcuit at their principal meal, and are far cheaper. The potatoes and cocos are not lefs nourifhing. Half a pound of what is called in England make-weight beef, confifting of the coarfer parts, with fome of thefe roots, the efculent herbs of the country, fuch as the colalu,

\section*{BOOK lI, CHAP. XIII.}
colalu, ocra, \(E^{c}\). every where to be had in ahundance, with a fall feafoning of the country pepper to correct their flatulence, would make a molt wholefome and ftrengthening mefs for one or two men, and at no greater charge than about \(6 d\). or at mont \(7 \frac{1}{2}\) d. currency.

Particular attention ought likewife to be given to the quality of the water, with which the men are fupplied. The barracks at Port Royal and Fort Augufta are ferved from the Rio Cobre, a perfon being paid about \(400 \%\). per annum for this purpofe: it would properry be the furgeon's duty to examine this water from time to time, left, to fave a little trouble, it should be taken up too near the mouth of the river, and fo be impregnated with the fall water in the harbour: it ought likewife to be fuffered to fettle for forme time in calks or jars, that it may not be drank in a turbid fate, which would probably occafion fluxes.
It was intended, fome time fince, to form a ciftern at Port Royal, to be lined with lead, for holding water for the ufe of the troops quartered there : but it may not be improper to remark here, by the way, that water, ftanding for any time in a leaded veffel, becomes impregnated with the poifonous qualities of that metal; and from late difcoveries, and many well-attefted facts, has been found to produce obstinate conftipations, and cholicky diforders in the bowels, and not unfrequently paralytic complaints. The water at Rock Fort is brackish aud unwholefome; but the officer commanding there, being allowed a boat, and fix Negroes to navigate it, might eafily fupply that fall garrifon from Kingfon. At thole places (if any fuch there are in this inland) where none other than brackifh water can poffibly be procured, it may be rendered potable and wholefome by distillation [b]; or by fuffering it to percolate through find, with which feveral puncheons, open at one end, might be filled to one third of their depth.

Coolnefs of dress is another effential article, whenever they are on a march in the country. When lieutenant colonel Spragge

\footnotetext{
[b] Captain Wallis, of his majeft's flip Dolphin, mentions, that in 5 hours and a quarter's diftillation, he obtained from 56 gallons of fea water fix and thirty gallons of frefh, at an expence of nine pounds weight of wood, and fixty-nine pounds weight of coals. Thirteen gallons and two quarts remained in the fill; and that which came off, had no ill tate, nor (as he had often experienced) any hurtful quality.
}

commanded a party of the forty-ninth regiment, againt the Maron Negroes, he provided his men with flannel jackets lined with liuen ; this was their only covering overthe fhirt. In the day. time, they wore the linen next their bodies, and at night the roollien : in this drefs, they were cool by day, fufficiently warm at night, and went through an aftonifhing courfe of fatigue, without injury to their healths; not one of the party having fallen fick during the whole time of their being on that fervice.
The laws of the inand contain very few particulars relative to the regular troops. The hiring, concealing, employing, entertaining, or carrying off any foldier belonging to any regiment quartered here, or feaman belonging to any of his majefty's fhips on this ftation, without a difcharge from their commanding officer, fubjects the offender, upon conviction, to the penalty of \(50 \%\); and the perfon fo hired, \(\mho<c\). is admitted an evidence, and entitled to one half the fine for informing.

A foldier, maimed or wounded in any publick fervice, is to be cured and maintained at the publick charge \([c]\).
A lot of land at Bath is referved for erecting an infirmary for fick foldiers, labouring under complaints remediable by the waters; and another lot for a burial-ground.
Contiguous to all the old country barracks, one hundred acres are allotted for the ufe of the foldiers, who may be pofted in them ; but as they have received no garrifons fince the pacification with the Marons, the moft part of thefe lands have been given up to the gentlemen poffeffed of plantations near them, on condition of keeping the buildings in conftant good repair.

Ifhall clofe this account of the white inhabitants, by obferving on the very capital errors which feem to have been committed by different writers in refpect of their number; for fome have not fcrupled to affiert that, in 1720 , the ifland contained 60,000 Whites; and that, in 1740 , the number was but little reduced. It is impoffible to reconcile thefe accounts with the reprefentation made by the board of trade to the houfe of lords in 1734, when \(斤, 644\) was ftated as the whole number of Whites at that time upon the inland. I have fuppofed the prefent number (in the preceding parts of this

\section*{BOOK II. CHAP. XIII.}
work) about 17,000 exclufive, of tranfients, foldiers, and feamen. At the very loweft I could not deduct more than rooo from this calculation; for the towns, villages, and hamlets certainly contain altoge ther not lefs than 9000 ; and 7000 will not be thought too many to allow for the fugar plantations, penns, and fmaller fettlements. In 1750, a gentleman of ability in the ifland made the computation, that it contained 10,000 planters, merchants, fhopkeepers, hired and indentured fervants, and artificers; or upwards. To fuppofe therefore an advance of fix thoufand or more, fince that period, confidering the vaft multiplication of houfes and fettlements, beth in the towns and country parts, feems not at all extravagant. The account of its population about the time of the great earthquake at Port. Royal, as cited by Dr. Browne, and put at 17,307 , is evidently erroneous, having been copied from the eftimate taken when Sir Thomas Modiford was governor, about the year 1670 ; which confounds the Whites with the Blacks, and claffes the whole under the general title of the inhabitants. A more accurate lift was given, during the government of Sir Thomas Lynch, in 1673, which I have quoted at length. This makes the Whites 8,564 , and the whole number of inhabitants, of all complexions, 18,068 . We find by Sir William Beefton's paper (in the firft book, that in \(166_{4}\) the number of regimented Whites was no more than about 3000 ; which, being fuppofed one half of the whole, makes 6000 , befides thof employed in privateering, which may be reckoned about \(800 ;\) total 6,800 .
In 1670 they muftered for the militia, 2,720
And on board privateers,
Allowing two fourths of that number
for women and children, or - 2,600
The whole ftock of Whites amounted to \(\overline{7,800}\), or only 764 lefs than: in the year 1673 , which gives an increafe of about 250 per annum.. In the year 1698 , according to the fame account, the militia: muftered
Allowance for feamen, who were reduced very much in number in confequence of the American.

\footnotetext{
treaty;
}
treaty; and betook themfelves, fome to planting, and fo incorporated with the land-men; and fome to piracy in other parts of

Women and children - \(\quad 2,5 \underline{13}\) and the whole number appears to have been about - 7,539; by fome, computed ro,000. Several defertions happened about this time and afterwards, in confequence of fome arbitrary meafures of government; which doubtlefs reduced the number, and retarded the increafe of the colony: the number which left the ifland was computed at five hundred or upwards.
About the year I 702 , the Negroes imported were 843, exported \(3^{2} 7\); fo that no more than 516 remained to fupply all the plantations in the ifland. Even in 1720, their confumption amounted to no more than 2,249 ; and in 1734 , to 2,904 . If therefore we confider the demand for Negroes, as one fure teft to judge of the increafing population of a Weft-India colony, which it manifertly is; and that the inhabitants were all this while kept almoft perpetually in arms, to oppofe the Marons, who deftroyed many infant fettlements, and hindered others from being formed; I do not think, that the number of Whites can be fuppofed to have rifen at any time much above 8 , or 9,000 , until the pacification with thofe difturbers.

The author of an ingenious tract (ertitled "Account of the European fettlements in America") allots 25,000 Whites to Jamaica If he had meant all the refident Whites, and thofe of white extraction, he would not probably have been very wide of the true ftate; but, if his eftimate includes none other than the unmixed Whites, I judge it much too high an allowance, and the rather, as he has not favoured us with any data, or grounds whereby we might examine how far it fhould be relied on.

For a general rule of loofe calculation, perhaps allowing nine Whites to every one hundred Blacks, will come neareft to exactnefs. To take one example, the board of trade reprefented the number to be \(\%, 644\) in the year 1734. In that year, the number of Negroe

\section*{BOOK II. CHAP. XIII.}
flaves in the ifland amounted to 86,546 . Multiplying therefore 865 (the number of hundreds) by 9 ; the product is 7,785 , or only 141 difference.

Agreeably to the fame rule, we may try what may be fuppofed the prefent number, allowing the flaves to be at this time increafed to 170,000 , and they probably exceed, becaufe many new fugar works have been formed fince the year 1768 ; therefore, 1700

700 only different from the loweft number I have prefumed them.
It would be more agreeable to go upon fure grounds; but where information is defective, as in this cafe, we can only take fome fpeculative line for our guide; and this appears to me to draw as near to precifion, as may be reafonably expected [ \(d\rfloor\).
(d) The many nautical, or feafaring terms of expreffion, in ufe here among the planters from time out of mind; were probably introduced by the firft Englifh fettlers; who, for fome years, alternately followed privateering, and planting. I fhall enumerate a few of them, with their explanation : Cook-room. Kitchen,
Leeruard. Every place fituated to the Weftward;
Windzvard. The contrary.
Store-room. Warehoufe for goods.
Stoaker. The Negroe appointed to ftuff fuel into the holes under the boiless. Probably from the: word floaked or ftopped as a fhip's pump.
Boatfwain of the mill. The Negroe who attends the mill-gang, or feeders.
To rig the mill. To get it ready for putting about.
Mill-tackling. The mule-traces, \(\mathcal{O}^{\circ}\).
Sweeps. 'The arms or levers belonging to the main roller.
Skids. Poles, or levers ufed for putting calks into a boat from the fhore;
Stanchions. Upright pieces of timber in the curing-houfe.
Gangruay. Interval or fpace left for paffage through the middle of the curing-haufe:
Cot. A fettee.
Awning.
Bread-kind. Such roots and fruits of the country as are ufed inftead of bread.
To jerk. To falt meat, and fmoak-dry it.
Birth. An office, place, or employment.
Grog.
\(\left.\begin{array}{l}\text { Grog. } \\ \text { Todidy. } \\ \text { Kill-devil. }\end{array}\right\}\) Liquors, whofe choiceft ingredient is fum
Hand the mug. Carry or bring the mug.
Bowl. Inftead of cup.-As "a bowl of tea," of chocolate, or both; which tern expreffes the large morning-potations of our anceftors here.
Cow. Is the bucancer term, to fignify all forts of horned cattle, Eos \(^{\prime}\)

\section*{S E G T III.}

\section*{Freed Blacks and Mulattos.}

THERE were three claffes of freed perfons here. The loweft comprehended thofe who were releafed from flavery by their owner's manumiffion, either by will or an inftrument fealed and delivered, and regiftered either in the toll-book or the fecretary's office. They were allowed no other mode of trial, than the common flaves, (i.e.) " by two juftices and three freeholders;" for they were not fuppofed to have acquired any fenfe of morality by the mere act of manumiffion; fo likewife they were not admitted evidences againft white or other free-born perfons, in the courts of juftice, nor to vote at parochial nor general elections.

The fecond clafs confifted of fuch as were free-born. Thefe were allowed a trial by jury, and might give evidence in controverfies at law with one another, and in criminal cafes; but only in civil cafes againft white perfons, or againft freed-perfons, particularly endowed with fuperior privileges.

The third contained fuch as, by private acts of affembly, became entitled to the fame rights and privileges with other Englifh fubjects born of white parents, except that they might not be of the council nor affembly; nor judges in any of the courts, nor in the public offices, nor jurymen. Some of them are likewife precluded from voting at elections of affembly-members. There are not any confiderable numbers who have enjoyed the privileges annexed to this latter clafs; they have chiefly been granted to fuch, who were inheritors of large eftates in the ifland, bequeathed to them by their white anceftor.

The freedom of the two former claffes was much enlarged in 1748 , when a law paffed, allowing the manumitted, as well as free-born, to give evidence againft any freed-perfons enjoying the liberty of white fubjects, provided, in refpect to the manumitted, they have received their freedom fix months at leaft antecedent to the time of their offering fuch evidence; and if they fhould be
convicted of wilful and corrupt perjury, they are made liable to the fame punifhment, as the laws of England inflict on this offence.

Thus it appears, that they hold a limited freedom, fimilar to that of the Jews; and it has been often fuggefted by very fenfible men, that it is too circumfcribed, more efpecially in reference to thofe who have large patrimonies in the ifland; who, without any probable ill confequence, might be permitted to have a vote in the veftry, and at the election of members to ferve in the affembly; to write as clerks in fome of the offices; and hold military commiffions in the Black and Mulatto companies of militia; which privileges I will not difpute: but, for many reafons, it were better to confer them on particular or felect perfons, of good education and morality, than to extend them by a general law to many, who, it muft be confeffed, are not fitly qualified for this enlargement.

The defcendants of the Negroe blood, entitled to all the rights and liberties of white fubjects, in the full extent, are fuch, who are above three fteps removed in the lineal digreffion from the Negroe venter exclufive ; that is to fay, real quinterons, for all below this degree are reputed by law Mulattos.

The law requires likewife, in all thefe cafes, the facrament of baptifm, before they can be admitted to thefe privileges. Some few other reftrictions are laid on the firft and fecond clafs. No one of them, except he poffeffes a fettlement with ten flaves upon it, may keep any horfes, mares, mules, afles, or neat cattle, on penalty of forfeiture. This was calculated to put a ftop to the practice of flaughtering the old breed on commons, and putting their own marks upon the young.

But two juftices may licenfe any fuch freed-perfon to keep fuch Itock, during good behaviour.

They who have not a fettlement, as juft mentioned, muft furnifh themfelves with certificates of their freedom, under the hand and feal of a juftice, and wear a blue crofs on the right fhoulder, on pain of imprifonment.
lf convicted of concealing, enticing, entertaining, or fending off the ifland, any fugitive, rebellions, or other flave, they are to forfeit their freedom, be fold, and banifhed.
Vo l. II.
Tt
Thefe

\section*{J A M A I C A.}

Thefe are the principal ordinances of the laws affecting the common freed-perfons; whence the policy of the country may be eafily meafured. The reftraints, fo far as they are laid upon the loweft order juft emerged from fervitude, and who have no property of any confequence, feem very juftifiable and proper; but in refpect to the few who have received a moral and Chriftian education, and who inherit fortunes confiderable enough to make them independant, they may be thought capable of fome relaxation, without any prejudice to the general welfare of the colony; for it deferves ferious reflection, that mof of the fuperior order (for thefe reafons) prefer living in England, where they are refpected, at leaft for their fortunes ; and know that their children can enjoy of rigbt all thofe privileges, which in Jamaica are withheld from their pofleffion.

The flaves that moft commonly gain a manumiffion here from their owners, are
1. Domeficks, in reward for a long and faithful courfe of fervice.
2. Thofe, who have been permitted to work for themfelves, only paying a certain weekly or monthly fum ; many of them find means to fave fufficient from their earnings, to purchafe their freedom.
3. Thofe who have effected fome effential fervice to the public, fuch as revealing a confpiracy, or fighting valiantly againft rebels. and invaders. They have likewife generally been requited with an annuity, from the publick treafury, for life.

Some regulation feems expedient, to give the firft mentioned the means of acquiring their freedom, without the temptation of converting it into licentioufnefs.

In Antigua, every white perfon who beftows this boon upon his flave, accompanies it with fome further grant, enabling him to enjoy his new fation with advantage to himfelf and the community. The law there compels all thefe freed-men, who have not lands wherewith to form a fettlement, to enter themfelves into the fervice of fome family. In Jamaica, where land is a cheap commodity, this is not the cafe. The Negroe receives his manumiffion, but not always a provifion for his future fubfiftence; this defect therefore impels many of them to thefts and other illegal practices,
for a maintenance. A liberty of this fpecies is baneful to fociety ; and it feems to be the proper object of legiflature, to make thefe acts of private bounty fubfervient to, inftead of leaving them fubverfive of, the publick good.
From five to ten acres of ground might very well be fared upon any planter's eftate. Five acres of good foil are abundantly fufficient for one fuch freed Negroe. It may be faid, that fuch a condition, tacked to thefe grants, would hinder men from rewarding their faithful flaves with liberty; but, on the other hand, in a publick view, it is better that the Negroe fhould continue an honeft and induftrious flave, than to be turned into an idle and profligate freeman. All however that is here meant is, that, in imitation of the Antigua law, all thofe freed-men, who have neither lands to cultivate, nor trade to follow, fhould be obliged to enrol themfelves in fome white family, as domefticks; a lift fhould annually be taken, and regiftered, of all the claffes, and their occupations annexed to their names.

I come now to fpeak of the Mulattoes and other cafts, who (in common parlance) all pafs under that appellation. Upon enquiry of the affembly, in the year \(\mathbf{1 7 6 2}\), into the devifes made by laft wills to Mulatto children, the amount in reality and perfonalty was found in value between two and three hundred thoufand pound. They included four fugar eftates, feven penns, thirteen houfes, befides other lands unfpecified. After duly weighing the ill confequences that might befall the colony, by fuffering real eftates to pafs into fuch hands, a bill was paffed, "to prevent the inconveniencies arifing from exorbi" tant grants and devifes made by white perfons to Negroes and the "iffue of Negroes, and to reftrain and limit fuch grants and devi"fes;" this bill enacted, that a devife fiom a white perfon, to a Negroe or Mulatto, of real and perfonal eftate, exceeding in value 2000 l. currency, fhould be void. It has been objected by many, and with great warmth, to this law, "that it is oppreflive in it's "effect, tending to deprive men of their right to difpofe of their " own effects and acquifitions, in the manner moft agreeable to "their inclinations". It may not be improper, therefore, to examine a little into the fair fate of the queftion. That it is repugnant to the fpirit of the Englifh laws, is readily granted, and fo is

Negroe flavery: the queftion therefore arifing from this comparifon will be, Is there or not a local neceffity for laying many reftraints in this colony, where flave-holding is legally eftablifhed, which reftraints do not exift, nor are politically expedient, in England, where flavery is not tolerated? It is a firft principle, and not to be controverted, in political and civil as well as in moral government, that if one perron does any act, which if every other or even many others of the fame fociety were to do, muft be attended with injurious confequences to that fociety, fuch an act cannot in the nature of things be legal nor warrantable. All focisties of men, whereever conftituted, can fubfift together only by certain obligations and reftrictions, to which all the individual members muft neceffarily yield obodience for the general good ; or they can have no juft claim to thofe rights, and that protection, which are held by all, under this common fanction.
In countries where rational freedom is mof enjoyed, as in England, the laws have affixed certain bounds to mens paffions and inclinations, in numberlefs examples; fo a fucceffion to eftates there is regulated more according to the rules of policy, and the good of the community, than to the laro of nature, fimply confidered ; therefore, although a man may be defirous, nay thinks he has a natural right, to determine who thall enjoy that property from time to time after his death, which he acquired by his induftry while living, the law of England, abhorring perpetuities as hurtful to the fociety, defeats this purpofe, and readily gives it's affiftance to bar fuch entails.

The right of making devifes by will was eftablifhed in fome countries much later than in others. In England, till modern times, a man could only difpofe of one third of his moveables from his wife and legitimate children; and, in general, no will was permitted of lands till the reign of Henry the Eighth, and then only a certain portion; for it was not till after the Reftoration, that the power of devifing real property became fo univerfal as at prefent. The antient law of the Athenians directed that the flate of the deceafed fhould always defcend to his legitimate children ; or, on failure of fuch lineal defcendants, fhould go to the collateral relations. In many other parts of Greece they were totally difcountenanced.

\section*{BOOK II, CHAP. XIII.}

In Rome they were unknown till the laws of the twelve tatyles ware compiled, which firft gave the right of bequeathing; and among the Northern nations, particularly the Germans, teftaments were not received into ule. By the common law of England, fince the conquelt, no eftate, greater than for term of years, can be dif. pofed of by teftament, except only in Kent and in fome antient burghs, and a few particular manors, where their Saxon immunities by particular indulgence fubfifted. And though the feodal reftraint on alienations by deed vanifhed very early, yet this on wills continued for fome centuries after, from an apprehenfion of infirmity and impofition on the teftator in extremis; which made fuch devifes fufpicious. Every diftinct country has different ceremonies and re. quifites to make a will compleatly valid; and this variety may ferve to evince, that the right of making wills and difpofing of property after death is merely a creature of the civil or municipal laws, which have permitted it in fome countries, and denied it in others; and even where it is permitted by law, it is fubjected to different reftrictions, in almoft every nation under Heaven. In England, particularly, this diverfity is carried to fuch a length, as if it had been meant to point ont the power of the laws in regulating the fucceffion to property ; and how futile every claim muft be, that has not it's foundation in the pofitive rules of the ftate [ 6\(]\). In the fame kingdom, the inftitution of marriage is regarded as one of the main links of fociety, becaufe it is found to be the beft fupport of it. A promifcuous intercourfe and an uncertain parentage, if they were univerfal, would foon diffolve the frame of the conftitution, from the infinity of claims and contefted rights of fucceffion: for this reafon, the begetting an illegitimate child is reputed a violation of the focial compacts, and the tranfgreffors are punifhable with corporal correction [ \(f\) ]. The civil codes were fo rigorous, that they even madebaftards incapable, in fome cafes, of a gift from their parents. The deteftation in which they have been held by the Englifh laws is very apparent, and may be inferred from the fpirit of their feveral rhaxims: as, "Hæres legitimus eft quem huptice demonftrant \&xc. [g]."
[ \(\epsilon\) ] Black ftone.
[f] 18 Eliz. 7 Jac. I.
[g] A legitimate child is he that is born after wedlock.
"Cui pater ef populus, non habet ille patrem \([b]\) ". "Qui ex damnato "coitu nafcuntur, inter liberos non computentur." So they are liketvife ftyled "flii mullius [ \([\) ]," becaufe their real father is fuppofed to be uncertain, or unknown. The lenity however of the Englifh law at prefent, is fatisfied only with excluding them from inheritance, and with exacting a competent provifion for their maintenance, that they may not become chargeable upon the publick.
The inflitution of marriage, is doubtlefs of as much concern in the colony, as it is in the mother country : perhaps more fo; becaufe a life of celibacy is not equally hurtful in the latter, who may draw recruits to keep up her population, from the neighbouring ftates of Europe. But the civil policy of the two countries, in refpeet to fucceffions to property, differ very materially; fo that, if three fourths of the nation were flaves, there can be no queftion but that the law of laft wills would be modified to a different frame, perhaps carried back again to the antient feodal doctrine of non-alienation, without confent of the lord; which reftraint was fuited to the policy of thofe times, when villeinage prevailed. A man's right of devifing his property by will ought juftly, therefore, from the conftitution of our Weft India colonies, to be more circumfribed in them, than is fitting in the mother ftate. A fubject (for example) in Jamaica ought not to bequeath his whole perfonal eftate which may be very confiderable, to a flave; and, if he fhould do fo, it is eafy to conceive that it would be utterly repugnant to the civil policy of that ifland. The Jamaica law permits the putative father to leave, what will be thought, a very ample provifion, in order to fet his baftard forward in the world; and in all cafes where the father, having no legitimate kiil to whom he may be willing to give his property, where that properry is large, and his illegitimate child may be, by the polifh of a good education, and moral principles, found well deferving to poffers it ; there can be no queftion, but he might be made legitimate and capable of inheriting, by the power of an act of affembly; fince the fame thing has been done in fimilar cafes in England, by act of the parliament. It is plain, therefore, the policy of the
[b] The offspring of promifcuous coujunctions has no father. Marriage afcertains the sather.
[i] Baftards are not endowed with the privilege of children. No man's children.
law only tends to obviate the detriment refulting to the fociety, from foolifh, and indifcriminate devifes; leaving in the breaft of the legiflature to ratify others particularly circumftanced, and which might not be fo likely to produce the fame inconveniences. It is a queftion eafily anfwered, whether (fuppofing all natural impediments of climate out of the way) it would be more for the intereft of Britain, that Jamaica fhould be pofieffed and peopled by white inhabitants, or by Negroes and Mulattos ? - Let any man turn his eyes to the Spanifh American dominions, and behold what a vicious, brutal, and degenerate breed of mongrels has been there produced, between Spaniards, Blacks, Indians, and their mixed progeny; and he muft be of opinion, that it might be much be better for Britain, and Jamaica too, if the white men in that colony would abate of their infatuated attachments to black women, and, inftead of being "grac'd with a yellow offspring not their own [ \(k\) ]," perform the duty incumbent on every good cittizen, by raifing in honourable wedlock a race of unadulterated beings. The trite pretence of moft men here, for not entering into that ftate, is "the heavy and in"tolerable expences it will bring upon them." This, in plain Englifh, is nothing more than expreffing their opinion, that fociety fhall do every thing for them, and that they ought to do nothing for fociety; and the folly of the means they purfue, to attain this felfih, ungrateful purpore, is well expofed, by the profufion and mifery into which their diforderly connexions often infenfibly plunge them. Can we polfibly admit any force in their excufe, when we obferve them lavihhing their fortune with unbounded libe. rality upon a common proftitute? when we fee one of thefe votaries of celibacy grow the abject, paffive flave to all her infults, thefts, and infidelities; and difperfe his effate between her and her brats, whom he blindly acknowledges for his children, when in truth they are entitled to claim twenty other fathers? It is true, the iffue of a marriage may fometimes. lie under fufpicion, through the loofe carriage of the mother; but on which fide does the weight of probability reft, on the virtue of a wife, or the continence of a proftitute?

}

\section*{J A M A C A.}

Very indigent men may indeed, with more colour of propriety, urge fuch an argument in their defence; but the owner of a large fortune poffeffes what is a vifible demonftration, to prove the fallacy of his pretence. Such a man is doubtlefs as able to maintain a wife, as a miftrefs of all the vices reigning here; none are fo flagrant as this of concubinage with white women, or cohabiting with Negreffes and Mulattas, free or flaves. In confequence of this practice we have not only more fpinfters in comparifon to the number of women among the natives (whofe brothers or male relations poffers the greateft part of their father's patrimony) in this fimall community, than in moft other parts of his majefty's dominions, proportionably inhabited; but alfo, a vaft addition of fpurious offsprings of different complexions : in a place where, by cuftom, fo little reftraint is laid on the paffions, the Europeans, who at home have always been ufed to greater purity and ftrictnefs of manners, are too eafily led afide to give a loofe to every kind of fenfual delight: on this account fome black or yellow quafbeba is fought for, by whom a tawney breed is produced. Many are the men, of every rank, quality, and degree here, who would much rather riot in thefe goatifh embraces, than fhare the pure and lawful blifs derived from matrimonial, mutual love. Modefty, in this refpect, has but very little footing here. He who fhould prefume to fhew any difpleafure againt fuch a thing as fimple fornication, would for his pains be accounted a fimple blockhead; fince not one in twenty can be perfuaded, that there is either fin; or fhame in cohabiting with his flave. Of thefe men, by far the greateft part never marry after they have acquired a fortune; but uther into the world a tarnifhed train of beings, among whom, at their deceafe, they generally divide their fubfance. It is not a little curious, to confider the ftrange manner in which fome of them are educated. Inftead of being saught any mechanic art, whereby they might become ufeful to the inand, and enabled to fupport themfelves; young Fufcus, in whom the father fondly imagines he fees the reflected dawn of paternal genius, and Mifs Fulvia, who mamma protefts has a moft delicate ear for mufic and French, are both of them fent early to England, to cultivate and improve the valuable talents which nature is fuppofed to have fo wantonly beftowed, and the parents, blind with folly,

\section*{BOOK II. CHAP. XIII.}
think they have difcovered. To accomplifh this end, no expence nor pains are fpared; the indulgent father, big with expeclation of the future eclat of his hopeful progeny,

\section*{"difdains}
"The vulgar tutor, and the ruftic fchool,
" To which the dull cit' fends his low-born fool.
" By our wife fire to London are they brought,
"' To learn thofe arts that high-bred youths are taught;
"Attended, dreft, and train'd, with coft and care,
" Juft like fome wealthy duke's apparent-heir."
Mafter is fent to Weftminfter, or Eaton, to be inftructed in the elements of learning, among ftudents of the firft rank that wealth and family can give: whilf Mifs is placed at Chelfea, or fome other famed feminary; where the learns mufic, dancing, French, and the whole circle of female bon ton, proper for the accomplithment of fine women. After much time and money beftowed on their education, and great encomiums, year after year, tranfmitted (by thofe whofe intereft it is to make them) on their very uncommon genius and proficiency, at length they return to vifit their relations. From this period, much of their future mifery may be dated. Mifs faints at the fight of her relations, efpecially when papa tells her that black \(2 u a / f b b a\) is her own mother. The young gentleman too, after his introduction, begins to difcover that the knowledge he has gained has only contributed to make him more fufceptible of keen reflections, arifing from his unfortunate birth. He is foon, parhaps, left to herd among his black kindred, and converfe with 2 uafbee and Mingo, inftead of his fchool-fellows, Sir George, or My Lord; while mademoifelle, inftead of modifh French, muft learn to prattle gibberifh with her coufins Mimba and Cbloe: for, however well this yellow brood may be received in England, yet here fo great is the diftinction kept up betweers white and mixed complexions, that very feldom are they feen together in a familiar way, though every advantage of drefs or fortune fhould centre with the latter. Under this diftinction, it is impoffible but that a well-educated Mulatta muft lead a very unpleafant kind of a life here; and jufly may apply to her reputed father what Iphicrates faid of his, "After all your pains, you have

Vot. II.
\[
\mathrm{U} u
\]
" made
" made me no better than a flave; on the other hand, my mother " did every thing in her power to render me free." On firft arriving here, a civilized European may be apt to think it impudent and fhameful, that even bachelors fhould publickly avow their keeping Negroe or Mulatto miftreffes; but they are ftill more fhocked at feeing a group of white legitimate, and Mulatto illegitimate, children, all claimed by the fame married father, and all bred up together under the fame roof \([n]\). Habit, however, and the prevailing fafhion, reconcile fuch fcenes, and leffen the abhorrence excited by their firft impreffion.
To allure men from thefe illicit connexions, we ought to remove the principal obflacles which deter them from marriage. This will be chiefly effected by rendering women of their own complexion more agreeable companions, more frugal, trufty, and faithful friends, than can be met with among the African ladies. Of fome probable meafures to effect this defireable purpofe, and make the fair natives of this illand more amiable in the eyes of the men, and more eligible partners in the nuptial ftate, I have already ventured my fentiments. A proper education is the firft great point. A modeft demeanour, a mind divefted of falle pride, a very moderate zeal for expenfive pleafures, a fkill in oeconomy, and a conduct which indicates plain tokens of good humour, fidelity, and difcretion, can never fail of making converts. Much, indeed, depends on the ladies themfelves to refcue this truly honourable union from that fafhionable deteftation in which it feems
[ \(m\) ] Reafon requires, that the mafter's power hould not extend to what does not appertain to his fervice. Slavery fhould be calculated for utility, not for pleafure. The laws of chatity arife from thofe of nature, and ought in all nations to be refpected. If a law, which preferves the chartity of flaves, be good in thoie ftates where an arbitrary power bears down all before it, how much more fo will it be in monarchies! and how much more ftill in republics! The law of the Lombards has a regulation which ought to be adopted by all governments. "If a mafter debauches " his flave's wife, the flave and his wife fhall be free;" an admirable expedient, which, without feverity, lays a powerful reftraint on the incontinency of matters. The Romans erred on this上ead: they allowed an unlimited foope to the mafter's luft; and, in fome meafure, denied their flaves the privilege of marrying. It is true, they were the loweit part of the nation; yet there thould have been fome care taken of their morals, efpecially as, in prohibiting their marriage, they corrupted the morals of the citizens.

So thinks the inimitable Montefquieu. And how applicable thefe fentiments are to the fate of things in our ifland, I leave to the difpaffionate judgement of every man there, whether married or fingle.
to be held; and one would fuppofe it no very arduous tafk to make themfelves more companionable, ufeful, and efteemable, as wives, than the Negreffes and Mulattas are as miftrefles: they might, I am well perfuaded, prove much honefter friends. It is true, that, if it thould bea man's misfortune to be coupled with a very profligate and extravagant wife, the difference, in refpect to his fortune, is not great, whether plundered by a black or by a white woman. But fuch examples, I may hope, are unfrequent without the hufband's concurrence; yet, whenever they do happen, the mifchief they occafion is very extenfive, from the apprehenfions with which they ftrike multitudes of fingle men, the viler part of whom endeavour to increafe the number of unhappy marriages by every bafe art of feduction; while others rejoice to find any fuch, becaufe they feem to juftify their preference of celibacy, or concubinage. In regard to the African miftrefs, I fhall exhibit the following, as no unfuitable portrait. All her kindred, and moft commonly her very paramours, are faftened upon her keeper like fo many leeches; while the, the chief leech, confpires to bleed him ufque ad deliquium. In well-diffembled affection, in her tricks, cajolements, and infidelities, fhe is far more perfectly verfed, than any adept of the hundreds of Drury. She rarely wants cunning to dupe the fool that confides in her; for who " fhall teach the wily African "deceit 3 " The quinteffence of her dexterity confifts in perfuading the man the detefts to believe fhe is moft violently fmitten with the beauty of his perfon; in fhort, over head and ears in love with him. To eftablifh this opinion, which vanity feldom fails to embrace, fhe now and then affects to be jealous, laments his ungrateful return for fo fincere a paffion; and, by this ftratagem, fhe is better able to hide her private intrigues with her real favourites. I have feen a dear companion of this ftamp deploring the lofs of her deceafed cull with all the feeming fervency of an honeft affection, or rather of outrageous forrow; beating her head; ftamping with her feet; tears pouring down in torrents; her exclamations as wild, and geftures as emphatic, as thofe of an antient Roman orator in all the phrenfy of a publick harangue. Unluckily, it foon appeared, that, at this very time, fhe had rummaged his pockets and efcrutoire; and concealed his watch, rings, and money, in the
\[
\text { Uu } 2 \quad \text { feather-bed }
\]

\section*{J A M A 1 C A.}
feather-bed upon which the poor wretch had juft breathed his laft. And fuch is the mirror of almoft all there conjunctions of white and black ! two tinctures which nature has diffociated, like oil and vinegar. But, as if fome good was generally to arife out of evil, fo we find, that thefe connexions have been applauded upon a principle of policy; as if, by forming fuch alliances with the flaves, they might become more attached to the white people. Perhaps, the fruit of thefe unions may, by their confanguinity with a certain number of the Blacks, fupport fome degree of influence, fo far as that line of kindred extends: yet one would fcarcely fuppofe it to have any remote effect ; becaufe they, for their own parts, defpife the Blacks, and afpire to mend their complexion ftill more by intermixture with the Whites. The children of a White and Quateron are called Englifh, and confider themfelves as free from all taint of the Negroe race. To call them by a degree inferior to what they really are, would be the higheft affront. This pride of amended blood is univerfal, and becomes the more confirmed, if they have received any fmattering of education; for then they look down with the more fupercilious contempt upon thofe who have had none. Such, whofe mind has been a little purged from the groffeft ignorance, may wifh and endeavour to improve it fill more; but no freed or unfreed Mulatto ever wifhed to relaple into the Negro. The fact is, that the opulent among them withdraw to England; where their influence, if they ever poffefled any, ceafes to be of any ufe. The middle clafs are not much liked by the Negroes, becaufe the latter abhor the idea of being flaves to the defcendants of flaves. And as for the lower rank, the iffue of cafual fruition, they, for the moft part, remain in the fame flavifh condition as their mother; they are fellow-labourers with the Blacks, and are not regarded in the leaft as their fuperiors. As for the firftmentioned, it would probably be no differvice to the ifland, to regain all thofe who have abandoned it. But, to fate the comparifon fairly, if their fathers had married, the difference would have been this; their white offspring might have remained in the colony, to ftrengthen and enrich it: the Mulatto offspring defert and impaverifh it. The lower clafs of thefe mixtures, who remain in the ifland, are a hardy race, capable of undergoing equal fatigue with the Blacks, above

\section*{BOOK II. CHAP. XIII.}
above whom (in point of due policy) they ought to hold fome degree of diftinction. They would then form the centre of connexion between the two extremes, producing a regular eftablifhment of three ranks of men, dependent on each other, and rifing in a proper climax of fubordination, in which the Whites would hold the higheft place, I can forefee no mifchief that can arife from the enfranchifement of every Mulatto child. If it be objected, that fuch a plan may tend to encourage the illicit commerce of which I have been complaining; I reply, that it will be more likely to reprefs it, becaufe, although the planters are at prefent very indifferent about the birth of fuch children upon their eftates, knowing that they will either labour for them like their other flaves, or produce a good price, if their fathers fhould incline to purchafe them; yet they will difcountenance fuch intercourfes as much as lies in their power (when it thall no longer be for their intereft to connive at them), and ufe their endeavours to multiply the unmixed breed of their Blacks. Befides, to expect that men will wholly abftain from this commerce, if it was even liable to the feveref penalties of law, would be abfurd; for, fo long as fome men have paffions to gratify, they will feek the indulgence of them by means the moft agreeable, and leaft inconvenient, to themfelves. It will be of fome advantage, as things are circumffanced, to turn unavoidable evils to the benefit of fociety, as the beft reparation that can be made for this breach of its moral and political inftitutions. A wife phyfician will ftrive to change an: acute diftemper into one lefs malignant; and his patient compounds for a flight chronic indifpofition, fo he may get relief from a violent and mortal one. I do not judge fo lightly of the prefent ftate of fornication in the ifland, as to fuppofe that it can ever be more flourifhing, or that the emancipation of every Mulatto child will prove a means of augmenting the annual number. The retrieving them from profound ignorance, affording them inftruction in Chriftian morals, and obliging them to ferve a regular apprenticeThip to artificers and tradefmen, would make them orderly fubjects, and faithful defenders of the country, It may, with greater weight, be objected, that fuch a meafure would deprive the planters of a

\section*{334} J A M A I C A.
part of their property; and that the bringing up fo many to trades and mechanic arts might difcourage white artificers.

The firft might be obviated, by paying their owners a certain rate per head, to be determined by the legiflature. The fecond is not infurmountable; for few or none will be mafter-workmen; they will ferve as journeymen to white artificers; or do little more than they would have done, if they had continued in flavery; for it is the cuftom on moft eftates at prefent to make tradefmen of them. But, if they were even to fet up for themfelves, no difadvantage would probably accrue to the publick, but the contrary. They would oblige the white artificers to work at more moderate rates; which, though not agreeable perhaps to thefe artificers, would ftill leave them an ample gain, and prove very acceptable to the reft of the inhabitants; for to fuch a pitch of extravagance have they raifed their charges, that they tax their employers juft what they think fit ; each man of them fixes a rate according to his own fancy, unregulated by any law; and, thould his bill be ever fo enormous or unjuft, he is in no want of brother tradefmen in the jury-box to confirm and allowit. I fhall not here prefume to dictate any entire plan for carrying this fcheme into effect. This muft be left to the wifdom of the legiflature, and be made confiftent with the abilities of the treafury. In general only I may fuppofe, that for every fuch child, on its attaining the age of three years, a reafonable allowance be paid to the owner: from that period it becomes the care of the public, and might be provided for, at a cheap rate, until of an age fit for fchool ; then be inftructed in religion; and at the age of twelve apprenticed for the term of four years ; after this, be regimented in his refpective diftrict, perhaps fettled near a townfhip; and, when on militia or other public duty, paid the fame fubfiftence per day, or week, that is now allowed to the Marons. The expediency muft be feen of having (as in the French iflands) fuch a corps of attive men, ready to fcour the woods upon all occafions; a fervice, in which the regulars are by no means equal to them. They would likewife form anproper counter-balance to the Maron Negroes; whofe infolence, during formidable infurrections, has been moft infufferable. The beft way of fecuring the allegiance of thefe irregular people muft be by preferving the treaty

\section*{BOOK II. CHAP. XIII.}
with them inviolate: and, at the fame time, awing them into the confervation of it on their part by fuch a powerful equipoife, compofed of men diffimilar from them in complexion and manners, but equal in hardinefs and vigour.

The Mulattos are, in general, well-fhaped, and the women wellfeatured. They feem to partake more of the white than the black. Their hair has a natural curl; in fome it refembles the Negroe fleece; but, in general, it is of a tolerable length. The girls arrive very early at the age of puberty; and, from the time of their being about twenty-five, they decline very faft, till at length they grow horribly ugly. They are lafcivious; yet, confidering theit want of inttruction, their behaviour in public is remarkably decent; and they affect a moderty which they do not feel. They are lively and fenfible, and pay religious attention to the cleanlinefs of their perfons: at the fame time, they are ridiculoufly vain, haughty, and irafcible. They poffers, for the moft part, a tendernefs of difpofition, which leads them to do many charitable actions, efpecially to poor white perfons, and makes them excellent nurfes to the fick. They are fond of fincry, and lavifh almoft all the money they get in ornaments, and the moft expenfive forts of linen. Some few of them have intermarried here with thofe of their own complexion; but fuch matches have generally been defective and barren. They feem in this refpect to be actually of the mule-kind, and not fo capable of producing from one another as from a commerce with a diftinct White or Black. Monfieur Buffon obferves, that it is nothing ftrange that two individuals fhould not be able to propagate their fpecies, becaufe nothing more is required than fome flight oppofition in their temperaments, or fome accidental fault in the genital organs of either of thefe two individuals : nor is it furprifing, that two individuals, of different fpecies, fhould produce other individuals, which, being unlike either of their progenitors, bear no refemblance to any thing fixed, and confequently cannot produce any thing refembling themfelves, becaufe all that is requifite in this production is a certain degree of conformity between the form of the body and the genital organs of there different animals. Yet it feems extraordinary, that two Mulattos, having intercourfe together, fhould be unable to continue their fpecies, the
woman either proving barren, or their offspring, if they have any, not attaining to maturity; when the fame man and woman, having commerce with a White or Blark, would generate a numerous iffue. Some examples may poffibly have occurred, where, upon the intermarriage of two Mulattos, the woman has borne children; which children have grown to maturity: but I never heard of fuch an infance; and may we not fufpect the lady, in thofe cafes, to have privately intrigued with another man, a White perhaps? The furpicion is not unwarrantable, if we confider hoiv little their paffions are under the reftraint of morality; and that the major part, nay, almoft the whole number, with very few exceptions, have been filles de joye before they became wives. As for thofe in Jamaica, whom I have particularly alluded to, they married young, had received fome fort of education, and lived with great repute for their chafte and orderly conduct; and with them the experiment is tried with a great degree of certainty: they produce no offspring, though in appearance under no natural incapacity of fo doing with a different connexion.
The fubject is really curious, and deferves a further and very attentive enquiry ; becaufe it tends, among other evidences, to eftablifh an opinion, which feveral have entertained, that the White and the Negroe had not one common origin. Towards difproving this opinion, it is neceffary, that the Mulatto woman fhould be paft all furpicion of intriguing with another, or having communication with any other man than her Mulatto hunband; and it then remains for further proof, whether the offspring of thefe two Mulattos, being married to the offspring of two other Mulatto parents, would propagate their fpecies, and fo, by an uninterrupted fucceffion, continue the race. For my own part, I think there are extremely potent reafons for believing, that the White and the Negroe are two diftinct fpecies. A certain philofopher of the prefent age confidently avers, that " none but the blind can doubt it." It is certain, that this idea enables us to account for thofe diverfities of feature, fkin, and intelleet, obferveable among mankind; which cannot be accounted for in any other way, without running into a thoufand abfurdities.

\section*{BOOK II. CHAP. XILı.}

The antient fathers of the Chriftian church, difliking the Copernican fyftem, pronounced it damnable and heretical for any one to maintain the doctrine of the antipodes, and the annual motion of the earth round the fun. According to the ecclefiaftical fyftem of thofe days, the fun was made to revolve above three hundred and twenty thoufand miles in the fpace of a minute; but it is found more rational to conclude, and more eafy to believe, that the earth makes one revolution on its own axis once in twenty-four hours; and we have living teftimonies of its having been circumnavigated, and the doctrine of antipodes confirmed beyond a doubt. The freedom of philofophic enquiry may ftill proceed to extirpate old prejudices, and difplay more and more (to the utter confufion of ignorance and bigotry) the beautiful gradation, order, and harmony, which pervade the whole feries of created beings on this globe.

Of the number of the free Blacks and Mulattos in the ifland I have before given an eftimate. They increafe very faft. By an act, paffed in 1761 , they were all required to take out certificates of their freedom, to be figned by the governor. This was a very proper method to come at the knowledge of their number. In 1762, or 1763 , they were found as follows:

They are fince increafed to upwards of three thoufand feven hundred, principally in the towns; and, I think, we may reckon about one thoufand five hundred of them for fencible men, fit for able fervice in the Militia.

I fhall conclude this account of them with a hearty recommendation of fome plan, both for inftructing them in morality, and regimenting their fencible men, to be employed by rotation on conftant duty. I need not recapitulate my former arguments, Yol. II.

\section*{\(\mathrm{M} A \mathrm{R} O \mathrm{~N} \mathrm{~S}[1]\).}

WHEN the Spaniards retreated befure the army under command of Venables, they had with them about one thoufand fives hundred Negroes and Mulattos, many of whom were flaves. Some adhered to their mafters; while athers difperfed, thirty or forty in a gang, to different parts of the mountains, chufing their own leaders; from whence they made frequent excurfions, to harrafs the Englifh foldiers, who had been reprefented to them as bloodthirfy heretics, that gave no qquarter. They frequently killed ftraggleers near the head-quarters; and one night grew fo bold, as to fire a houfe in the very town. Major-general Sedgewick prophefied, in his, letter to Thurloe ( 1656 ), that thefe Blacks would prove thorns in our fides; living as they did in the woods and mountains, a kind of life natural and agreeable to them. He adds, that they gave no quarter to his men, but defiroyed them whenever they found opportunity, fearce a week pafing without their flaying one or two ; and, as the foldiers grew more fecure and carelefs, they became more enterpzifing and bloody. "Having no moral fenfe," continues. he, "nor underftanding what the laws and cuftoms of "civil nations mean, we neither know how to capitulate or dif"c courfe with, nor how to take, any of them. But, be affured, they "muft either be deftroyed, or brought in upon fome terms or 4. other; or elife they will prove a great difcouragement to the fet"tling of people here." What he foretold actually came to pafs. At the latter end of the fame year ( 1656 ), the army gained fome trifliog fuccefs againft them; but this was foon afterwards feverely zetaliated by the alaughter of forty foldiers, cut off as they were carelefsly fambling near their quarters. A party was immediately fent in queft of the enemy, came up with, and killed feven or eight
[1.] Probably derived from the Spanih Mamuno, a porker, or hog of one year old, The name wras furf given to the hunters of wild hogs, to diftinguifh them from the bucaniers, or henters of wibleatte and horfes.

\section*{BOOK II. CHAP. XIM.}
of them. The following year, they difcovered the place where the Blacks held their ufual rendezvous, and gave them fome annoyance. But they fill found means to hold out, until, being hard preffed by colonel D'Oyley, who, by his final overthrow of the Spaniards at Rio Nuevo, having taken from them all hope of future fuccour from their antient friends, they became very much ftreightened, for want of provifions aud ammunition. The main party, under the command of their captain, Juan de Bolas (whofe place of retreat, in Clarendon, fill retains his name), furrendered to the Englifh on terms of pardon and freedom. But other parties remained in the mof inacceffible retreats within the mountainous rvilds; where they not only augmented their numbers by procres ation, but, after the ifland became thicker fown with plantations, they were frequently reinforced by fugitive flaves, and at length grew confident enough of their force to undertake defcents upon the interior planters, many of whom they murdered from time to time ; and, by their barbarities and outrage, intimidated the Whites from venturing to any confiderable diftance from the fea-coaft. One of thefe parties was called the Vermaholis Negroes; in quelt of whom captain Ballard was fent, in the year 1660 , with a detachment, and took feveral of them prifoners. In \(160_{3}\), the lieu: tenant-governor Sir Charles Lyttelton, and his council, illued a proclamation, offering to grant twenty acres of land per head, and their freedom, to all fuch of them as would come in. But I do not find that any of them inclined to accept the terms, or quit their favage way of life. On the contrary, they were better pleafed with the more ample range they poffeffed in the woods, where their hunting-ground was not yet limited by fettlements. They took care that none of the latter fhould be formed; and, for this purpofe, butchered every white family that ventured to feat itfelf any confiderable diftance inland. When the governor perceived that the proclamation wrought no effect upon their favage minds, Juan de Bolas, who was now made colonel of the Black regiment, was fent to endeavour their reduction; but, in the profecution of this fervice, he fell unfortunately into an ambufcade, and was cut in pieces. In March, 1664, captain Colbeck, of the White miditia, was employed for the fame purpofe. He went by fea to the

\section*{J A M A I C A.}

North fide; and, having gained fome advantages over them, he returned, with one who pretended to treat for the reft. This embaffy, however, was only calculated to amufe the Whites, and gain fome refpite ; for they no fooner found themfelves in a proper condition, and the white inhabitants. lulled into fecurity, than they began to renew hoftilities.

Theie Blacks poffefied feveral fmall towns in different divifions of the country; and, about the year 1693 , commenced open war, having chofen Cudjoe for their generaliffimo. They continued to diftrefs the ifland for about forty-feven years; and, during this time, forty-four acts of affembly were paffed, and at leaft \(240,000 \%\). expended, for their fuppreffion. In 1730, they were grown fo formidable, that it was found expedient to ftrengthen the colony againft them by two regiments of regular troops, which were afterwards formed into independent companies, and employed, with other hiired parties, and the whole body of militia, towards their reduction. In the year 1734, captain Stoddart, who commanded one of thefe parties, projested and executed with great fuccefs an attack of their windward town, called Nanny, fituated near Car-rion-crow Ridge, one of the higheft mountains in the ifland, in the neighbourhood of Bath. Having provided fome portable fwi-vel-guns, he filently approached their quarters, and reached within a fmall diftance of them undifcovered. After halting for fome time, he began to afcend by the only path leading to their town. He found it fteep, rocky, and difficult, and not wide enough to admit the paffage of two perfons abreaft. However, he furmounted thefe obftacles; and, having gained a fmall eminence, commanding the huts in which the Negroes were lodged all faft afleep, he fixed his little train of artillery to the b:ft advantage, and difcharged upon them fo brikly, that many were flain in their habitations, and feveral more, amidft the confternation which this furprize occafioned, threw themfelves headlong down precipices. Captain Stoddart purfued the advantage, killed numbers, took many prifoners, and, in fhort, fo compleatly deftroyed or routed the whole body, that they were unable afterwards to effect any enterprize of moment in this quarter of the ifland.

About the fame time, another party of the Blacks (having perceived that a body of the militia, ftationed at the barrack of Bagnal's Thicket, in St. Mary, under command of colonel Charlton and captain Ivy, ftrayed heedlefsly from their quarters, and kept no order) formed an ambufcade to cut them off, and, whilf the officers were at dimer, attended by very few of their men, the Marons rufhed fuddenly from the adjacent woods, and affaulted them. Several pieces were difcharged; the report of which alarmed the militia, who immediately ran to their arms, and came up in time to refcue their officers from deftrution. The Marons were repulfed, and forced to take fhelter in the woods; but the militia did not think fit to purfue them far. Some rumours of this fkirmifh reached Spanifh Town, which is diftant from the fpot about thirty miles; and, as all the circumftanees were not known, the iwhabitauts were thrown into the moft dreadful panic, from apprehenfions that the Marons had defeated Charlton, and were in full march to attack the town. Ayfoough, then commander in chief, fell in with the popular fear, ordered the trumpets to found, the drums to beat, and in a few hours collected a body of horfe and foot, who went to meet the enemy. On the fecond day after their departure, they came up to a place, where, by the fires which remained unextinguifhed, they fuppofed the Marons had lodged the preceding night. They therefore followed the track, and foon after got fight of them. Captain Edmunds, who commanded the detachment, difpofed his men for action; but the Marons declined engaging, and fled different ways, Several, however, were flain in the purfuit, and others made prifoners. Thefe two vifories reduced their ftrength, and infpired them with fo much terror, that they never after appeared in any confiderable body, nor dared to make any ftand. Indeed, from the commencement of the war till this period, they had not once ventured a pitched battle; but fkulked about the fkirts of remote plantations, furprifing ftragglers, and murdering the Whites by two or three at a time, or when they were too few to make any refiftance. By night they feized the favourable opportunity, that darknefs gave them, of ftealing into the fettlements; where they fet fire to cane-pieces and outhoufes, killed all the cattle they could find, and carried off the
flaves into captivity. By this daftardly method of condueting the war, they did infinite mifchief to the Whites, without much expofing their own perfons to danger; for they always cautionfly avoided fighting, except with a number fo difproportionately inferior to them, as to afford them a pretty fure expectation of victory. They knew every fecret avenue of the country; fo that they could either conceal themfelves from purfuit, or form ambufcades, or fhift their ravages from place to place, according as circumftances required. Such were the many difadvantages under which the Englifh had to deal with thefe defultory foes; who were not reducible by any regular plan of attack; who poffefled no plunder to allure or reward the affailants; nor had any thing to lofe, except life and liberty.

Previous to the fucceffes above-mentioned, the diftrefs into which the planters were thrown may be collected from the fenfe which the legiflature expreffed in fome of their. acts. In the year \({ }^{1} 733\), they fet forth, that thefe Blacks had within a few years greatly increafed, notwithftanding all the meafures that had then been concerted, and made ufe of, for their fuppreffion; in particular, that they had grown very formidable in the North-Eaft, NorthWeft, and South-Weft diftricts of the ifland, to the great terror of his majefty's fubjects in thofe parts, who had greatly fuffered by the frequent robberies, murders, and depredations, committed by them; that, in the parifhes of Clarendon, St. Anne, St. Elizabeth, Weftmoreland, Hanover, and St. James, they were confiderably multiplied, and had large fettlements among the mountains, and leaft acceffible parts; whence they plundered all around them, and caufed feveral plantations to be thrown up and abandoned, and prevented many valuable tracts of land from being cultivated, to the great prejudice and diminution of his majefty's revenue, as well as of the trade, navigation, and confumption, of Britifh manufactures; and to the manifeft weakening and preventing further increafe of ftrength and inhabitants in the ifland. We may learn from hence what extenfive mifchief may be perpetrated by the moft defpicable and cowardly enemy. The affembly, perceiving that the employment of flying parties had proved ineffectual, by the length of their marches, the difficulty

\section*{BOOK II. CHAP. XIII,} of fubfifting them in the woods for fo long a time as the fervice required, and the facility with which the Marons eluded their purfuers, ordered feveral defenfible houfes, or barracks fortified with baftions, to be crected in different parts, as near as poffible to the enemy's moft favourite haunts: in every one of thefe they placed attrong garrifon, who were regularly fubfifted, and roads of com. munication were opened from one to the other. Thefe gatrifons were compofed of white and black fhot and baggage Negroes, who. were all duly trained. Every captain was allowed a pay of \(10 \%\); the lieutenants each \(5 \%\); ferjeants \(4 \%\); and privates \(2 l\)., per month. They were fubjected to rules and articles of war; and the whole body put under the governor's immediate order, to be employed conjunctly, or feparately, as he fhould fee occafion. Their general plan of duty, as directed by the law, was to make excurfions front the barracks, fcour the woods and mountains, and deftroy the pro-vifion-grounds and haunts of the Marons; and, that they might not return without effecting fome fervice, they were required to take twenty days provifion with them on every fuch expedition, Every barrack was furnifhed befides with a pack of dogs, provided by the church-wardens of the refpective parifhes; it being forefeen, that thefe animals would prove extremely ferviceable, not only in guarding againft furprizes in the night, but in tracking the enemy.

This arrangement was the moft judicious hitherto contrived for their effectual reduction; for fo many fortreffes, feationed in the very centre of their ufual retreats, well fupplied with every neceffary, gave them a conftant and vigorous annoyance, and, in fhort, became the chief means of bringing on that treaty which afterwards put an end to this tirefome war.

About the year 1738 , the affembly refolved on taking two hundred of the Mofquito Indians into their pay, to haften the fup. preffion of the Marons. They pafled an act 2 for rendering free Negroes, Mulatros, and Indians, more ufeful, and forming them into companies, with proper encouragements. Some floops were difpatched to the fhore; and that number were brought into the ifland, formed into companies under their own officers, and allowed forty fhillings a month for pay, befides fhoes; and white guides were afigned to condut them to the enemy. In this fervice they

\section*{J A M A I C A.}
gave proofs of great fagacity. One of their white conductors, having fhot a wild hog whilf they were on a march, the Indians told him that was not the way to furprize the Blacks, for the noife ferved only to put them upon their guard; and that, if he wanted provifions, they could kill the game equally well with their arrows, or lances, without giving any alarm. It was their practice to obferve the mort profound filence in marching to the enemy's quarters; and, when they had once hit upon a track, they were fure to difcover the haunt to which it led. They effeeted confiderable fervice; and were, indeed, the mort proper troops to be employed in that fpecies of action, which is known in America by the name of bu/J-figbting. They were well rewarded for their good conduct ; and afterwards difmiffed to their own country, when the pacification took place with the Marons. In 1741, the affembly thewed a further mark of efteem for thefe honeft Indians; for, being informed that fome traders belonging to the ifland had made a practice frequently of ftealing away, and felling their children as flaves, which occafioned the Indians of Darien and Sambla to withdraw their friendhip from the Englifh, and embrace alliance with the Spaniards; they pafled a bill, enacting, that all Indians, imported into the illaid for fale, fhould be as free as any other aliens or foreigners; and that all fuch fales fhould, ipfo facto, be void; and the buyer and feller be liable to a penalty of \(50 \%\) each. In 1739, governor Trelawny, by the advice of the principal gentlemen of the ifland, propofed overtures of a peace with the Maron chiefs. Both parties were now grown heartily wearied out with this tedious conflict. The white inhabitants wifhed relief from the horrors of continual alarms, the hardhip of military duty, and the intolerable burthen of maintaining an army on foot. The Marons were not lefs anxious for an accommodation: they were hemmed in and clofely befet on all fides; their provifions deftroyed; and themfelves reduced to fo miferable a condition by famine and inceffant attacks, that Cudjoe (whom I converfed with many years afterwards) declared, if peace had not been offered to them, they had no choice left but either to be ftarved, lay violent hands on one another, or furrender to the Englifh at diffretion. The extremity, however, of their cafe was not at that time known

\section*{BOOK II. CHAP. XIII.}
to the white inhabitants; and the articles of pacification were therefore ratified with the Maron chiefs, who were colonel Cudjoe, captains Accompong, Johnny, Cuffee, and Quaco. By thefe articles it was ftipulated, that they and their adherents (except fuch as had fled to them within two years preceding, and might be willing to return to their owners upon grant of full pardon and indemnity, but otherwife to remain in fubjection to Cudjoe) thould enjoy perpetual freedom: that they fhould poffefs in fee fimple one thoufand five hundred acres of land near Trelawny-Town, in the parifh of St. James; have liberty to plant coffee, cacao, ginger, tobacco, and cotton; and breed cattle, hogs, goats, and any other fock, and to difpofe of the fame; with liberty of hunting any where within three miles of any fettlement \([n]\).

That they, and their fucceffors, fhould ufe their beft endeavours to take, kill, fupprefs, and deftroy, all rebels throughout the ifland, unlefs they fhould fubmit to the like terms of accommodation \([0]\). That they fhould repair at all times, purfuant to the governor's order, to repel any foreign invafion: that, if any white perfon fhould do them injury, they mould apply to a magiftrate for redrefs; and in cafe any Maron fhould injure a white perfon, the offender fhould be delivered up to juftice: that Cudjoe, and his fucceffors in command, fhould wait on the governor once a year, if required: that he and his fucceffors thould have full power to punifh crimes committed among themfelves by their own men, punifhment of death only excepted; and that, in capital cafes, the offenders fhould be brought before a juftice of peace, in order to be proceeded againft, and tried like other free Negroes: that two white men thould conftantly refide with Cudjoe and his fucceffors, to keep up friendly correfpondence. The command of Trelawny Town was limited to Cudjoe during life; and, after his deceafe, to Accompong, Johnny, Cuffee, and Quaco; and, in remainder, to fuch perfon as the governor for the time being may think fit to

\footnotetext{
[ \(n\) ] One thoufand acres have likewife been affigned to Accompong's 'Town, in St. Elizabeth's; and due proportions to the other towns; fecured to their refpective Negroe inhabitants in perpetuity; and a penalty of \(500 \%\) ordained againft any perfon convicted of difturbing their pof-
teffion.
}
[o] This alludes to captain Quao, of the windward party, who did not come in till the following year.
Vol. II. Yy appoint.
appoint. Thefe are the moft material articles recognized by the law. It likewife provides, that no perfon thall feize, detain, or diffurb, any of the Negroes in the pofieffions and privileges thereby granted, under penalty of \(500 \%\); and it allows them, for apprehending and bringing in run-away flaves, ios. per head, with a poundage of 2 s . 6 d . for money difburfed, befides mile-money, according to the difance. Thefe were the Negroes belonging to the leeward towns, Trelawny and Accompong, the former in St. James; the other in St. Elizabeth. Some years afterwards, upon fome difference arifing among the Negroes at Trelawny, as I have heard, concerning the right of command, a fray enfued. The town divided finto two factions; one of which adhered to a new chief, named Furry, and removed with him to another fpot, where they formed a new town, called after his name. In 1740, the like accommodation was entered into with Captain Quao, of the windward party; the purport of which is much the fame as the preceding, except that they are prohibited exprefsly from planting any fugar-canes, except for their hogs; and are to be tried for capital crimes, like other Negroes. The command, upon Quao's death, is fettled to devolve to Captain Thomboy; remainder to Apong, Blackiwall, Clafh; and afterwards to be fupplied by the governor for the time being. It was likewife conditioned, that all fugitive flaves, whon had joined Quao's party, or had been taken prifoners by them within three years antecedent, fhould be delivered up to their refpective owners, upon affurance of pardon and good ufage. This windward party now occupy Scot's Hall, in St. Mary; Moore 'Town (formed upon the defertion of Nanny Town), in Portland and Crawford; or Charles Town, in St. George.
By fublequent lavs, the premium for taking up run-aways was augmented to \(3^{l}\). per head \([p]\), and fome other provifions enaxted: viz. that any Negroes in thefe towns, committing tumult and diAturbance, fhall fuffer fuch punifhment as the white fuperintendant, with four townimen, and the captain commandant, Thall inflict, not extending to life: that the governor fhall iffue commiffions for trial of the offenders: that they fhall not abfent themfelves
[ \(p]\) Py an act paffed fince, viz. in the year 1769 , the premium is reduced to \(2 \%\) per head, or fo sauch on' as the magititate may deem meet; and mile-money at the rate of \(7 \frac{1}{2} d\). per mile.
from

\section*{BOOK II. CHAP. XIII.}
from their refpective towns, without leave in writing from their refpective commanding officer, under penalty, upon conviction before two juftices and three freeholders, of being deprived of freedom, and tranfported off the ifland: the like penalty, for enticing flaves to run away. They are alfo forbidden to purchafe flaves, under penalty of forfeiture, and rool. fine, to be paid by the feller, or other perfon concerned.

Thefe Negroes, although inhabiting more towns than at firft, are diminifhed in their number by deaths, and cohabitation with flaves on the plantations, inftead of intermixing with each other. They have been very ferviceable, particularly the leeward parties, in fuppreffing feveral infurrections. Their captains are diftinguifhed with a filver chain and medal, infcribed with their names: they wear cockades, and are regularly commiffioned by the governor. It is cuftomary for the governors to give audience to their chiefs once a year, and confer fome mark of favour, fuch as an old laced coat or waiftcoat, a hat, fword, fufee, or any other articles of the like nature, which feem moft acceptable. They are pleafed with thefe diftinctions; and a trifling douceur of this fort beftowed annually, accompanied with expreffions of favour, wins their hearts, and ftrengthens their dutiful attachment. It is probable, they would be much honefter allies, and more faithful fubjects, if fome little pains were taken to inftil a few notions of honefty and religion into their minds. The erection of a chapel in each of their towns would be attended with very finall expence; and here they might regularly attend divine worfhip once a week. A fmall addition to the rector's falary would enable him to vifit and difcourfe to them occafionally. The white refidents ought to be thoroughly examined by the governor; and care be taken, that they are men of good morals, fober, and promoters of order and peace in their feveral towns. They fhould be punifhed with exemplary feverity, whenever found guilty of oppreffion, or other ill ufage. And the articles of treaty thould never be infringed by legiflature, while the Negroes conform to them on their part: but, when any deviation is made, it ought in juftice to affect only the contravenors of them. Good faith, good ufage, and moral inftruction, as far as they may be capable of it, are the beft guarantees of their firm allegiance ; a
different meafure of conduct will neceffarily render them difcontented and troublefome.

Tedious and expenfive as the war was, which continued for fo many years before they could be brought to terms, the event was very happy for the illand. The multitude of parties kept on foot, to inveft their quarters, led to the difcovery of various tracts of exceedingly fine land, unknowis before. Many of thefe were brought into cultivation foon after they were reduced; and the roads, which were cut from time to time through the woods, for the better carrying on of military operations, were in confequence found of great ufe to the new fettlers, for carriage of their goods. The treaty, moreover, gave a fecurity to young beginners in the remote parts, even againft any machinations of their own flaves: fo that this conteft, which, while it lafted, feemed to portend nothing lefs than the ruin of the whole colony, became productive of quite contrary effects in the end; infomuch that we may date the flourifhing ftate of it from the ratification of the treaty; ever fince which, the ifland has been increafing in plantations and opulence.

Their manner of engaging with an enemy has fomething too fingular in it to be paffed over. In the year 1764 , when governor Lyttelton paffed through St. James parifh on his leeward tour, the Trelawny Marons attended him at Montego Bay, to the number of eighty-four, men, women, and children. After the white militia belonging to the parifh were reviewed, the fencible men of the black party drew up, impatient to fhew their martial fkill. No fooner did their horn found the fignal, than they all joined in a moft hideous yell, or war-hoop, and bounded into action. With amazing agility, they literally ran and rolled through their various firings and evolutions. This part of their exercife, indeed, more juftly deferves to be fiyled evolution than any that is practifed by the regular troops; for they fire ftooping almoft to the very ground; and no fooner is their piece difcharged, than they throw themfelves into a thoufand antic geftures, and tumble over and over, fo as to be contiuually fhifting their place; the intention of which is, to elude the flot, as well as to deceive the aim of their adverfaries, which their nimble and almoft inftantaneous change of pofition renders
renders extremely uncertain. In fhort, throughout their whole manœuvres, they fkip about like fo many monkies \([q]\). When this part of their exercife was over, they drew their fwords; and, winding their horn again, they began, in wild and warlike capers, to advance towards his excellency, endeavouring to throw as much favage fury into their looks as poffible. On approaching near him, fome, with a horrid, circling flourifh, waved their rufty blades over his head, then gently laid them upon it; whilft others clafhed their arms together in horrid concert. They next brought their mufkets, and piled them up in heaps at his feet, which fome of them defired to kifs, and were permitted. By way of clofing the ceremony, their leader, captain Cudjoe, in the name of all the reft, ftood forth, and addreffed his excellency aloud, defiring the continuance of the great king George's favour and protection ; and that his excellency, as his vice-gerent, would adminifter right and juftice to them, according to the happy treaty and agreement fubfifting between them and the white people of the ifland.

To this the governor replied, that they might depend upon the favour and protection of the great king George; and of his own conftant endeavours likewife, that right and juftice fhould be always done them ; and alfo, that he would take care, that the good underftanding, then fo happily fubfifting between the white inhabitants and them, fhould inviolably be preferved; provided that they, on their parts, continued to be always active and ready in obeying their commanding officer, and doing whatever elfe they had, in the treaty, folemuly promifed to perform. To this they all affented; and then, having a dinner ordered for them, and a prefent of three cows, were difmiffed, and went away perfectly well fatisfied.
I have no certain account of the number of thefe Negroes in their feveral towns at prefent; but the following was the ftate of them in the year \(1749[r]\).
[ 7 ] A bucanier hiftorian tells us, that, having landed with a party at Cofta Rica, the toil of flooting was fifficientiy compenfated with the pleafure of killing the monkies; for at thefe they ufually made fifteen or fixteen flot, before they could kill three or four; fo nimbly did they elude their hands and aim, even after being much wounded: and that it was bigb fiun to fee the females carry their little ones on their backs, juft as the Negroes do their children.
[r] According to a late return, the Negroes of Moore Town are increafed to two hundred; but the whole number of fighting men does not exceed one hundred and fifty; and the whole nunber of Negroes in all che towns is not augmented much beyond the above lift of the year 1749 .

on \(_{4}\{\) "Scot's Hall, in St. Mary, \(\}\) "Fury's, in Sto James, then formed."

J A M A I C A.

The pay to thefe Negroes, when they are upon fervice, is,
To each captain, - per day, 026 Ditto private,

This expence is charged to the amual fund of \(500 \%\) appropriated for the ufe of parties. We may add to this the following eftablifhment, augmented fince 1769 ; viz.
To a fuperintendant-general, \(\qquad\)
\(\qquad\) Currency, \(f\)300 To three white fuperintendants, at \(200 \%\). falary each, per ann. 600 To one ditto, of Trelawny Town, 300 \% ditto, - - 300 To one ditto, of Scot's Hall, \(100 \%\) ditto, - _ 100 \(\begin{array}{ll}\text { To five white refidents, } 40 \% \text { ditto, - } & 200 \\ 500\end{array}\) For parties as above, brought down,

Total, per annum, \(£ \overline{2000}\)
The expence of a curate, to perform divine fervice, baptize,
\(\& \mathrm{c}\). as propofed, may be put at \(50 \%\) each, - £. \(25^{\circ}\) Which would be no great addition to the annual charge. And it is not to be forgotten, that all this money remains to circulate in the ifland, and is of advantage to the fhop-keepers, who fupply thefe Negroes with feveral fmall articles for their cloathing and confumption.

\section*{THE THIRD BOOK.}

\section*{C HAP. I.}

\section*{\(N \quad E \quad G \quad R \quad O \quad E \quad S\).}

ISHALL divide this people into two claffes, the native, or Creole blacks, and the imported, or Africans; but, before I come to fpeak of thofe who inhabit Jamaica, I hall beg to premife fome remarks upon the Negroes in general found on that part of the African continent, called Guiney, or Negro-land. The particulars wherein they differ moft effentially from the Whites are, firlt, in refpect to their bodies, viz. the dark membrane which communicates that black colour to their fkins [a], which does not alter by tranfportation into other climates,
[a] Anatomifts fay, that this reticular membrane, which is found between the Epidermis and the fkin, being foaked in water for a long time, does not change its colour. Monfieur Barrese, who appears to have examined this circumftance with peculiar attention, as well as Mr. Winflow, fays, that the Epidernis itfelf is black, and that if it has appeared white to fome that have examined it, it is owing to its extreme finenefs and tranfparency; but that it is really as dark as a piece of black horn, reduced to the fame gracility. That this colour of the Epidermis, and of the fkin, is caufed by the bile, which in Negroes is not yellow, but always as biack as ink. The bile in white men tinges their fkin yellow; and if their bile was black, it would doubtlefs communicate the fame black tint. Mr. Barrere affirms, that the Negroe bile naturally fecretes itfelf upon the Ept= dermis, in a quantity fufficient to impregnate it with the dark colour for which it is fo remarkable. Thefe obfervations naturally lead to the further queftion, "why the bile in Negroes is black t"
Mr. Buffon endeavours to refolve the former part of this enquiry, by fuppofing that the heat of elimate is the principal caufe of their black colour. "That excefive cold and excelfive heat produce
" fimilar effects on the human body, and act on the fkin by a certain drying quality, which tans it;
"that originally there was but one fpecies of men; and that difference of climate, of manner of
" living, of food, of endemical diftempers, and the mixtures of individuals, more or lefs varied,
" have produced the diftinctions that are now vifible; and that this black colour of Negroes, if they
"were tranfplanted into a cold climate, would gradually wear off and difappear in the courfe of ten
" or twelve generations."
But, to admit the force of this reafoning, we muft fuppofe the world to be inuch older than has been generally believed. The Æthiopian is probably not at all blacker now than he was in the days of Solomon. The nations of Nicaragua and Guatimala, on the American continent, who lie under the fame parallel of latitude as the inhabitants of Guiney, have not acquired this black tincture, although many more generations have paffed fince they were firf difcovered by the Europeans than Mr. Buffon thinks fufficient for changing a Negroe from black to white. How many centuries mulk have revolved before that continent was difcovered, may be imagined from the populous fate of ic in the days of Americus Vefpucius, and the prodigious length of time required for a nation or large fociety of men to grow up, become powerful, warlike, and tolcrably civilized, as the Mexicans

\section*{J A M A I C A.}
climates, and which they never lofe, except by fuch difeafes, or cafualties, as deftroy the texture of it; for example, the leprofy, and accidents of burning or fcalding. Negroes have been introduced into the North American colonies near 150 years. The winters, efpecially at New York and New England, are more fevere than in Europe. Yet the Blacks born here, to the third and fourth generation, are not at all different in colour from thofe Negroes who are brought direetly from Africa; whence it may be concluded very properly, that Negroes, or their pofterity, do not change colour, though they continue ever fo long in a cold climate.

Secondly, A covering of wool, like the beftial fleece, inftead of hair.

Thirdly, The roundnefs of their eyes, the figure of their ears, tumid noftrils, flat nofes, invariable thick lips, and general large fize of the female nipples, as if adapted by nature to the peculiar conformation of their childrens mouths.

Fourthly, The black colour of the lice which infeft their bodies. This peculiar circumftance I do not remember to have feen noticed by any naturalift ; they refemble the white lice in fhape, but in general are of larger fize. It is known, that there is a very great variety of thefe infects; and fome fay, that almoft all animals have their peculiar fort.

Fifthly, Their beftial or fetid fmell, which they all have in a greater or lefs degree ; the Congo's, Arada's, Quaqua's, and Angola's,
were! Further, as this change is fuppofed by Mr. Buffon to be gradual, fome proof of it would doubtlefs appear in the courle of one or two centuries. - But we do not find, that the poiterity of thofe Europeans, who firt fettled in the hottelt parts of the Weft Indies, are tending towards this black complexion, or are more tawny than an Englifhman might become by refiding five or fix years in Spain, and expofing himfelf to the fun and air during his refidence. It would likewife happen, that the progeny of Negroes brought from Guiney two hundred years ago, and tranfplanted into a colder climate, would be comparatively lefs black than the natives of that part of Africa, from whence their progenitors were removed; but no fuch effect has been obfervect. And latly, the whole fabric of Mr. Butfon's hypothefis is fubverted at once, by the race of Albiuoes, in the very heart of Guiney; who, although fubject to the fame intenfe heat of climate, which, he fays, has caufed the black colour of Negroes, are unaccountably exempted from the influence of this caufe, though equally expofed to it. Without puzzling our wits, to difcover the occult caules of this diverfity of colour among mankind, let us be content with acknowledging, that it was juft as eafy for Omnipotence to create black-dkinned, as white-fkinned men; or to create five millions of human beings, as to create one fuch being.
particularly the latter, who are likewife the moft fupid of the Negroe race, are the moft offenfive; and thofe of Senegal (who are diftinguiffed from the other herds by greater acutenefs of underfanding and mildnefs of difpofition) have the leaft of this noxious odour.

This fcent in fome of them is fo exceffively ftrong, efpecially when their bodies are warmed either by exercife or anger, that it continues in places where they have been near a quarter of an hour.

I fhall next confider their difparity, in regard to the faculties of the mind. Under this head we are to obferve, that they remain at this time in the fame rude fituation in which they were found two thoufand years ago.

In general, they are void of genius, and feem almoft incapable of making any progrefs in civility or fcience. They have no plan or fyftem of morality among them. Their barbarity to their children debafes their nature even below that of brutes. They have no moral fenfations; no tafte but for women; gormondizing, and drinking to excefs; no wifh but to be idle. Their children, from their tendereft years, are fuffered to deliver themfelves up to all that nature fuggefts. to them. Their houfes are miferable cabbins. They conceive no pleafure from the moft beautiful parts of their country, preferring the more fterile. Their roads, as they call them, are mere theep-paths, twice as long as they need be, and almoft impaffable. Their country in moft parts is one continued wildernefs, befet with briars and thorns. They ufe neither carriages, nor beafts of burthen. They are reprefented by all authors as the vileft of the human kind, to which they have little more pretenfion of refemblance than what arifes from their exterior form.
In fo vaft a continent as that of Afric, and in fo great a variety, of climates and provinces, we might expect to find a proportionable diverfity among the inhabitants, in regard to their qualifications of body and mind; ftrength, agility, induftry, and dexterity, on the one hand; ingenuity, learning, arts, and fciences, on the other. But, on the contrary, a general uniformity runs through all thefe various regions of people; fo that, if any difference be found, it is only in degrees of the fame qualities ; and, what is more ftrange, thofe of the worft kind; it being a common known proverb, that all people on the globe have fome good as well as ill qualities, except the

\]

\section*{J A M A I C A.}

Africans. Whatever great perfonages this country might anciently have produced, and concerning whom we have no information, they are now every where degenerated into a brutifh, ignorant, idle, crafty, treacherous, bloody, thievifh, miffruffful, and fuperfitious people, even in thofe ftates where we might expect to find them more polifhed, humane, docile, and induftrious. It is doubtful, whether we ought to alcribe any fuperior qualities to the more ancient Africans; for we find them reprefented by the Greek and Roman authors under the moft odious and defpicable character ; as proud, lazy, deceitful, thievilh, addicted to all kinds of luft, and ready to promote them in others, inceftuons, favage, cruel, and vindictive, devourers of human flefh, and quaffers of human blood, inconftant, bafe, and cowardly, devoted to all forts of fupertition; and, in fhort, to every vice that came in their way, or within their reach.
For the honour of human nature it were to be wifhed, that thefe deferiptions could with juftice be accufed of exaggeration ; but, in refpect to the modern Africans, we find the charge corroborated, and fupported by a confiftent teflimony of fo many men of different nations, who have vififted the coaft, that it is difficult to believe they have all been guilty of mifreprefenting thefe people; more efpecially, as they tally exactly with the character of the Africans that are brought into our plantations. This brutality fomewhat diminifhes, when they are imported young, after they become habituated to cloathing and a regular difcipline of life; but many are never reclaimed, and continue favages, in every fenfe of the word, to their lateft period. We find them marked with the fame beftial manners, ftupicity, and vices, which debafe their brethren on the continent, who feem to be diftinguifhed ffon the reft of mankird, not in perfon only, but in poffeffing, in abftratt, every fpecies of inherent turpitude that is to be found difperfed at large among the reft of the human creation, with fcarce a fingle virtue to extenuate this fhade of character, differing in this particular from all other men'; for, in other countries, the moft abandoned villain we ever heard of has rarely, if ever, been known anportioned with fome one good quality at leaft, in his compofition. It is aftonifhing, that, although they have been acquainted with Europeans, and their manufactures, for fo many hundred years, they have, in all this feries of time, manifefted fo little tafte for auts, or a

\section*{BOOKIII. CHAP. I.}
genius either inventive or imitative. Among fo great a number of provinces on this extenfive continent, and among fo many millions of people, we have heard but of one or two infignificant tribes, who comprehend any thing of mechanic arts, or manufacture ; and even thefe, for the moft part, are faid to perform their work in a very bungling and flovenly manner, perhaps, not better than an oranoutang might, with a little pains, be brought to do.

The Chinefe, the Mexicans, the Northern Indians, are all celcbrated, fome for their expert imitation of any pattern laid before them; others for their faculty of invention; and the reft for the ingenuity of their feveral fabrics. There was not a tribe of thefe Indians, from the Mexican to the Caribbean, that was not found to poffefs many amiable endowments. In the hotteft region of South America the natives were effeminate, lefs robuft and courageous than the Northern inhabitants; but none of them addicted to the brutal practices common to the Negroes, lying under the fame parallei of climate ; on the contrary, thefe Indians are reprefented as a docile, inoffenfive, fagacious, and ingenious people. The Northern Indians, we know, have, ever fince they came to the knowledge of Europeans, difplayed an elevation of foul, which would do honour to the moft civilized nations. It muft be agreed, (fays Charlevoix) that the nearer we view them, the more good qualities we difcover in them; moft of the principles, which feem to regulate their conduct, the general maxims by which they govern themfelves, and the effential part of their character, difclofe nothing of the barbarian.

The Negroes feem to conform neareft in character to the Egyptians, in whofe government, fays the learned Goguet, there reigned a multitude of abufes, and effential defects, authorized by the laws, and by their fundamental principles. As to their cuftoms and manners, indecency and debauchery were carried to the moft extra ragant height, in all their public feafts, and religious ceremonies; neither was their morality pure. It offended againit the firft sules of rectitude and probity ; they lay under the higheft cenfure for covetoufnefs, perfidy, cunning, and roguery. They were a people without tafte, without genius, or difcernment; who had only ideas of grandeur, ill underftood: knavifh, crafty, foft, lazy, cowardly, and fervile, fuperfitious in excefs, and extravagantly befotted with an abfurd and monftrous
theology; without any fkill in eloquence, poetry, mufic, architecture, fculpture, or painting, navigation, commerce, or the art military. Their intellect rifing to but a very confufed notion, and imperfect idea, of the general objects of human knowledge. But he allows, that they invented fome arts, and fome fciences; that they had fome little knowledge of aftronomy, geography, and the mathematics; that they bad fome few good civil laws and political conftitutions; were induftrious enough adepts in judicial aftrology; though their 1kill in fculpture, and architecture, rofe not above a flat mediocrity. In thefe acquifitions, however imperfect, they appear far fuperior to the Negroes, who, perhaps, in their turn, as far tranfcend the Ægyptians in the fuperlative perfection of their worft qualities.

When we reflect on the nature of thefe men, and their diffimilarity to the reft of mankind, muft we not conclude, that they are a different fpecies of the fame genus? Of other animals, it is well known, there are many kinds, each kind having its proper fpecies fubordinate thereto ; and why fhall we infift, that man alone, of all other animals, is undiverfified in the fame manner, when we find fo many irrefiftible proofs which denote his conformity to the general fyftem of the world? In this fyftem we perceive a regular order and gradation, from inanimate to animated matter; and certain links, which connect the feveral genera one with another; and, under thefe genera, we find another gradation of fecies, comprehending a valt variety, and, in fome claffes, widely differing from each other in certain qualities. We afcend from mere inert matter into the animal and vegetable kingdoms, by an almoft imperceptible deviation; and thefe two are again nearly connected by a very palpable fimilitude; fo that, where the one ends, the other feems to begin. When we proceed to divide and fubdivide the various claffes of animals, we perceive the fame exact fubordination and clofe affinity between the two extremes combining all together in a wonderful and beautiful harmony, the refult of infinite wifdom and contrivance. If, amidt the immenfe variety of all animate beings which people the univerfe, fome animal, for example, the body of a man, be felected to ferve as a criterion, with which all the other organized beings are to be compared ; it will be found, that, although all there beings exift abftractedly, and all vary by differences infinitely graduated, yet, at the fame time, there appears a primitive and general defign, or model, that

\section*{B O OK III. CHAP. I.}
may be very plainly traced, and of which the degradations are much flower than thofe of fhape, figure, and other external appearances. For, befides the organs of digeftion, circulation, and generation, belonging to all animals, and without which the animal muft ceafe to be an animal, as it could neither fubfift, nor propagate its fecies; there is, even in the parts which principally contribute to the varicty of exterior forms, a prodigious refemblance, which neceffarily reminds us of an original model, after which every thing feems to have been worked. The body of a horfe, for inftance, which, at firft fight, feems fo different from that of a man, when properly compared part by part, inftead of furprizing us by the difference, fills us with aftonifhment at the fingular and almoft complete refemblance we find between them; for, take the fkeleton of a man, incline the bones of the pelvis, chorten the bones of the thighs, legs, and arms, lengthen thofe of the feet and hands, connect the phalanges, extend the jaws, Shorten the frontal bone, and, laftly, lengthen the fpine; this fkeleton, inftead of refembling any longer the remains of a man, will be the 1keleton of a horfe. It may be eafily fuppofed, that, by lengthening the fyine and the jaws, the number of the vertebra, the ribs and teeth are increafed at the fame time; and it is only in the number of thefe bones, which may be confidered as neceffary, and the protracting, fhortening, or junction of the others, that the fkeleton of the body of this animal differs from that of the human body. But, to carry thefe refemblances fill further, let us feparately confider fome parts effential to the figure ; the ribs, for inftance, which will be found in man, in all the quadrupeds, in birds, fifhes, and even the veftiges of them, may be traced to the very tortoife, where a delineation of them plainly appears in the futures under the fhell. Let it alfo be confidered, that the foot of a horfe, though in appearance fo different from the hand of a man, is yet compofed of fimilar bones; and that, at the extremity of each of our fingers, there is the fame horfe-fhoe thaped little bone, which terminates the foot of that animal ; let it then be decided, whether this latent refemblance be not more aftonifhing than the vifible differences; whether this conftant conformity, and continuing model, followed from man to quadrupeds; from quadrupeds to the cetaceous fpecies; from them to birds; from birds to reptiles; from reptiles to fifh, \(E^{\circ} \mathrm{c}\). in which are always found the effential parts, as the heart,
inteftines, the fyine, the fenfes, \(\mho c\). do not feem to indicate, that the Supreme Being, at the creation of animals, intended to make ure of one model ; varying it, at the fame time, in every poffible manner, that man might equally admire the fimplicity of the plan, and the magnificence of the execution \([b]\).
When we come to examine the exterior figures of any particular clafs of animals, we find them marked with a moft remarkable variety. To inftarce, for example, the dog kind, who have fume of them fo near an affinity to the wolf and fox ; there is more difference between the mafiff and lap-dog, than between the horfe and the afs; and what two animals can be more unlike, than the litte black Guiney dog, of a fmooth fkin, without a fingle hair upon it, and the rough fhock dog? From thefe let us pafs on to the monkey-kind, or antbropomorphits, fo called by naturalifts, becaufe they partake more or lefs of the human fhape and difpofition; we here obferve the palpable link which unites the human race with the quadruped, not in exterior form alone, but in the intellectual quality. The varicty of them is fo great, that a complete catalogue has never yet been made. Condamine, who traveled through the country of the Amazons, faw fo many, that he affirms, it would take up fome length of time to write our a lif of their names. As far however as they are yet deferibed, we trace them from the cynocephalus, which moft refembles quadrupeds in the thape of its head, througin a variety of tlie ape kind, which have tails and pouches, to thofe which have forter tails, and fomewhat more of the human vifage; to thofe which have no tails, who have a callous breech, whofe feet ferve occafionally for hands, which conflitute them of the order of quadrumains, or four-handed animals, and who more commonly move on all-four than erect, to the ceppus, or gibbon, of Buffon; from thefe we come to the oran-outang ipecies, who have fome trivial refemblance to the ape-kind, but the ftrongeft fimilitude to mankind, in countenance, figure, fature, organs, erect pofture, actions or movements, food, temper, and manner of living.
The few which have been brought into Europs, being extremely young, were, from a popular error, denominated pigmies; for it is affrmed on every authority, that they grow to the ordinary fize of [b] Buffon.
man. Mr. Buffon, who has examirred this curious fubject with great attention, defcribes them this; "The oran-outang has no pouch, tail, nor callofity, on his hind parts; thefe parts, and the calves of his legs, are plump and flefhy, differing intirely from the ape and monkey. All his teeth are the fame as the human, his face is broad, naked, and tawney, his ears, hands; feet, breaft, and belly, are likewife without hair, and of the fame tawney complexion; the hair of his head is like that of a man, and defcends in a forelock on each temple; the hair on his back and loins is thin, and in fmall quantity; he grows from five to \(\sqrt{2} x\) feet in height."

The nofe is flat, the breaft of the females furnifhed with two paps, and they are fubject to the periodical flux. The latter characteriftic, which is common alfo to the monkey-clafs, was not unobferved by the ancient Ægyptians, who drew a fingular advantage from it in their aftronomical regifters; for they kept the cynocephalus, and other monkies, in their temples, in order to know, with tolerable certainty, by this means; the periodical conjunctions of the fun and moon.

Lewis le Compte, in his Memoirs of China, afferts, that in the ftiaits of Molucca he fiw fome of four feet in height, that walked erect, and had faces fhaped like thofe of the Hottentots at the Cape. They made a noife like a young child; their paffions appeared with a lively expreffion in their countenances; they feemed to be of a tender difpofition, and would kifs and embrace thofe they were fond of. Doctor Tyfon, giving an account of a young male brought from Angola (afterwards diffected), obferves, that he poffeffed the like tendernefs of difpofition towards the failors on board fhip. He would not affociate with the monkies brought in the fane fhip, but fhunned their compmy. He ufed to put on his own cloaths; or, at leaft, rwhenever he found a difficulty in managing any part of his drefs, he would take it in his hand to fome of the company, fignifying (as it were) his defire that they fhould help him.

Mr: Noell fpeaks of apes, which he faw in Guincy, and calls barris (which Mr . Buffon takes to be a fynonym of the oran-outang), who walked erect, and had more gravity, and appearance of underftanding, than any other of the ape kind, and were paffionately fond of women.

\section*{J A M A I C A.}

Limmus, upon the authority of fome voyage-writers, affirms, that they converfe together in a kind of biffing dialect; that they poffets thought and reflexion, and believe the world was made for them, \&x. but Mr. Buffon, with good reafon, fufpects that Linnæus has confounded the albinoe with the oran-obtang.

The oran-outangs are faid to make a kind of huts, compofed of boughs interlaced, which ferve to guard them from the too great heat of the fun [c].

It is alfo averred, that they fometimes endeavour to furprize and carry off Negroe women into their woody retreats, in order to enjoy then.

Monficur la Broffe fays, he knew a Negrefs at Loangs in Guiney, who had refided three years with them; be afferts that they grow to the height of fix to feven feet, have vaft mufcular ftrength, and defend themfelves with fticks. He bought two young ones, a male of fourteen months, and a female of twelve. They fat at table, ate of every thing without diftinction, handled the knife and fork, and helped themfelves, drank wine, and other liquors; made themfelves underftood by the cabbin boy, when they wanted any thing, and, upon the boy's refufal to give them what they feemed to defire, they fhewed fymptoms of violent anger and difguft. The male falling fick, was twice blooded in the right arm, which relieved him; and afterwards, whenever he found himfelf indifpofed, he pointed to his arm, as if he knew what had done him good in his former illnefs. I muft own, this account contains fome particulars very extraordinary; for a child of the fame age, in England, would be regarded as wonderfully forward, if it fhould exhibit the like proofs of fagacity. But, if we allow to thefe oran-outangs a degree of intellect not reftricted wholly to inftinct, but approaching, like the frame of their organs, to an affinity with the human, we may effablifh the credibility of this relation, by fuppofing that like, the human inhabitants of Guiney, they arrive three or four years earlier at the age of puberty, or maturity, than the inhabitants of Northern climates: and confequently that their faculties, in general, bloffom and expand proportionably earlier.

\section*{BOOK III. CHAP. I.}

Mr. Groffe reports, that two young ones, fcarcely two feet high (probably under two years of age), which he prefented to the governor of Bombay, refembled mankind in all their actions. If they were gazed at when in bed, they covered with their hands thofe parts which modefty forbids to expofe. They appeared dejected under their captivity ; and the female dying on board fhip, her comrade exhibited every token of heart-felt affliction, rejected his food, and did not furvive her above two days.

Guat, feaking of a female which he faw at Java, fays, her fature was very large; that the refembled frongly fome Hottentot women he had feen at the Cape; that the made her own bed every day very properly, laid her head on the pillow, and covered herfelf with the quilt. When fhe had a pain in her head, fhe bound it with a handkerchief.-Several other particulars, he fays, might be enumerated, that were very fingular; but he fufpected that thefe animals are often biought, by a habit of inftruction, to do many of thofe feats, which the vulgar regard as natural ; this, however, he only gives as a matter of conjeaure.

Gemelli Careri afferts to have feen one that cried like an infant, and carried a mat in its arms, which it occafionally laid down and repofed upon. Thefe apes, fays he, feem to have more fenfe than fome among mankind; for, when they are unable to find any fruits in the mountains for their fubfiftence, they come down to the fea fhore, where they catch crabs, lobfters, and fuch like. A fpecies of oyfter, called taclore, frequently lie on the beach. The apes, on perceiving any of them gaping, chuck a flone between the fhells, which hinders them from clofing, and then proceed to devour them without any apprehenfion.

Francis Pyrard reports, he found the barris in the province of Sierra Leon, in Guiney that they are corpulent and mufcular, and fo docile, that, if properly inftructed while they are young, they become very good fervants.

Father Jarrie fpeaks of them in the fame terms; and the teftimony of Schoutten agrees with Pyrard on the fubject of the education of thefe amimals; he fays, they are taken with nets, that they walk erect, and can ufe their feet occafionally as hands, in parforming certain domeftic fervices, as rinfeing of glafles, prefenting them to drink, Vol.II.

A a a
turning
turning fits, and the like. Thefe and other examples are quoted by Mr. Buffon, who confiders thefe animals, fpoken of by voyagers under different appellations, to be only varieties of the oran-outang; and in this light he mentions the jocko, which he faw publickly fhewn at Paris. This animal always walked in an erect poiture ; his carriage was rather aukward, his air dejected, his pace grave, and movements fedate; he had nothing of the impatience, caprice, and mifchief of the baboon, nor extravagancies of the monkey; he was ever ready and quick of apprehenfion; a fign or a word was fufficient to make him do what the baboon and others would not without the compulfion of the cudgel or whip. He prefented his hand to re-conduct the perfons who came to vifit him, and ftalked with a flately gait before them. He fat at table, unfolded his napkin, wiped his lips, helped himfelf, and conveyed the victuals to his mouth with the fpoon and fork; poured the drink into a glafs, brought the tea-things to the table, put in the fugar, poured out the tea, let it ftand till it was cool enough for drinking, and all this with no other inftigation than a fign or word from his mafter, and often of his own free accord; he was of a courteous, tender difpofition ; he fpent the fummer at Paris, and died the following winter at London, of a cough and confumption. He ate of every food indifferently, except that he feemed to prefer confectionary, ripe and dried fruits, and drank wine in moderation.

This creature was about \(2 \frac{3}{2}\) feet tall, and, according to the tefiimony of the perfon who brought him to Europe, not above two years old; Mr. Buffon, therefore, imagines that at his full ftature he would have attained above five feet, fuppofing his growth proportioned to that of mankind.

The pigmy defcribed, and diffected, by Dr. Tyfon, was not more than two feet in height, and ftill younger, or under two years old, for his teeth and fome other offfications were not entirely formed.

The effential differences between the body of the oran-outang and that of a man, are reduced by Mr. Buffon to two, namely, the conformation of the os ilium, and that of the feet; the bone of the ilium is more clofe or contracted than in man. He has calves, and flefhy pofteriors, which indicate that he is deflined to walk ereet ; but his toes are very long, and the heel preffed with difficulty to the ground: he

\section*{BOOK III. CHAP.I.}
runs with more eafe than he can walk, and requires artificial heels, more elevated than thofe of fhoes in general, to enable him to walk without incovenience for any length of time. 'Thefe are the only parts in which he bears more refemblance to the ape kind than to man; but when he is compared with the ape, baboon, or monkey, he is found to have far more conformity to man than to thofe animals. The Indians are therefore excufable for affociating him with the human race, under the appellation of oran-outang, or wild man, fince he refembles man much more than he does the ape, or any other animal. All the parts of his head, limbs, and body, external and internal, are fo perfectly like the human, that we cannot (fays he) collate them together, without being amazed at a conformation fo parallel, and an organization fo exactly the fame, although not refulting to the fame effects. The tongue, for example, and all the organs of feech are the fame in both, and yet the oran-outang does not Jpeak; the brain is abfolutely the fame in texture, difpofition, and proportion, and yet be does not think; an evident proof this, that mere matter alone, though perfectly organized, cannot produce thought, nor fpeech, the index of thought, unlefs it be animated with a fuperior principle.

His imitation and mimickry of human geftures and movements, which come fo near in femblance to the refult of thought, fet him at a great difance from brute animals, and in a clofe affinity to man. If the effence of his nature confifts entirely in the form and organization of the body, he comes nearer to man than any other creature, and may be placed in the fecond clafs of animal beings.

If he is a creature fui generis, he fills up the face between mankind and the ape, as this and the monkey tribe fupply the interval that is between the oran-outang and quadrupeds.

When we compare the accounts of this race, fo far as they appear credible, and to be relied on, we muf, to form a candid judgement, be of opinion that Mr. Buffon has been rather too precipitate in fome of his conclufions.

We obferve that, in their native countries, they are not thoroughly known; they live fequeftered in leep woods, poifefs great ftrength and agility of body, with probably afficient cunning to guard againtt, as well as nimblenefs to elude, furprizes. 'The Negroes and Indians believe them to be favage men; it is no wonder that, for the moft part,
they are fearful of approaching the haunts of this race; and that from fome or other of thefe caufes, none have been obtained for infpection in Europe, except very young ones, who could not efcape their purfuers.

So far as they are hitherto difcovered to Europeans, it appears that they herd in a kind of fociety together, and build huts fuitable to their climate; that, when tamed and properly infiructed, they have been brought to pelform a variety of menial domeftic fervices; that they conceive a paffion for the Negroe women, and hence muft be fuppofed to covet their embraces from a natural impulfe of defire, fuch as inclines one animal towards another of the fame fpecies, or which has a conformity in the organs of generation.

The young ones exhibited in Europe have fhewn a quicknefs of apprehenfion, and facility of imitation, that we fhould admire very much in children of the fame tender age.

The conformation of their limbs denotes beyond all controverfy, that they are deftined to an erect pofition of body, and to move like men. The ftructure of their teeth, their organs of fecretion, digeftion, Exc. all the fame as the human, prove them entitled to fublift on the fame aliments as man. The organs of generation being alike, they propagate their fecies, and their females fuckle their young, in the fame manner.

Their difpofition fhews a great degree of focial feeling; they feem to have a fenfe of fhame, and a fhare of fenfibility, as may be inferred from the preceding relations; nay, fome trace of reafon appears in that young one, which (according to Le Broffe) made figns expreffive of his idea that "bleeding in the arm had been remedial to " his diforder." Nor muft we omit the expreffion of their grief by fhedding tears, and other paffions, by modes entirely refembling the human. Ludicrous as the opinion may feem, I do not think that an oran-outang hufband would be any difhonour to an Hottentot female; for what are thefe Hottentots ? - They are, fay the moft credible writers, a people certainly very ftupid, and very brutal. In many refpecis they are more like beafts than men; their complexion is dark, they are thort and thick-fet; their nofes flat, like thofe of a Dutch dog; their lips very thick and big; their teeth exceedingly white, but very long, and inl fet, fome of them ficking cut of their mouths like boars tufks;
tufks; their hair black, and curled like wool; they are very nimble, and run with a fpeed that is almof incredible; they are very difagreeable in their perfons, and; in fhort, taking all things together, one of the meaneft nations on the face of the earth \([d]\).

Has the Hottentot, from this portrait, a more manly figure than the oran-outang? I fufpect that he owes, like the oran-outang, the celerity of his fpeed to the particular conformation of his foot; this, by the way, is only my conjecture, for he has not as yet undergone anatomical inveftigation. That the oran-outang and fome races of black men are very nearly allied, is, I think, more than probable; Mr. Buffon fupports his deductions, tending to the contrary, by no decifive proofs.

We can fcarcely fpeak more of the oran-ontang race than we might of any newly difcovered people, the meafure of whofe faculties we have not yet had fufficient opportunity to examine.

We have feen their bodies hitherto in miniature only, which conveys very little further information of their intellect than might be gained from the view of a picture, or a ftatue.

But, if we reafon about them from analogy, they poffefs all thofe organizations which indicate, according to Le Pluche \([e]\), the pre-eminence of man over brutes, and thew him born to govern them.

Thefe tokens of fuperiority are, ift, The advantages received from the erect pofition of his head and body. All the brute fpecies recline towards the earth, and creep upon it. Man alone walks with his head upright, and by this attitude maintains himfelf in full liberty of action, and command. 2d, The expreffion in his countenance, from the multitude of mufcles which are diffributed through the extent of his face. 3 d, The liberty of governing all, and varying his actions according to the exigency of circomftances, is the firft help which man experiences from the nokle pofition of his body. 4 th, But the analogy of his flape, with the things around him, is a new fource of eafy methods to him in making himflf mafler of all. What we have juft remarked of the whole frame of the body of man, and of the exact proportion between his thape and that univerfal fway which is alloted him, we may again obferve in his legs and arms. \(5^{\text {th }}\), His legs fupport him with an air of dignity, that fets him off, and be-

\footnotetext{
[d] Commokore Roggewein's voyage.
[ 6\(]\) Spectacle de la Nature.
}

Speaks
fpeaks him a mafter: by a particular form, and by mufiles peculiar to them, they perform a multitude of actions, and fituations, adapted to the feveral exigencies of his government, but ufelefs and denied to his flaves, the inferior animals; his legs grow lefs and lefs towards the ground, where they terminate in a bafis flattened on purpofe to furtain the body, by giving it a noble and firm attitude, without clogging the freedom of its motions by the largenefs of bulk. 6th, The imufcles and nerves, which produce fo many fretchings, retractions, jerks, llidings, turnings, and operations of all kinds, have been all collected into one bundle, neatly rounded behind the fhin-bone; this mafs becomes a commodious pillow, fit to lay and reft the tender bones upon, fo very neceffary, and fo brittle. I pafs by a great many other marks of precaution, thefe inftruments are evidently fuil of; but I muft not omit obferving, that the two columns of the bodyalways afcend thicker and thicker, not only to lay the body upon a proportionable prop, but alfo that it may lie foft, when it wants to eafe itfelf of its fatigues. 7 th, The arm and hand together contribute fill more to the exercife of the authority of man. Since man has an arm, I fay, he is mafter of every thing on earth ; this muft naturally follow; that being truly the token and infrument of a moft effectual fovereignty. The arm of man being an univerfal inftrument, his operations and government extend as far as nature itfelf. By ftiffening, it performs the functions of a lever, or bar. When bent in the feveral articulations which divide it, it imitates the flail, the bow, and any other kind of fpring. By doubling the fift, that terminates it, it frikes like a mallet. When it rounds the cavity of the hard, it holds liquids like a cup, and tranfports them as a fpoon would do. By bending or joining its fingers clofe to each other, it makes hooks, nippers, and pincers of them. The two arms, fretched out, imitate the balance; and, when one of them is fhortened, to fupport fome great burthen, the other, extended out immediately on the oppofite fide, conftitutes an equilibrium. But it is extenuatiag the merits of the arm and hand, to compare them with our ordinary inftruments. In truth, the arm is both the model and the foul as it were, of all inftruments whatfoever; it is the foul of them, as the excellence of their effeets does always proceed from the hand and arm that direet them; fince they are all fo many imitations, or extenfions, of its different proper-
ties.
ties. 8th, One may know the defination, and general power, of man, in the fame manner as we know the peculiar deffination of the eye, arm, or leg; the proportion of thefe infruments, with certain effects, points out to us the intention of the Creator. 9 th, One might be apt to think, that his ftomach confounds him with the other animals, fince they all have a ftomach, and digeft as well as he does; yet his very ftomach ferves to evidence his general dominion. The cormorant, the diver, and the hern, have a fomach fitted to digeft the flefh of a fifh. They are never feen obferving, as the dove does, the departure of the ploughman, who has been juft fowing his ground. The lion and tiger have a flomach fit to digeft the fleth of terreftrial animals; you would in vain tie them up to the rack or manger, and reduce them to a few oats, or the grafs of your meadows. The horfe overlooks the hen, that turns up the ftraw he treads upon. The beafts of burthen, who exhauft their ftrength in our fervice, are no lefs valuable on account of the cheapnefs of their food; and in vain fhould we attempt to reward their labour, by offering them meats of the moft exquifite taite, from which they would turn away with loathing. Thefe animals are then, from the very difpofition of their ftomach, tied down to a certain kind of food; but man alone is unreftrained; and, as he has on his tongue the difcemment of all the favours that are diffributed among other animals, le has likewife in his ftomach the faculty of digefting whatever is whoefome and nourifhing. God has given him hands, that he might lay lold of, and fafion, whatever can nourifh, cure, and defend him; and a ftomach capable of digefting the foods tried by his palate. But the fomach of man is not the principal part of his body; that feerns by its functions to have a nearer affinity with that of animals, at he fame time that it has a degree of excellence that raijes it much above them. It is the fame with his otber organs. 1oth, The lips are he ramparts of the gums ; the latter are the fence of the tongue, anc of the roof of the mouth. They are a couple of true bulwarks, not inly forming an inclofure round the tongue, but alfo ferving as a b fis to the two rows of teeth. Thefe inflruments, chitfly appointed bs grind and diffolve, are a bony fubftance, perfectly hard, and covered vith enamel, which embellifhes the mouth by its whitenefs, and prferves, by its firmneis, thofe precious tools from the friction of mafy foods, and the infinuation
of penetrating liquors. The incifory teeth fill the fore-part; they are thin at the edge, like a wedge, and charp as knives. The conine are rounded, longer than the reft, and ending in a point. All the
reft have they are fet within the, that grows wider and wider, the further From the variety of their feve thefe are the molares, or grinders. in abftract all the powers of cutting, opations, thefe teeth comprehend are partially difperfed among other animals; they accommodate every fecies of vegetable as well as animal food; and, together the ftomach, fhew, that man was formed to derive his fuf with from both or either of thefe alimentary claffes, at his pleafure wonders of man's organization are multiplied through every. The his body, infomuch that anatifs confefs, that to any ftrict enquirer, an abyfs, which fwallows up both oure is, and reafon. IIth, The human voice, merely as a voice, is not traordinary, fince other animals have a voice as well as man. But fpeech puts an immenfe diftance between man and the animals. The merit of fpeech does not confift in noife, but in the variety of its inflections and univerfality of fignification. Man can exprefs his thoughts very varioufly. If making one's felf underftood is the fame as feeaking, we may of courfe feak with the foot, the eye, or the hand. A man, who feems tranfported with joy, or overwhelmed with grief, has already told us many things before he opens his mouth. His eyes, his features, his geftures, his whole coutenance, correfpond with his mind, and make it very well underfood. He fpeaks from bead to foot: all his motions are fignificant, and his expreffions are as infinite as his thought. But his voice takes place of thefe figns whenever he pleafes, and is not only equivalent to hem, but even fufficient alone to explain diftinctly what they cannotexprefs when combined together. Speech was fuperaded to all thefe fgns, that man fhould not want any means of explaining himfelf clearly In every thing, man alone unites the prerogatives that have been ganted but fingly to any particular fpecies, and his dignity arifes fom the right ufe to which his reafon enables him to apply his corporel powers and fenfes.

If then, the pre-eminence of man over the brute creation be difplayed in the ftructure of his body, ard the feveral infignia which the ingenious author has enumerated, iffollows of courfe, that the oran-outang
poffeffing the fame ftructure and organization, is alfo deftined to the like precedence and authority. The fole diftinction between him and man, muft confift in the meafure of intellectual faculties; thofe faculties which the moft fkilful anatomift is incapable of tracing the fource of, and which exift independent of the fructure of the brain; thefe powers are rendered vifible only in the refult they produce, through the intervention of the bodily organs. Hence it is certain, that the oran-outang, though endued with brains and organs of a ftructure not to be diftinguifhed from thofe of man by the ableft anatomifts, fill remains very far inferior to our idea of a perfect human being, unlefs he alfo is endowed with the faculties of reafon and perception, adapted to direct him in the application of that mechanifm to the fame ufes as we find it applied in a rational man. According to Mr. Buffon, he has eyes, but fees not; ears has he, but hears not; he has a tongue, and the human organs of fpeech, but Jpeaks not; he has the human brain, but does not think; forms no comparifons, draws no conclufions, makes no reflections, and is determined, like brute animals, by a pofitive limited inftinct. But in truth, we know not the meafure of their intellect, nor can form a competent judgement of it from one or two young animals, that were fhewn for a few months in France and England. Dogs, and fome other brutes, have been made, by dint of blows, rewards, and conftant exercife, to vary their motions in a very furprifing manner, according to the defires and fignals of their teachers; but in thefe cafes, the actual ikill has been fuppofed to refide in the teacher, and that no juft argument can be drawn from hence to prove any particular dexterity in them, much lefs any defign of theirs, or degree of perfection acquired by reafoning: the monkey tribe indeed form fome exception, who, even in their wild ftate, fhew a voluntary delight and readinefs in mimicking human actions, of which there are an infinite multitude of well-attefted proofs. When we come to view the ftructure of the oran-outang, we are forced to acknowledge, that his actions and movements would not be natural, unlefs they refembled thofe of man. To find him therefore excelling the brute animals in the dexterity of his manœuvres, and aptnefs of his imitations, does not excite our admiration, fo much as the readinefs of apprehenfion, with which, in his ftate of impuberty or childhood (if I may fo exprefs myfelf), his performances before fuch a variety of fpectators were ufually Vol. II. Bbb accompanied.
accompanied. How far an oran-outang might be brought to give utterance to thofe European words (the fignification of whofe founds, it is plain from Buffon, and others, he has capacity to underftand, fo as to conform his demeanour and movements to them voluntarily at the immature period of life, when his mental faculties are in their weakeft ftate), remains for experiment. If the trial were to be impartially made, he ought to pafs regularly from his horn-book, through the regular fteps of pupilage, to the fchool, and univerfity, till the ufual modes of culture are exhaufted upon him. If he fhould be trained up in this manner from childhood (or that early part of exiltence in which alone he has been noticed by the learned in Europe), to the age of 20 or 25 , under fit preceptors, it might then with certainty be determined, whether his tongue is incapable of arliculating human languages. But if, in that advanced age, and after a regular procefs of education, he fhould ftill be found to labour under this impediment, the phænomenon would be truly aftonifhing; for if it be alledged, that he could not produce fuch founds for want of the fentient or thinking principle to excite the organs of feech to fuch an effeet, ftill we fhould expect him capable of uttering founds refembling the human, juft as well as a natural idiot, or a parrot, can produce them without the agency of thought. For my own part, I conceive that probability favours the opinion, that human organs were not given him for nothing: that this race have fome language by which their meaning is communicated; whether it refembles the gabbling of turkies like that of the Hottentots, or the hiffing of ferpents, is of very little confequence, fo long as it is intelligible among themfelves: nor, for what hitherto appears, do they feem at all inferior in the intellectual faculties to many of the Negroe race; with fome of whom, it is credible that they have the moft intimate connexion and confanguinity. The amorous intercourfe between them may be frequent; the Negroes themfelves bear teftimony that fuch intercourfes actually happen; and it is certain, that both races agree perfectly well in lafcivioufnefs of difpofition \([f]\).

\footnotetext{
[f] An ingenious modern author has fuggefted many frong reafons to prove, that the faculty of fpeech is nont the gift of nature to man; that articulation is the work of art, or at leaft of a habit acquited by cuftom and exercife; and that mankind are truly in their natural fate a mutum pecus. He inflances the safe of Peter the wild youth, caught in the forefts of Hanover, who (he tells us) was
}

But if we admit with Mr. Buffon, that with all this analogy of organization, the oran-outang's brain is a fenfelefs icon of the human; that it is meer matter, unanimated with a thinking principle, in any, or at leaft in a very minute and imperfect degree, we muft then infer the ftrongeft conclufion to eftablifh our belief of a natural diverfity of the human intellect, in general, aborigine; an oran-outang, in this cafe, is a human being, quoad his form and organs; but of an inferior fpecies, quoad his intellect ; he has in form a much nearer refemblance to the Negroe race, than the latter bear to white men; the fuppofition then is well founded, that the brain, and intellectual organs, fo far as they are dependent upon meer matter, though fimilar in texture and modification to thofe of other men, may in fome of the Negroe race be fo conftituted, as not to refult to the fame effects; for we cannot but allow, that the Deity might, if it was his pleafure, diverfify his works in this manner, and either withhold the fuperior principle entirely, or in part only, or infufe it into the different claffes and races of human creatures, in fuch portions, as to form the fame gradual climax towards perfection in this human fyftem, which is fo evidently defigned in every other.

If fuch has been the intention of the Almighty, we are then perhaps to regard the oran-outang as,

> " - the lag of human kind,
" Neareft to brutes, by God defign'd [g]."
The Negroe race (confifting of varieties) will then appear rifing pro* greffively in the fcale of intellect, the further they mount above the oran-outang and brute creation. The fyftem of man will feem more confiftent, and the meafure of it more compleat, and analagous to the harmony and order that are vifible in every other line of the world's ftupendous fabric. Nor is this conclufion degrading to human nature, while it tends to exalt our idea of the infinite perfections of the Deity;
a man in mind as well as body, yet was not only mute when firft caught, but continued fo for 30 years after, having never learned to fpeak, notwithtanding his conftant intercourfe with mankind during that fpace. This would feem to prove, that the want of articulation, or exprefling ideas by fpeech, does not afford a pofitive indication of a want of intellect: fince the difficulty arifing from the mechanifm of fpeech, or pronunciation, may to fome organs be infurmountable. Singular examples of this kind may happen, but they are rare. To find a whole fociety of people labouring under the fame impediment, would be really wonderful.
[ g\(]\) Prior.

\section*{J A M A I C A.}
for how vaft is the diffance between inert matter, and matter endued with thought and reafon! The feries and progreffion from a lump of dirt to a perfect human being is amazingly extenfive; nor lefs fo, perhaps, the interval between the latter and the moft perfect angelic being, and between this being and the Deity himfelf. Let us fhake off thofe clouds with which prejudice endeavours to invelope the underftanding ; and, exerting that freedom of thought which the Beft of Beings has granted to us, let us take a noon-tide view of the human genus; and fhall we fay, that it is totally different from, and lefs perfect than, every other fyftem of animal beings? The fpecies of every other genus have their certain mark and diftinction, their varieties, and fubordinate claffes: and why fhould the race of mankind be fingularly indifcriminate?
" - In the catalogue they go for men, "As hounds and greyhounds, mongrels, fpaniels, curs,

"Particular addition, from the bill
"That writes them all alike;-And fo of men -" fays that faithful obferver of nature, our immortal Shakefpear; and with him fo far agrees that truly learned and fagacious naturalift Monf. Buffon, who inveftigates the marks of variation among mankind in the following manner: "Men differ from white to black, from compound to fimple, by the height of ftature, fize, activity, ftrength, and other bodily characterifics; and from the genius to the dalt, from the greateft to the leaft, by the meafure of intellect." That there are fome phyfical diftinctions, in refpect of perfon, I think, requires no further demonfration; and that men vary ftill more in intellect, is almoft equally evident. On our entering Africa towards the European confine on the North, we firft meet with the Moors, a race of tawny men, who poffefs many vices, and fome virtues; they are acute, induftrious, and carry on trade and manufactures ; next to thefe, are a mixture of Moors and Arabs: we then arrive at the gum coaft, or country of

\section*{BOOK III. CHAP. I.}

Senaga, whofe inhabitants are an intermixture of blacks and the two former [ \(b\) ]. Next to thefe lie the Jaloffs, Phulis, and Mandingo Blacks; the former of whom are the moft humanized and induftrious of any on the coalt; yet they are varioufly defcribed by travelers, fome commending them for amiable qualities, others accufing them of the worft; fo that, to judge impartially, we are to fuppofe that they poffefs both, and differ only from each other in degree; but the Mandingoes are reprefented as little better than their Southern neighbours on whom they border. From hence we proceed through the different diftricts called the grain, ivory, gold, and flave coaft, to Angola; all thefe we find occupied by petty Negroe ftates, whofe character is nearly uniform, and who fcarcely deferve to be ranked with the human fpecies. The kingdoms of Angola and Benguela, having been chiefly peopled by the Giagas an interior nation, the inhabitants are faid to be favages in a fhape barely human. The Giagas were a tribe that poured out of the inland parts, ravaged and plundered almoft every country bordering on the coaft, deluging them like the Goths and Vandals of Europe, and intermixing with moft of the conquered ftates, particularly Angola and Benguela. They are defcribed as a batbarous race, hardened in idolatry, wallowers in human blood, cannibals, drunkards, practifed in lewdnefs, oppreffion, and fraud; proud and flothful, curfed with all the vices that can degrade human nature, poffeffing no one good quality, and in fhort more brutal and favage than the wild beafts of the foreft. From thefe, the Angolans borrowed their horrid cuftom of butchering a vaft number of human victims, at the obfequies of their kings and relations, as well as that of feafting upon human flefh, and preferring it to any other; infomuch, that a dead flave was of more value at their market than a living one: the former practice indeed obtained in almoft if not all the other provinces on the coaft, and has only been difcontinued by the greater advantage that offered, of felling their flaves and captives to the Euro-

\footnotetext{
[b] The Moors inhabiting on one fide of the Senaga are wanderers, remoring from place to place, as they find pafturage for their cattle. The Jaloff and Phulis Negrnes, fettled on the other fide of the fame river, live in villages. The Moors have fuperiors, or chiefs, of their own free election; the Negroes are in fubjection to their kings, who are vefled with a very arbitrary power. The Moors are fmall, lean, and ill looked, but have a lively, acute genius; the Negroes are large, fat, and well-proportioned, but filly, and of a flender capacity. The country inhabited by the Moors is a barren defart, almoft deftitute of verdure; that of the Negroes is a fertile foil, abounding with pafturage, producing grain, and trees of feveral kinds. Le Maire,
}

\section*{J A M A I C A.}
pean traders, inftead of putting them to death. After leaving Benguela we arrive among the Hottentots, whofe women are fo remarkable for a natural callous excrefcence, or flap, which diftinguifhes them from all others of the fame fex in the known world. Thefe people are of a dark nut, or dingy olive complexion, and in all other refpects, fave what have been noticed, are like the other Negroes in perfon. They are a lazy, ftupid race; but poffefs benevolence, liberality, integrity, and friendfhip; they are hofpitable and chafte, have fome appearance of a regular form of government among them, and the barbarities they practife are more the refult of antient cuftoms, whofe fource is now unknown, than any innate cruelty of their difpofitions. Thefe people have feveral mechanic arts among them; but their language is guttural, and inarticulate, compared by fome to the gabbling of enraged turkey-cocks, and by others to the rumbling of wind a pofferiori. As we approach towards Abyffinia, the North Eaft confine of Negro-land, we find the Blacks well fhaped and featured, and for the moft part having lank black hair inftead of wool, though not very long. The Abyffinians are reprefented to be of a brown olive complexion, tall, of regular and well-proportioned features, large fparkling black eyes, elevated nofes, fmall lips, and beautiful teeth; the character of their minds is equally favourable; they are fober, temperate, fenfible, pious, and inoffenfive.

The Red Sea divides thefe people from the Arabs, who, in complexion, perfon, and intellect, come ftill nearer to the Whites or Perfians, their next neighbours, whofe valour, quick parts, and humanity, are juftly celebrated.

Having now compleated this tour, we are ftruck with one very pertinent remark; the natives of the whole tract, comprifed under the name of Negro-land, are all black, and have wool inftead of hair; whereas the people in the moft torrid regions of Libya and America, who have the fun vertical over them, have neither the fame tincture of fkin, nor woolly covering. As we recede from Negro-land, this blacknefs gradually decreafes, and the wool as gradually changes to lank hair, which at firft is of a fhort ftaple, but is found longer, the further we advance [i]. We obferve the like gradations of the intellectual
[i] I admit there is fome variety both in colour and feature among the different nations of the Negroes; fome are lighter than others by a fhade or two, and fome have fmaller features; but this
lectual faculty, from the firft rudiments perceived in the monkey kind, to the more advanced ftages of it in apes, in the oran-outang, that type of man, and the Guiney Negroe; and afcending from the varieties of this clafs to the lighter cafts, until we mark its utmoft limit of perfection in the pure White. Let us not then doubt, but that every member of the creation is wifely fitted and adapted to the certain ufes, and confined within the certain bounds, to which it was ordained by the Divine Fabricator. The meafure of the feveral orders and varieties of thefe Blacks may be as compleat as that of any other race of mortals; filling up that fpace, or degree, beyond which they are not deftined to pafs; and difcriminating them from the reft of men, not in kind, but in Jpecies.

The examples which have been given of Negroes born and trained up in other climates, detract not from that general idea of narrow, humble intellect, which we affix to the inhabitants of Gainey. We have feen learned borfes, learned and even talking dogs, in England; who, by dint of much pains and tuition, were brought to exhibit the figns of a capacity far exceeding what is ordinarily allowed to be poffeffed by thofe animals. The experiment has not been fully tried with the oran-outangs; yet, from what has hitherto been proved, this race of beings may, for aught we know to the contrary, poflefs a mare of intellect, which, by due cultivation, diverfity only ferves to ftrengthen my argument; there is likewife a variety in the colour of their wool, for I have feen fome perfectly reddifh.
The natives of the Indian peninfila, betwixt the rivers Indus and Ganges in the Eaft Indics, have the African black complexion, the European features, and the American lank hair, but all native and genuine.
It is not a variety of climate that produces various complexions. America lies from 65 degrees North lat. to 55 deg . South lat. comprehending all the various climates of Europe, Afia, Africa, and America. The American complexion is every where permanently the fame, only with more or lefs of a metalline luffre. Between the Tropics, and in the high Northern latitudes, they are paler; in the other parts, of a copper colour, have thin lips, jet black lank hair, and no beards; in the high Northern and Southern latitudes, they are tall and robuft; between the Tropics they are fhort and fquat. Douglas. - The greatel alteration caufed by difference of climate feems to confift in enlarging or depreffing the ffature; relaxing or contracting the mufcles, and articulations of the limbs; lengthening or fhortening the bones; and, in confequence perhaps, raifing or depreffing, in a fmall degree, fome particular features. The natives of Madagafcar have neither fuch flat nofes nor dark complexions as the Guiney Negroes; there are fome of them faid to be mere bruncts; and moft of them have long hair : they are by moft travelers pronounced to be lively, intelligent, fenfible of gratitude, and poffeffed of many amiable qualities; fo that it is not without regret, that we find them treated as the moft abject flawes by the French, of their fetlements in Mauritius.
might raife them to a nearer apparent equality with the human, and make them even excel the inhabitants of 2waqua, Angola, and Whidab. Mr. Hume prefumes, from his obfervations upon the pative Africans, to conclude, that they are inferior to the reft of the fpecies, and utterly incapabie of all the higher attainments of the human mind. Mr. Beattie, upon the principle of philanthropy, combats this opinion; but he is unfortunate in producing no demonftration to prove, that it is either lightly taken up, or inconfiftent with experience. He likewife makes no feruple to confound the Negroes and Mexican Indians together, and to deduce conclufions from the ingenuity of the latter, to thew the probable ingenuity of the former. We might reafonably fuppofe, that the commerce maintained with the Europeans for above two centuries, and the great variety of fabrics and things manufactured, which have been introduced among the Guiney Negroes for fuch a length of time, might have wrought fome effect towards polihhing their manners, and exciting in them at leaft a degree of imitative induftry; but it is really altoniking to find, that thefe caufes have not operated to their civilization; they are at this day, if any credit can be given to the moft modern accounts, but little divefed of their primitive brutality; we cannot pronounce them infufceptible of civilization, fince even \([k]\) apes have been taught to eat, drink, repofe, and drefs, like men; but of all the human fpecies hitherto difcovered, their natural bafenefs of mind feems to afford leaft hope
\([k]\) The docility of many among the brute creation, is a fubject which the pride of man is not very fond of examining with a too critical inveftigation; but none is more curious; the enquiry is humiliating to thofe who would fondly confider man as poffeffing fomething of an angelic nature; they think it degrades them to allow brutes a reafoning faculty; yet there are not wanting proofs of fomewhat very like it, efpecially in thofe animals with whom we are moft converfant, and therefore have more frequent opportunities of fudying. Pope, more free in his opininn, calls the elephant "half-reafoning;" the relations that are given of the fenfibility of this animal appear to many perfons almoft incredible.
Mr. Torren affirms, that, when he was at Surat in 1751, he had an opportunity of remarking one, whofe mafter had let it out to hire for a certain fum per day. Its employment was, to carry umber for building, out of the river; which bufinefs it difpatched very dextrounly under the command of 1 boy, and afterwards laid one piece upon another in fuch good order, that no man could have done it better.
The docility of monkeys and apes is Atll fuperior. One of the latter, trained in France, was not long fince exhibited in London. He performed a variety of equilibres on the wire with as much expertnefs as the moft noted human artifts that have appeared before the public in this walk.

> B O O K II. С Н A P. I.
of their being (except by miraculous interpofition of the divine Providence) fo far refined as to think, as well as act like perject mert.

It has been faid, that the nature of their governments is unfavourable to genius, becaufe they tolerate flavery; but genius is, manifefted in the right frame of government: they have republics among them as well as monarchies, but neither have yet been known productive of civility, of arts, or fciences. Their genius (if it can be fo called) confifts alone in trick and cunning, enabling them, like monkies and apes, to be thievifh and mifchievous, with a peculiar dexterity. They feem unable to combine ideas, or purfue a chain of reafoning; they have no mode of forming calculations, or of recording events to pofterity, or of communicating thoughts and obfervations by marks, characters, or delineation; or by that method fo common to moft other countries in their rude and primitive ages, by little poems or fongs: we find this practice exitted formerly among the Ægyptians, Phœnicians, Arabians, Mexicans, and many others. The ancient inhabitants of Brazil, Peru, Virginia, St. Domingo, and Canada, preferved, in poems of this kind, fuch events as they thought worthy of the knowledge of future times, and fung them at their public feftivals and folemnities. Arithmetick, aftronomy, geometry, and mechanicks, were, in other focieties of men, among the firft fciences to which they apflied themfelves. The origin of arts and fciences in other countries has leen afcribed to their uniting in focieties, inftead of leading a gregarious life; their neceffities, the inftitution of laws and government, and the leifure which thefe afforded for indulging in fuch refearches. It may be faid, that the Negroes are not affected by this neceffity which has affected other people; that their foil is wonderfully productive; that their country abounds with food; that the warmth of their climate makes cloathing fuperfluous; but no fuch pretences refrained the South Americans, and others living under the fame parallel of climate, from cloathing themfelves.

The art of making garments was invented in the mildeft climates, where there was the leatt need of any covering for the body; necellity alone therefore could not be the caufe of mens cloathing themfelves.

The Negroes live in focieties; fome of their towns (as they are called) are even faid to be very extenfive; and if a life of idlenefs

Vol. II.

implies

\section*{J A M A I C A.}
implies leifure, they enjoy enough of it. In regard to their laws and government, thefe may, with them, be more properly ranged under the title of cuftoms and manners; they have no regulations dictated by forefight: they are the fimple refult of a revengeful felfinh fpirit, put in motion by the crimes that prevail among them; confequently their edicts are mofly vindictive, and death or flavery the almoft only modes of punifhment; they feem to have no polity, nor any comprehenfion of the ufe of civil inftitutions. Their punifhments are actuated either by a motive of revenge or of avarice; they have none to balance the allurements of pleafure, nor the flrength of the paffions, nor to operate as incitements to induftry and worthy actions. In many of their provinces they are often reduced to the utmoft Araights for want of corn, of which they might enjoy the greateft abundance, if they were but animated with the fmalleft portion of induftry. If no rules of civil polity exift among them, does it not betray an egregious want of common fenfe, that no fuch rules have been formed? If it be true, that in other countries mankind have cultivated fome arts, through the impulfe of the neceffities under which they laboured, what origin fhall we give to thofe contrivances and arts, which have fprung up after thofe neceffities were provided for? Thefe are furely no other than the refult of innate vigour and energy of the mind, inquifitive, inventive, and hurrying on with a divine enthuliafm to new attainments. The jurifprudence, the cuftoms and manners of the Negroes, feem perfectly fuited to the meafure of their narrow intellect. Laws have juftly been regarded as the mafter-piece of human genius: what then are we to think of thofe focieties of men, who either have none, or fuch only as are irrational and ridiculous?

\section*{Religion and Religious Opinions among the Negroes.}

They are faid to have as many religions almoft as they have deities, and thefe are innumerable; but fome have been taught to believe the exiftence of a fupreme God. Thefe fay that God is partial to the Whites, and treats them as his own children, but takes pleafure in afflicting the Blacks with a thoufand evils; that they are indebted to him for nothing but mowers, without which the earth would not afford them provifions; but even in this, they alledge
B O O K III. CHAP. I.
alledge he is only the undefigning caufe, and for the effect they are obliged to the fertility of the foil. Man's creation they affert to have happened in the following manner: in the beginning, black as well as white men were created; nay, if there was any difference in time, the Blacks had the priority. To thefe, two forts of favours were prefented; to the Blacks, gold; and to the Whites, the knowledge of arts and fciences. It was from choice, that the Blacks had gold for their fhare: and, to punifh their avarice, it was decreed they fhould ever be flaves to the white men; they are fully perfuaded that no country but Afric produces gold, and that Blacks can never attain the knowledge of letters [ m ].

The Mocas not only worfhip, but eat, fnakes; now adore, and prefently devour, their deity. In this however they are not unexampled by fome ftates in Europe; I mean thofe pious canibals, one effential part of whofe faith it is to believe, that they verily and fubftantially eat the flefh, and quaff the blood, of their God.

The fnake is likewife a favourite divinity among many other of the Negroe flates, and particularly the Whidahs. In 1697, a hog that had been teazed for fome time by one of thefe reptiles, killed and gobbled it up. The marbuts, or priefts, went with their complaint in form to the king; and no one prefuming to appear as council for defendant hog, he was convicted of the facrilege, and a warrant iffued for a general maffacre of all his fpecies throughout the kingdom. A thoufand chofen warriors, armed with cutlaffes, began the bloody execution; and the whole race of fwine would have been extirpated from Whidah, if the king (who loved pork) had not put a ftop to the dreadful carnage, by reprefenting to the marbuts, that they ought to reft fatisfied with the fevere vengeance they had taken.

\section*{Of fome Cuffoms among them.}

In hot climates, bathing is one of the higheft luxuries; it is no wonder then that we find their inhabitants univerfally adopt this agreeable practice, efpecially as cattle, wild beafts, and other quadruped animals, ufe it for their refremment. The Negroes teach their children to fwim at a very tender age; hence they become [ \(m\) ] Bofman.
\[
\mathrm{Ccc} 2 \quad \text { expert }
\]

\section*{J A M A I C A.}
expert divers, and are able to continue an incredible length of time under water; hence too they incline to fix their dwellings on the fea coaft, or the banks of the rivers, to fave themrelves the trouble of a long walk.
In thefe climates the brute creation fly to fhelter from the rain; the Negroes likewife avoid it with extreme anxiety; if they are catched in a fhower they clafp their arms over their heads to defend them, ruin with all the fpeed they can to the neareft retreat, and feem to groan at every drop that falls upon them; to preferve their bodies the better from it, they rub them over with palm oil, as the aquatic birds befmear their plumage with the oily liquor expreffed from the glands which nature has provided them with. Their women are delivered with little or no labour; they have therefore no more occafion for midwives, than the female oran-outang, or any other wild animal. A woman brings forth her child in a quarter of an hour, goes the fame day to the fea, and wafhes herfelf. Some have even been known to bring forth twins without a hriek, or a fcream; and it is feldom they are confined above two, or, at mof, three days.
Immediately before her labour fhe is conduced to the fea fide or a river, followed by a number of little children, who throw all manner of ordure and excrement at her in the way, after which fhe is wathed with great care. Without this cleanly ceremony, the Negroes are perfuaded that either the mother, the child, or one of the parents, will die during the period of lying-in. Thus they feem exempted from the curfe inflicted upon Eve and her daughters, "I will greatly multiply thy forrow; in forrow fhalt " thou bring forth children."

\section*{Medicine.}

The crigin of the invention of medicine is intirely unknown; fome afribe it to chance, others to obfervation on the couduct of brute animals; both probably combined. We know that the Northern Indians difcovered that herb, which is an antidote to the venom of the rattle frake, by the latter means. Brutes are botanifs by inflinet; whether man in his rude fate poffefles any fimilar

\section*{BOOK III. CHAP. I.}
fimilar inftinct we are uninformed, but probability is in the affirmative.

The chief medicaments among the Negroes are lime juice, cardamoms, the roots, branches, leaves, bark, and gums of trees, and about thirty different herbs. The latter have been experienced in many cafes wonderfully powerful, and have fubdued difeafes incident to their climate, which have foiled the art of European furgeons at the factories. However, tine Negroes generally apply them at random, without any regard to the particular fymptoms of the difeafe; concerning which, or the operation of their materia medica, they have formed no theory.

Efquemeling relates, that when he and his companions were amufing themfelves at Cofta Rica with fhooting at monkies, if one of them happened to be wounded, the reft flocked about him, and while fome laid their paws upon the wound, to hinder the blood from iffuing forth, others gathered mofs from the trees (or rather probably fome fpecies of Ityptic fungus) and thruft into the orifice, by which means they flopped the effufion. At other times they gathered particular herbs, and, chewing them in their mouth, applied them as a poultice; all which, fays he, "caufed in " me great admiration, feeing fuch ftrange actions in thofe irra" tional creatures, which teftified the fidelity and love they had "for one another."
From what fource did thefe monkies derive their chirurgical fkill and knowledge? From the fame, no doubt, whence the Negroes received theirs-the hands of their Creator; who has impartially provided all animals with means conducive to their prefervation.

\section*{Diet.}

Maize, palm oil, and a little ftinking filh, make up the general bill of fare of the prince and the flave; except that they regale themfelves, as often as they can, with aqua vita, and piln wine \([n]\), Their old cuitom of gormandizing on human flefh has in it fomething fo naufeous, fo repugnant to nature and reafon, that it would hardly admit of belief, if it had not been attefted by a multitude of voyagers; fome of whom affirm to have been eye-witneffes of it,
[ri] Banbot.

\section*{J A \(M\) A 1 C A.}
and, what is Aturnger, by report of Negroes themfelves imported from that continent into our colonies 10\(]\). The difficulty indeed of believing it to be true, is much leffened when we reflect on the fanguinary, cruel temper, and filthy practices of thefe people, in other refpects; many Negroes in our colonies have been known to drink the blood of their enemies with great apparent relifh; and at Benin, Angola, and other kingdoms, they at this day prefer apes, monkies, dog's flefh, carrion, reptiles, and other fubftances, ufually deemed improper for human food, although they abound with hogs, fheep, poultry, filh, and a variety of game and wild-fowl; why fhould we doubt but that the fame ravenous favage, who can feaft on the roafted quarters of an ape (that mock-man), would be not lefs delighted with the fight of a loin or buttock of human flefh, prepared in the fame manner? This opinion mut be Atrengthened by confidering the idea they entertain of the ape fpecies; for they efteem them as fcarcely their inferiors in humanity; and fuppofe they are very able to talk, but fo cunning withal, that, to avoid working, they diffemble their talent, and pretend to be dumb.

They are moft brutal in their manners and uncleanly in their diet, eating flefh almoft raw by choice, though intolerably putrid and full of meggots. Even thofe that inhabit the fea coaft, though well provided with other victuals, are fo ravenous that they will devour the raw guts of animals. The unhealthinefs of fome of the European factories here, has been imputed in great meafure to the abominable cuftom of the natives, of expofing their filh to the fun till they become fufficiently ftinking, fly-blown, and rotten. This caufes a ftench, which fills all the atmofphere in the neighbourhood; and, though infupportably offenfive to the Europeans, it does not
[ 0 ] The exiftence of canibals or man-eaters is now unqueftionably proved, by the late difcoveries made by Mr. Banks and Dr. Solander, in their voyage to the South Sea; where they found, in the country called New-Zealand, a people who fed upon human flefh. The author of "The Origin and Progrefs of language," fays, he is well informed of a nation in the inland parts of Africa, where human fleh is expofed to fale in the market, as beef and mutton ate among us; this agrees with the accounts which have been forme:ly given by fome travelers, and which till lately have not met with much credit; for this incredulity, the before mentioned ingenious author affigns a very fufficient reafon. "Thofe, fays he, who judge of mankind only by what "they fee of the modern nations of Europe, are not, I know, difpofed to believe this; but
"t they may as well not believe that there are men, who live without cloaths or houfes; without
"corn, wine, or beer; and without planting or fowing."

\section*{BOOK III. CHAP. I.}
feem to affect the Blacks with any other than the moft delicious fenfations.
At their meals they tear the meat with their talons, and chuck it by handfulls down their throats with all the voracity of wild beafts; at their politeft entertainments they thruft their hands all together into the difh, fometimes returning into it what they have been chewing. They ufe neither table-cloths, knives, forks, plates, nor trenchers, and generally 〔quat down upon the bare earth to their repaft.

Their hofpitality is the refult of felf-love; they entertain ftrangers only in hopes of extracting fome fervice or profit from them; and in regard to others, the hofpitality is reciprocal; by receiving them into their huts, they acquire a right of being received into theirs in turn. This in fact is a fpecies of generofity which gives no decifive evidence of goodnefs of heart, or rectitude of manners, except in thofe countries where no advantage is expected to be made by the hoft.
In fhort, their corporeal fenfations are in general of the groffeft frame; their fight is acute, but not correct ; they will rarely mifs a flanding object, but they have no notion of flooting birds on the wing, nor can they project a ftraight line, nor lay any fubftance fquare with another. Their hearing is remarkably quick; their faculties of fmell and tafte are truly beftial, nor lefs fo their commerce with the other fex; in thefe acts they are libidinous and fhamelefs as monkies, or baboons. The equally hot temperament of their women has given probability to the charge of their admitting thefe animals frequently to their embrace. An example of this intercourfe once happened, I think, in England [ \(p\) ]; and if luft can prompt to fuch excefies in that Northern region, and in defpight of all the checks which national politenefs and refined fentiments impofe, how freely may it not operate in the more genial foil of Afric, that parent of every thing that is monftrous in nature, where thefe creatures are frequent and familiar; where the paffions rage without any controul ; and the retired wildernefs prefents opportumity to gratify them without fear of detection!

\footnotetext{

\section*{C H A P. II.}

\section*{Guiney Slaves.}

'THE part of the African continent whence the Negroe flaves are tranfported, begins at the river Senaga, and terminates at the river Quanza, in Angola; comprehending a More of little lefs than 2000 leagues in extent, and including the feveral divifions before enumerated.

It is computed, that, for thefe hundred years paft, not lefs than 40,000 have been hipped from thence every year upon an average; which, if true, makes the whole amount not lefs than four millions.
It is a matter of furprize to fome, that fo large and continual a drain has not depopulated this country. But, independent of the prodigious extent of Afric, there are many folid reafons given why this depopulation has not, and cannot happen. The fate of navery in ufe here does not hinder depopulation, as it doubtlefs would in a civilized part of the world, where liberty is highly prized. A man or woman of fenfibility, that fenfibility encreafed by reflexion, and perhaps ftudy, would, under the yoke of flavery, be deaf to aill the calls of inclination, and refufe giving being to wretches doomed to inherit the mifery their parents feel in fo exquifite a manner. 'The idea of flavery is totally different in Afric. Exclufive of the entire abfence of keen fenfations, the flaves of a family are confidered as no mean part of it; fcarce any of them are fold, except for very great crimes. The owners are full as careful of bringing them up as their own children. For in the number of their flaves confift their wealth, their pride, and dignity; and therefore they fhew an attention to preferve and multiply them, fimilar to that of an European merchant, in the care and improvement of his money.

Slaves likewife, who have any abilities, are allowed to make the moft of them; by which means they grow rich, and able to purchafe flaves for themfelves; in this, it is faid, (I know not with what truth) they meet with no interruption, provided they acknowledge their fubfervience from time to time, and pay a tribute,

\section*{B O OK III. CHAP. II. \(3^{85}\)}
or make fatisfactory prefents to their owner and his defcendants. Elegance of thinking finds no place here; the air is foft, the food ftimulating, and the paffions unreftrained. Child-birth is attended with little or no danger or difficulty. The fruitfulnefs of the foil leaves no room to fear that children will become burdenfome; and, this anxiety being removed, nature does the reft.

Many families ally themfelves by marriage as foon as the children are born, without any other ceremony than the confent of parents on both fides. Such as have made free with the paffion before marriage, are not the lefs refpected by their hufbands, or the public: on the contrary, they are efteemed the better qualified to enter into matrimony, and are accordingly often preferred to abfolute veftals.

Scarcely any of the prifoners taken in battle are now put to death, but are almoft all fold, and brought to fome part of the coaft. Polygamy univerfally prevails, and contributes greatly to populoufnefs. Of this we may form fome judgement from Hafflequifts account of Egypt ; he informs us of a Turk, who by feveral wives had 40 children; of another who had at once in his haram feventyfeven women all with child by him; and a third who had by eight wives, in ten years, eighty children, all of whom lived to mature age. But to produce examples of the like kind among the Negroe provinces; Borman, in his account of Whidah, mentions that he had frequently feen fathers who had upwards of two hundred children. Upon interrogating a certain captain of the king's guards concerning the number of his family, he replied with a figh, that he was unhappy in that particular, not having above feventy living. Bofman then afked him how many had died, and he anfwered feventy. Thus a family of 140 children is by no means looked upon as extraordinary [q].

Of the flaves fhipped from the coaft, not a fixth part are women; and this happens from there being fewer female criminals to be tranfported, and no female warriors to be taken prifoners. The number of females born exceeds the males, and though fome Blacks in the inland countries have ten, others an hundred wives, yet by the ftricteft enquiries from the inland merchants, it appears that no man goes without a wife from a fcarcity of women; and that

Voi. II.
[q] Mod. Univ. Hift. vol. xvi, p. 402.
D d d
although

\section*{J A M A I C A.}
although the richert have many wives, the pooreft are not thereby precluded from having one or two; in fhort, that an unpaired man or woman is feldom or never feen.
Thus of many hindrances to population in Europe, not one takes place in Afric ; and fuch is the rapidity of propagation here, that it fhould feem there would be a fuperabundance of inhabitants, if the flave trade did not take fo many off. Certain it is, that in many parts of Afia the climate and other circumftances are fo much more favourable than the foil, that whillt the people multiply, the famines deftroy; for this reafon, in fome parts of China, fathers fell or expofe their fupernumerary children. It feems from hence very probable, that Afric not only can continue fupplying the Wef Indies with the fame quantities as hitherto; but, if neceffity required it, could fpare thoufands, nay millions more, and continue doing the fame to the end of time, without any vifible depopulation.
Thefe circumftances, together with the incurable ignorance and unfkilfulnefs of the natives, fpread over a country of fuch extent, abounding with gold and a multitude of other rich commodities, highly prized in Europe, feem to point it out as an object of moft valuable commerce to the trading and manufacturing nations of that quarter; we find accordingly, that Britain alone employs 50,000 tons of fhipping in it, and imports from thence to the amount of above half a million fterling, exclufive of the flaves.
The populoufnefs of this country, and firit of the people, make it reafonable to fuppofe, that the conflitution of flavery has been of fome thoufand years exiftence among them. Their commerce in flaves mult be fixed exceeding early. Jofephus, giving an account of the trade carried on by Solomon [r] with Ophir, which he places in Africa, mentions that, " befides gold and filver," there
 " much ivory, Blacks, and monkeys," which are the fame commodities that form the chief part of their trade at this day. Solomon however had no occafion for any great number of Blacks; they were bought perhaps chiefly for attending the feraglios of princes, high-priefts, and other great officers of ftate; or for adding variety to their retinues. In fome of the fubfequent ages, from the

\section*{BOOK III. CHAP. II.}
decline or ruin of thofe petty kingdoms which had ufed to traffic with them, the demand grew leis and lefs, until the Negroe provinces had no communication left, except with their neighbours, the Arabs and Moors.

The want of more extenfive vent for their fuperfluous people, occafioned thofe horrid methods of diminifhing them, of which we read in hiftory, by facrificing them to their fettifhes and great men; butchering their captives in war, and, in moft of the provinces, devouring human flefh; which perbaps fupplied them with a permanent kind of food, and made it lefs neceffary for them to break through their natural abhorrence of labour, and take the pains either of cultivating the earth, or laying up provifions againft unfeafonable years. Man's flefh was then in fuch cheap eftimation among them, that they would give ten or twelve flaves for a horfe: Labat cites an example of one being fold for forty flaves.

The Portuguefe, who were the earlieft Europeans of the modern ages that had any intercourfe with thefe people, and firft came among them about the year 1450, found flaves an eftablifhed article of their inland commerce with one another, and hence conceived the idea of turning this local medium of traffic to account, by purchafing flaves to work their mines in South America. It is not improbable too that they thought it a meritorious act to refcue fo many human victims from fuffering death and torture, under fuch idolatrous and favage cuftoms; and thus make their private gain compatible with the fuggeftions of humanity and religion.

It was the South-weft part which the Portuguefe firft grew acquainted with. Many years pafied before the Englifh entered into the flave trade; in 1621 , when captain Jobfon touched at the river Gambia in the North-weft part, the inhabitants offered him feveral flaves in exchange for goods; but he refufed, alledging "that the Englifh did not trade in them;" for a long time after, this traffic was regularly adopted by many of the different European ftates, fo abundant were flaves, and fo eager the natives to furnifh themfelves with brandy, trinkets, and other novelties, that, even in 1730 , Snelgrave tells us, he purchafed a child for a bunch of beads, worth no more than half a crown. But, to fpeak of the prefent D d d 2
ftate of this trade, the rivalihip of the Europeans, the bad management of fome factories, and the overbidding of others, have opened the eyes of the crafty natives to their intereft, and fuch a competition being extremely favourable to their avarice, they have gradually raifed the price to \(23 \%\) and \(24 \%\) per head for able men and women; but, rating the price at \(20 \%\). at medium, the annual profit to the Africans is 800,000 l. ferling, out of which their petty fovereigns on the coaft draw a tribute, by way of capitation tax on all that are exported, of not lefs than 70 or \(80,000 \%\); the moft of which, if not the whole, arifes from the extrufion of thofe, who, agreeably to the primitive frame of their conftitution and ufages, would but for this trade have been put to death, and fo loft to their country, without any refulting benefit. The love of gain, which enables them the better to gratify their pride, floth, and debauched inclinations, animates them in fupplying the trade as at prefent conducted; and although it may lead to fome acts of violence and injuftice among them, yet it has leffened the number and atrocity of thefe acts, and is attended with fuch pleafing confequences to them, that it is probable they never will let it drop willingly.

The flaves in general are,
1. Such as are captived in war.
2. Such as are fold by their brutal parents, or hufbands.
3. Native dlaves fold by their owners, generally for fome crime.
4. Such as are free born, but condemned to forfeiture of freedom for fome flagitious offence.

Of the later fort there is a great number; fince'to their natural vices is fuperadded, in fome provinces, a long lift of conftructive crimes, for which the punifhment affigned by their kings and great men is, a fine or flavery.
In fome places, offences of all forts, except treafon, are atomable with money; but, that being deficient, the penalty is flavery. In others all crimes and offences, great and fmall, are punifhed with flavery.
An owner here bas the abfolute dominion over his flaves, their bodies, life, and goods, as the kings have over thofe of their valfals. He may kill or fell his flaves and their children at pleafure; and

\section*{B OOK III. CHAP. II.}
parents confider their own offipring, as creatures wholly in their power, to be difpofed of jutt as they think proper. The children uniformly follow the condition of their mother: if the is a flave, they continue fuch, though the father be free. All their work is performed by their women and flaves, and the latter are in place of beafts of burthen. Hence the chief riches among all the Negroe flates confift in the number of their flaves. If they treat them at any time with particular indulgence, it appears to arife folely from the advantages derived from their fervice, and the fear of their elopement; but the third offence of this fort is punifhed by death, or fale to the traders, at the pleafure of their owner ; their care of the children of their flaves is founded upon the fame interefted motive; for thefe are their wealth: and many breed flaves, like cattle, to make profit by the fale of them, either to the more opulent natives, or to the Black or White traders. Before the Europeans traded to this coaft, their flaves, as well as prifoners of war, ufed to be facrificed to their divinities; flaughtered or buried alive at the funerals of their princes and chief men, and at all great feafts. Slaves and prifoners were indifcriminately devoured; and in fome provinces were regular markets, at which the aged and infirm were publicly fold for thefe ufes. There is even fome reafon to believe, that in the interior countries thefe cuftoms fill prevail in a degree, though much fewer are butchered than formerly. Indeed, the profits by felling in trade all thofe whom formerly they ured to put to death, in fo many various modes, and for various caufes, either from revenge or fuperfition, for food or amufement, are fogreat, that it is probable but very few of their flaves, prifoners, and criminals, are now put to death. As they confider their flaves merely as their neceffary beafts during life, fo they treat their bodies with no mark of humanity after their deceafe. In moft of thefrovinces they do not beftow even interment upon them, but throw their carcaffes in any open place, and leave them a prey to wild animals; in a few places only they cover them with earth, but without any ceremony.
The emoluments they draw from their flaves, in one way or other, operate as a perpetual incentive to their encouraging popula-

\section*{J A M A I C A.}
tion (already fo favoured in feveral local circumftances, as has been mentioned) to the utmon of their power; in order that they may never want a fufficient number for their domentic fervices, for agriculture, and other purpofes; befides enough of fupernumeraries, to fupport and augment their revenues arifing from trade with the Europeans. Slaves may therefore be now confidered with them, actual faple products, as much as wool and corn are to Great Britain. They have gained by this means a conftant vent for all their rogues and vagabonds; and the tranfportation of them is fo far from being a burthen to their fates, as the cafe is with refpect to the European nations, that it is highly lucrative to them. Thus they are relieved from their vileft criminals, with a large profit into the bargain; whilft the European plantations in America are made the common receptacle of thefe abandoned outcafts; and are become as ufeful to the African provinces, as fcavengers to a dirty town, or Virginia and Maryland to Britain. It is clear, that the African ftates have juft as good right as any European power, to banifh their criminals to other parts of the world that will receive them; it is certainly agreeable to the principles of humanity, that captives alfo fhould be exiled, rather than cruelly tortured to death; and by banifhment of all thefe victims for life, they reap this fure benefit, that they are effectually prevented from returning to repeat again their former courfe of criminal or hoftile practices; nor is the indemnification for thefe practices trifling, which accrues to the refpective ftates, from the fale of their bodies to the Europeans.

In England, multitudes are hanged, and many more fent to the plantations and fold into flavery; fome for a term, others for life. Such as are executed, can no longer commit injury nor do good; but of the many hundred wretches tranfported, many find methods of returning, and generally, if not univerfally, follow the fame trade of villainy as before, till they fuffer the ultimum jus of hanging. It may be faid of our Englifh tranfported felons, as of the Negroe criminals, that neither of them go into a voluntary banifhment; but it muft be allowed, that the Africans may with equal juftice fell their convicts, as the Englifh fell theirs; and equally well veft a legal right to their fervice in the purchafers. The argument that fome are wrongfully punifhed in this way, is nothing to the purpofe: it holds

\section*{BOOK III. CHAP. II.}
equally refpecting each government; for how many examples have we continually, of innocent perfons condemned to death or banifhment in England, upon falfe evidence? and if this occurs, as it frequently does, in a country that boifts of its righteous laws, and equitable forms of juftice; we ought not to be furprized, that the fame events happen in Africa, where juftice is fo ill adminiftered through the natural barbarity of the people. Exclufive therefore of this argument, the African ftates having the power of difpenfing life or death; they are likewife empowered to regulate the condition upon which life is granted, where it has been adjudged by their forms of proceeding to be forfeited to their laws, or cuftomary ufages. It may juftly then be queftioned, whether this banifhment is to be termed involuntary ; fince the parties, knowing what muft be the inevitable penalty of their doing fo or fo, might have avoided falling under it ; but by committing offences to which the penalty is annexed, they wilfully fubject themfelves to the confequential punifhment \({ }_{\text {r }}\). which is no other than flavery, perpetual or temporary, at the pleafure of their purchafers; to whofe difcretion the fellers have left it. But although it is well known that ninety-nine out of one hundred of the flaves fhipped from Africa, are now convicted felons, whofe lives were forfeited, and whofe puniflment has been commuted for flavery to the Europeans; this fact is denied, upon a fuppofition, "t that Africa could not have fo many felons yearly as there "f are flaves thus fold." To elucidate this, let us only confider, that Great Britain has above two thoufand convicted felons yearly; Africa does not fell any thing near two hundred thoufand flaves yearly; yet that would be only in the proportion of one hundred to one; and Africa is not only one hundred, but perhaps one thoufand times larger and more populous than Great Britain. It would not be wonderful then, if from thence were to be fhipped every year two hundred thoufand convicts; thefe in fact would be juft fo many lives faved, and rendered ufeful to the community; which advantages would be wholly loft, were the fave trade univerfally given up; for as the Africans are naturally thieves and villains, though flavery is the certain punifhment now on their conviction, the breaking up of the flave trade might indeed alter the puniffiment to that of death, but would not reform them; and that this would be the fure conte-

\section*{J A M A I C A.}
quence, may be judged from the well-attefted fact, that if the flaves which the Africans bring to market are fo old or blemifhed, that they cannot get what they think a fufficient price for them, they will cut their throats before the faces of the Europeans [ s ]. To abolifh this trade, is therefore 10 other than to refign them up to thofe diabolical butcheries, cruelty, and carnage, which ravaged their provinces before the European commerce with them began.

It appears from the fulleft evidence, that the provinces bordering upon the coaft do not fend any of their own natives into banifhment, unlefs for atrocious crimes; the major part are brought from the interior parts, where thefe flaves are an eftablifhed article of traffic; fome few captives of war, the reft convicts, or criminal perfons, born in a ftate of pure flavery; and over whom their owners exercife, agreeably to their ufage and conftitutions, the moft abfolute will and power.

We are informed, that the Black merchants travel many hundred miles, and collect them from the utmoft extremities of Afric; great numbers, fold from Angola, having been brought from the interior parts of 左thiopia, on the borders of the Indian ocean; and at Sabi, and in other provinces, inland, regular markets are held, where are to be fold men, women, children, hogs, fheep, goats, \&ic. in common. We find therefore, that thefe fupplies are drawn, by a variety of channels, from every part of this extenfive continent ; every province contributing a few; fo that by the time thefe feveral quotas are affembled at the coaft, or grand fhipping-place, they may well amount to a very confiderable multitude.

If a Negroe, fo purchafed, fhould, upon being tranfplanted into a country where freedom is truly underftood, alpire to get free from that bondage in which he has always lived, or to which the judgement of his fociety has decreed him; I acknowledge there are no means of preventing his attempts, but by an exertion of force. Few men (except thofe Africans who live in their own country in a fate of fervility) are without the defire of enlargement. Thefe Africans know not what freedom is, until they enter our colonies; and therefore can have no paffion for a ftate, whofe qualities they are ignorant of. In regard to other countries, and other men, the laws of
different ftates, aware of this furor for liberty, have taken care to lay reftraints upon it. In England, for example, the common labourers are obliged, by force of penal inflitutions, to remain content with a very limited portion of liberty. The felons banifled to America would foon evade their fentence, if not confrained to obedience by fuperior ftrength. Without this curb, no man would fuffer himfelf to be deprived of his perfonal freedom for debt; no feaman would fubmit to be preffed, no foldier to be retained in the fervice, no highwayman to be hanged. A labourer in England never confented to the laws which impofe reftrictions upon him ; but there is in every government a certain fupreme controuling power, included in the focial compact, having the energy of law, or publifhed and declared as the law of the land; by which every member of the community, high and low, rich and poor, is refpectively bound: it is in truth an affociation of the opulent and the good, for better preferving their acquifitions, againft the poor and the wicked. For want, complicated with mifery and vice, generally feeks relief by plundering from thofe who are better provided. An African is as much bound by this fupreme power, as the Englifh labourer.
If then every African fate has from the earlieft ages, as far as we can trace, not only tolerated a property in men, but afferted and exere cifed a right of felling their criminals, flaves of war, and native flaves, to any one that would buy them, in this transfer is implied as much right of property in the vendee, as in the vender: no one queftions in that country, not even the criminals and flaves themfelves, this right of felling, and acquiring a property; it is univerfally acknowledged; nor is the will of the party fold, ever confulted; he admits the vender's right, as part of the law or ufage of his fociety; and this precludes all idea of illegal durefs, and proves that the right of perfonal property over fuch, as are purchafed out of a itate of pure flavery, is lawfully continued to the fubfequent owners.
No one doubts, but that every contract made in Afric for the purchafe of a flave, is there underftood by the three parties, the buyer, the feller, and the perfon fold, to be perfectly firm and valid ; the one knows what he buys, the other what he fells, and the third, that his fervices are thus become tranllated to his new owner; he is confcious likewife, that he himfelf would acquire the fame right,

Vol. II.
E e e
fhould
fhould he ever become a flave-holder; accordingly we are told, that in certain provinces, the flaves are permitted to grow rich enough to become themfelves the buyers and proprietors of flaves. The commencement of this bondage therefore in Afric is fo very far from being illegal, that (refpecting the laws and cuftoms of that continent) it is univerfally admitted and fanctified by publick notoriety, eftablifhed ufage, and the general full confent of all the inhabitants. Surely, a voyage from Afric to any other country, where this claim of property is continued, cannot diffolve the bargain.

In regard to captives of war, fold as flaves, it appears that they come under that flate by an act of their own, which cannot be deemed otherwife than voluntary. It is evident, from the hiftory we have of the Negroe ftates, that the moft potent among them cannot pretend to be enfured from flavery; for it may become the lot of every one that ventures a battle. It is confiftent with every maxim of equity, reafon, and juftice, that a perfon reduced to this clafs, to which he intended reducing his conqueror, does (on the principle of enflaving, or of being enflaved) fubmit knowingly and voluntarily to the event. Among Chriftian princes at war with each other, Grotius obferves, that this practice of enflaving prifoners has entirely ceafed. But ftill fome fhadow remains among them of the original power, which the victors exercifed over their captives. Their perfonal liberty is reftrained, until they either bind themfelves not to refume arms, or until a valuable confideration is paid for their enlargement ; this confifts either of a pecuniary ranfom, or an exchange of man for man, which is the fame as giving value for value. It is faid, that a Negroe chieftain fpares the life of his captive, which fhews (according to the civilians) that he is under no abfolute necelfity of killing him. But who is to be judge of this neceffity, the civilians or the chieftain? This proves only a commutation of the mode, by which the chieftain feeks to be rid of, and to deprive his enemy of further capacity to do him hurt. His rage and his fears ufed formerly to meet fatisfaction by two ways, either by putting him to cruel death, or by holding him in ftrict bondage ; thefe both fecured him from future attacks. If he fpared his life for a time, it was only to make him drag on a miferable exiftence, under continual hard treatment; and by a lingering mifery adminifter
adminifter more zeft to implacable vengeance. This was the cuftom before the Europeans vifited the coaft. But this trade diverted the thirt of blood, and the refinements of malice, into the love of gain ; and now the practice of banihment not only gratifies this powerful incentive, but confults their fecurity equally well as the antient mode, by removing their enemies, and effectually preventing their repetition of hoftility.

They, as well as the Europeans, confider their prifoner as one who is to be redeemed with a price. They hold his body as their abfolute property; and the prifoner, from the moment of his captivity, as well as before he was made a prifoner, knows the full latitude of that power; he is confcious there is a price fixed upon his head; if he is redeemed from death by his countrymen, he is fenfible that he becomes juftly their debtor, and no lefs fo if, his countrymen refufing to ranfom him, he is redeemed by others. We form an erroneous idea of the Negroes, if we fuppofe that they prefer death to life; or that, upon the choice being offered, they would not rather be perpetual fervants to a man of tolerable humanity, than be mangled and butchered by their inhuman conquerors. But without entering into the fubtle diftinctions of civilians, which would lead us too far, it is certain, that the Negroe ftates at prefent encounter with each other, with a view chiefly to acquire as many flaves as they can: flaves being their real wealth, whether retained for their own ufe, fold to other Negroe ftates, or to foreigners; and all parties among them well underftanding this to be, if not the motive, at leaft the fure iffue, of all the wars in which they engage, they cannot be faid to fuffer injuftice who meet with that fate, which they either defign for others, or have reafon to expect themfelves.

It is faid, that many are kidnapped into our plantations. This however is a fact which wants to be proved. The trade is not now to be eftimated by the manner in which it was originally carried on (when irregular rovers of many nations made defcents upon the coaft), but as a regularly conducted, and eftablifhed plan. Our acts of parliament, and the African company, ftrittly prohibit the buying any panyard or ftolen Negroe, under fevere penalties; and the flaves bought by the factories always undergo a review of the chief men of the place, to prevent any fuch being fhipped off; their intereft
makes this caution neceffary, becaufe very difagreeable confequences might enfue to the trade, if it flould be neglected; for, many years ago, when any violences of this nature were practifed, they not only put a ftop to commerce at the particular place where they happened, but alarmed the neighbouring diftricts; and fuch injuries were ufually retaliated upon innocent navigators, who afterwards touched there, and were often furprized and murthered by the natives. Almoft every act of this fort, perhaps, has thus been atoned for at the price of blood; and it is therefore highly improbable that, under thefe circumftances, any fuch thefts can at prefent be committed ; nor would any planter knowingly purchafe Negroes obtained in that furreptitious manner, through a juft fear, that they would either thorten their lives with pining after their friends and country, or take every opportunity of eloping from him; events which he has not equal reafon to expect from exiles, whom their country has renounced, and vomited forth.
Banifhment being now fubfituted throughout mort part of the Negroe territory in Afric, in place of death; it is not furprizing, that the convicts and captives entertain horrid notions of it, and often ftruggle for relief before they quit the coaft. Many of them, it is probable, when they have committed faults, were threatened to be fold to the Europeans; and this menace may be often ufed, as the name of Marlborough was by women in France, to frighten their children into good behaviour. Perceiving that this is the general courfe of punithment, inflicted on very capital crimes, they naturally apprehend it to be a moft fevere and cruel penalty. This apprehenfion muft dwell upon their minds the more, as they remain ignorant of the fate which has attended the many other thoufand exiles, their predeceffors, none of whom return to tell the tale; fo that, no doubt, their imaginations paint the change in the moft terrific colours. Thefe prejudices are ftrengthened by the neceffity there is for treating them as condemned criminals and victims, from the time of their firf delivery into the hands of the Negroe merchants, by whom they are conducted through the country tied together with thongs to prevent their efcaping; at the faatory they are fhackled for the like reafon, and on Board thip they meet with the like treatment. Thefe precautions are injurious to their health,

\section*{BOOK III. CHAP. II.}
and confequently to the intereft of the traders; but they feem inevitable. The many acts of violence they have committed, by murdering whole crews, and deftroying fhips, when they had it left in their power to do fo, have made this rigour wholly chargeable on their own bloody and malicious difpofition, which calls for the fame confinement as if they were wolves or wild boars.

Several of the Negroes imported into our colonies, having been queftioned, as foon as they had learned Englifh enough to be underftood, what opinion they had conceived in Afric of their future deftination among the white people; it appeared from their anfwer, that fome of thefe poor wretches believe that they are bought in order to be fattened, roafted, and eaten. Others fuppofe, that the Europeans: buy them to make gunpowder of their bones; and Du Pratz fays, that the French Negroes imbibe a notion from their infancy, that the white men buy them to drink their blood; which, he tells us, is owing to this; that when the firft Negroes faw the Europeans drink red wine, they imagined it was blood; fo that nothing but experience can eradicate thefe falfe terrors: but as none of the flaves, who have had that experience, ever return to their own country, fo the fame prejudices continue to fubfift on the coaft of Guiney, where they are purchafed. Some, who are Atrangers to the manner of thinking among the Negroes, imagine, that this can be of no bad confequence. But there are many examples of the contrary, efpecially if the Negroes, on their firft arrival, meet with no other flave who can talk their dialect, and quiet their fears; for thefe have often caufed fome to hang or drown themfelves, and others to run away.

To thefe prejudices may be afcribed the reluctance they fo often manifeft, on leaving Afric. They who are fold for heinous crimes, as well as others who are fold for trivial faults, or perhaps no fault at all, are equally fufceptible of thefe apprehenfions. The merely leaving their country, can work no fuch effect on the minds of thoie who are fenfible that, if they had remained in it, or fhould return to it again, they muft inevitably fuffer death. Snelgrave mentions, that when he was on the coaft, in 1730 , the king of Old Calabar, falling, fick, caufed (by advice of his marbuts) a child about ten months old to be facrificed to his fetifhe, or divinity, for recovery. Snelgrave faw the child, after it was killed, hung up on the bough of a tree, and a

\section*{J A M A I C A.}
live cock tied to it, as an addition to the fpell. Being afterwards on another voyage at the fame place, he beheld the fame king fitting on a ftool under a fhady tree, and near him a little boy tied by the leg to a ftake driven into the ground, covered with flies and other vermin, and two marbuts ftanding by. On enquiry he learnt, it was intended to be facrificed that night to their god Egbo, for his majefty's profperity. Snelgrave redcemed the child at the king's own price, and carrying his bargain on board fhip, found that this infant's mother had been fold to him the very day before; whofe joy on thus meeting again with her fon, fo unexpeitedly refcued from the brink of flaughter, he pathetically defcribes; adding, that the fory coming to be known among all the Blacks on board, it difpelled their fears, and impreffed them with fo favourable an opinion of the white men, that although he had three hundred in all, they gave him not the leaft difturbance during the voyage. When their prejudices were diffipated by fo ftriking an example of humanity fhewn to a Negroe, they perceived the Whites were not fuch bugbears as they had been induced to believe, and grew happy and peaceable, on finding that a white mafter was likely to be more merciful towards them than a black one.

The objection, that many die in tranfportation to the colonies, does not bear againft the trade itfelf, but againft fome defect or impropriety in the mode of conducting it. A fimilar objection may lie againft cooping up debtors or other prifoners in a clofe unwholefome jail ; fending convicts to America huddled together in fmall veffels; cramming foldiers into inconvenient tranfport fhips; or impreffed men into clofe tenders, or ill-conftructed fhips of war; by all which means vaft multitudes have perifhed, without any bead-roll taken of their number, though, it is probable, the lift would run fhockingly high. To what end are the contrivances of ventilators, \&c. but the prevention or diminution of this mortality? But the mortality is fully evinced in point of fact, by the many expedients which have been recommended by humane perfons to render it lefs frequent.

The captains, I believe, to whofe charge they are committed, are careful of their healths to the utmoft of their power, confiftent with the fafety of their own lives; their intereft, and that of their employers, depends much upon it. But captains, and other feafaring men, are not often philofophers or phyficians; nor all as difcerning as a

Linde or a Macbride. The African merchants will, for their own fakes, adopt every expedient that may conduce to the good health and condition of thefe cargoes \([t]\); but even with the utmoft care it may happen, that an epidemic difeafe may break out during the paffage; probably the fmall-pox or fluxes. Accidents of this nature cannot be totally excluded; and it is fome fatisfaction to reflect, even in this cafe, that moft, or all of the poor wretches, if it were not for the trade, would have met with an untimely and more painful end in their own country; it is better furely, that a few fhould perifh by fuch cafualties, than that all thould die by the hand of an executioner. That in the native Africans fale of Negroes to our fhipping, various frauds have been committed, and perfons improperly and unjuftly fold; that merchants of fhips have been inhuman; that planters have been wantonly cruel, may be fuppofed from the enormity of crimes feen every day in the moft civilized ftates. To thefe abufes, efficacious remedies fhould be applied; and the African merchants will own the higheft obligations to government, if by falutary laws it can alleviate any diftreffes fuffered by thofe, whofe labour fupports our colonies, and enriches our mother country. But, to fay the truth, it muft be confeffed, that the difference between the condition of the Negroes in general in Africa, and in our colonies, is fo great, and fo much happier in our colonies, that they themfelves are very fenfible of it. I once interrogated a Negroe, who had lived feveral years in Jamaica, on this fubject. I afked him if he had no defire of re-vifiting his native country?
[t] The benefit of ventilators in tranfport fhips has been found very great. In a Liverpool fhip which had ventilators, not one of 800 flaves died, except only a child, born in the voyage; but in feveral other flave fhips without ventilators, there died \(30,40,50\), or 60 in a fhip.

Capt. Thompfon, of the Succefs tranfport, with 200 preffid men, delivered out of gaol with diftempers on them, were all landed fafe in Georgia (1749), though they had been detained near a twelvemonth on board; which uncommon grood luck the captain attributed to his ventilators.

Capt. Crammond, with 392 flaves bound to Buenos Ayres, carried all of them fafe by the fane means, except 12 only, who were ill with a flux when they came on board. In the year 1753, ventilators being put on board the French veffels in the flave trade at Bourdeaux, it was found that by the ufe of them, infead of one-fourth lois in long paffages from Africa to their plantations, the lofs feldom exceeded a twentieth; and one veffel faved 308 out of 312 flaves, in fpight of moft tedious calms, and a lingering paffage. So in the Nova Scotia tranfport mips, 12 to 1 more were found to die in unventilated than in ventilated fhips. Hales, on Ventilators.

Thefe examples will prove, that the fhip owners of both nations have not been wanting in the exercife of means, for preferving the lives and health of the flaves tranfported from Africa; but it appears obvious, that Englifh convicts and recruits fent over the water were fubject to equal mortan lity, till the like means were ufed for their prefervation.

\section*{J A M A I C A.}
his reply was to the following effeet; that he would much rather ftay, live, and end his days, where he was. That he could not live fo comfortably in his own country; for in Jamaica he had food and cloathing as much as he wanted, a good houfe, and his family about him; but that in Africa he would be deftitute and helplefs, without any fecurity to his life, or any of thofe enjoyments which now rendered it comfortable. Although fome few of thefe poor wretches may have inexorable tyrants for their mafters, who may treat them worie perhaps than any perfon of humanity would treat a brute; yet, in general, the cafe is very different, and one thing is felf-evident, that it being fo oppofite to the intereft of any planter thus barbaroufly to treat, or inhumanly to work his flaves to death; if ever fuch inftances of cruelty happen, the owner is, without doubt, either a fool or a madman.

Many of the Negroes in this ifland, the tradefmen, and fuch as are ufually called Houfe Negroes, live as well, or perhaps much bet.er, in point of meat and drink, than the poorer clafs of people do in England; and not one of them, even to the plantation labourer, goes through half the work; for even thofe who cultivate the lands, are not without indulgence, and frequent intervals of recreation.

If, indeed, we fuppofe a man bred up and habituated to a ftate of pure flavery among numberlefs others in the fame predicament, fubject to the vileft fpecies of bondage; that his life, his perfon, his food, and acquifitions, are all at the abfolute and arbitrary difpofal of his owner, as much as if he were a meer ox or fheep; and that he is in hourly peril of being damnified in fome one or other of them, by the wanton cruelty or caprice of his owner: let us then imagine this unhappy wretch conveyed into another region, and among a people very different from the laft, in government, manners, and difpofition; where his fervitude is tempered with lenity, where he is permitted to enjoy a little property undifturbed, where his life, his body, his food, and raiment, are protected and affured to him by public regulations; can we hefitate one moment to fay, that his yoke is now become eafy, his burthen light? and fhall we not conclude, that fuch a being, though perhaps averfe at firft to the change, through erroneous impreffions, and utter ignorance of his future deftiny, will foon difcern the more happy circumftances of his new condition, and really think, that, compared with the paft, his prefent fervices are perfect freedom.

In this light, if we la e impartial, we ought to examine the fubject; not ufing flavery as an incefinite term, but confidering how far juft our particular id a or definition of it is, when applied to this or that fet of men, who live in a different part of the world; fince what is deemed favery in one place, is far from being reputed fo in another: at Briton therefore, who has always lived in fruition of a rational freedom, muft not judge of every other man's feelings by his own ; becaufe they who have nrever experienced the fame Britifh freedom, or any degree near to it, cannot poffibly hold the fame opinion of flavery that a Briton does; for they know not how to diftinguifh it; and with fuch, the fervitude they live under, has neither horrors nor hardfhip.

Among men of fo favage a difpofition, as that they fcarcely differ from the wild beafts of the wood in the ferocity of their manners, we mult not think of introducing thofe polifhed rules and refinements, which bate drawn their origin and force from the gradual civilization of other nations that once were barbarous. Such men muft be managed at firft as if they were beafts; they muft be tamed, before they can be treated like men. Ridiculous is it, when the argument regards fuch men, to fay, that they do not come into our colony-fervitude under regular compacts! True, they do not; for, if they did, they would no longer be flaves, in the ufual acceptation of the term. As flaves, they come into the colony from their native country; but the difference lies in this, they were flaves, abject flaves in Africa, and fo would have continued, with infinitely greater difadvantages than they experience in the colony. In the former, they were fubject to all the feverities of the moft brutal and licentious tyranny, under men living in fomething worfe than a ffate of nature. In the colony, the owner of the flave receives him with a tacit agreement that his fervices fhail be requited with neceffary food and cloathing; a juft proportion and interval of reft; fome leifure too for his own particular emoluments; a weather-tight and convenient habitation; a profpect of many temporary and occafional douceurs; and even of an independence, if his deferts fhould claim it. Add to this, that his life is protected by law, and that his owner holds not an unlimited power over him. He enjoys a more narrowed degree of liberty than fome fubjects in Britain, but in feveral refpects a much larger extent than fome others. Under

Vol. II.
Fff
the

402 J A M A I C A.
the penal laws of Jamaica, he is (in general) entitled to equitable modes of juftice, trial, and judgement; from other laws he derives protection, immunities, and emoluments. In his habitation, cloathing, fubfiftence, and poffeffions, he is far happier and better provided for than moft of the poor labourers, and meaner clafs, in Britain. It is not therefore a mere found, importing flavery, that makes men flaves; the Negroes here are not the more fo for the title; although the common ideas of uninformed perfons lead them to think of their condition in the very worft fenfe which that term admits. In truth, on many plantations, and under mild mafters, if they receive not hire in money, they receive an equivalent in the neceffaries and conveniencies of life, and the peaceable enjoyment of their private acquifitions; and, what is ftill better, good ufage, and protection from injuries; which are a more current coin amongft the honeft and free-minded, than money itfelf.

It does not follow, becaufe thefe flaves are delivered into the hands of Europeans by the Negroe merchants or potentates, to be dealt with as they think proper, that the Europeans affert any power of inflicting cruelty upon them; or believe, there is any merit in abftaining from mifufage of thefe poor wretches; who might poffibly have been put to death, if they had not redeemed them.

In fact, the mof humane of the Europeans, among whom I furely may efteem the Britifh, hold them only in what Grotius and other authors difinguifh as a legitimate, equitable fpecies of fervitude; including a fort of compaet, by which (abftracted from the right acquired by purchafe) one man owes to another perpetual fervices for the prefervation of his life, for his fuftenance, and other neceffaries; and this is founded on the principles of reafon. The mafter does not extend his power over his flave beyond the bounds of natural equity, but a reciprocal obligation connects them; protection and maintenance on the one hand, fidelity and fervice on the other; this obligation has nothing in it oppreffive, but, on the contrary, gives the flave a certainty of food and conveniencies; which others often want, who hire out their labours by the day. To this effect fays alfo Gronovius, "f forafmuch as the mafter is bound to give food to his ीlave, fo is the flave bound to make a return or retribution by his labour; this duty is equally permanent on both fides:" and this is the kind of fervitude
\[
\text { BOOK III. CHAY. } 1
\]
exifting in Jamaica; the laws of which impofe fuch an obligation upon every owner of flaves, and punifh all who fail of conforming to it.

From the furvey I have taken of the African Negroes, and the nature of the flavery exifting among them, it will not, I think, be deduced, that the people they export undergo more hardhip or injury by the tranfition, than they would have fufficed in their own country.

The captives of war, inftead of being inhumanly flaughtered, pafs into a fate of fervitude, it is true; but it is fuch a fate, that, under Chriftian mafters, who, I venture to fay, are not fuch tyrants as the African flaveholders, they enjoy indulgence proportioned to, and often far tranfending, the merits of their behaviour; the comforts, even I may add, the pleafures of life; and not a few obtain their freedom.

Such as are banifhed for crimes and mifdemeanors, have reafon to rejoice at the fentence; which reprieves them from fome horrid mode of execution, and prolongs their exiftence.

Should any be unjuftly exiled, they may think themfelves bappy in being placed beyond the reach of a cruel and favage government.

If they were flaves in their own country, or had forfeited their freedom by fome crime, they have no right to repine at the want of it in the country to which they are driven. They were already flaves, and have only exchanged their owner and laws; the former, for one lefs arbitrary; the latter, for one more beneficent and gentle than they before had experience of. In general, they gain life, for death; clemency, for barbarity; comfort and convenience, for torture and mifery; food, for famine. Infomuch that, after fome trial of their new condition, under a mafter who in fact purfues his own intereft beft in treating them well, they would account it the higheft af of inhumanity to be fent back to their native country.

The choice of Negroes for different purpofes requires experience, and particular attention ; for there is not only fome variety in their paffions and bent of mind, but, from the conftitution of their native climates and local manners, they inherit a variety of different diftempers. The Coromantins, and many others of the Gold Coaft flaves, are haughty, ferocious, and ftubborn. The Minnahs, timid and defponding, apt to deftroy themfelves upon the leaft, and often without any, provocation. The Mundingo Negroes are very fubject to worm diforders; the Congos to dropfies. The Ebo men are lazy, and averfe
to every laborious employment; the women performing almoft all the work in their own country; thefe men are fullen, and often make away with themfelves, rather than fubmit to any drudgery: the Ebo women labour well, but are fubject to obftruations of the menfrua, often attended with fterility, and incurable. The Congos, Papaws, Conchas, Whidahs, and Angolas, in general, are good field labourers, but the laft-mentioned are moft fupid. The Negroes brought from Senegal are of better underftanding than the reff, and fitter for learning trades, and for menial domeftic fervices. They are good commanders over other Negroes, having a high fpirit, and a tolerable Thare of fidelity: but they are unfit for hard work; their bodies are not robuft, nor their confitution vigorous. The delicacy of their frame, perhaps, has fome effect on their minds, for they are eafier difciplined than any other of the African Blacks. The Aradas are thought to excel all the reft in knowledge of agriculture, yet their fkill is extremely incompetent. The Congos, and Gold Coaft Negroes, in generals are good fifhermen, and excel in making canoes.
It has been remarked of the Guiney Negroes, that, although they are for the greater part of ftrong, healthy bodies, they rarely live to a determinate old age in their own country.. A Negroe there of fifty is reckoned'a very old man indeed; and at forty they appear debilitated. This fhort fpan has been attributed to their exceffive venery: Buffor afcribes it to polygamy; but in Egypt, and the hotter parts of Afia, where polygamy prevails, the inhabitants are found tor attain great ages. So, in Jamaica, if they are not far advanced in years when brought over, they have been known to attain to 80 and 90 , or upe: wards; but 50 and 60 are extremely ufual.

\section*{C H A P. III.}

Of the Creole Slaves and African Negrofs in Jamaica.

THE general charater of our Creole flayes may be fummed up in the words of an old proverb, "Like mafter, like man." They are capable of being made diligent, and moderately faithful; or the reverfe, juft as their difpofitions happen to be worked upon. It cannot be doubted, but the far greater part of them are more inclined to a life of didlenefs and eafe, than a life of labour: yet the regular difcipline
to which they are inured from their infancy, becomes babitual and natural to them, as it does to foldiers, failors, and fchool-boys; and, like the latter, their principal addrefs is fhewn in finding out their mafter's temper, and playing upon it fo artfully as to bend it with moft convenience to their own purpofes. They are not lefs fludious in fifting their mafter's reprefentative, the overfeer; if he is not too cunning for them, which they foon difcover after one or two experiments, they will eafily find mears to over-reach him on every occafion, and make his indolence, his weaknefs, or fottifhnefs, anfure prognoftic of fome connfortable term of idlenefs to them: but, if they find him too intelligent, wary, and active, they leave no expedient untried, by thwarting his plans, mifunderftanding his orders; and reiterating complaints againft him, to ferret him out of his poft: if this will not fucceed, they perplex and worry him, efpecially if he is of an impatient, frelful tarn, till he grows heartily fick of his charge, and voluntarily refi, 1 Is it. An overfeer therefore, like a premier minifter, muft always expect to meet wi h a faction, ready to oppofe his adminiffration, ri,ht or wrong; unlefs he will give the reins out of his hands, and fuffer the mobility to have things their own way; which if he complies with, they will extol him to his face, contemn him in their hearts, and very foon bring his government into difgrace. But fuch a man, if he is gifted with good-nature and humanity, will eafily get the better in every ftruggle; for thefe are qualities which the Negroes prize in their fuperiors above all others. Some overfeers, unlefs fharply looked after, have been known to play the tyrant; and where this is the cafe, we cannot blame their black fubjects for wifhing a change, nor for their zealous endeavours to effect it. The old woman was much in the right, who prayed for the life of the tyrant Dionyfits, fearing, that if he died, the might fall under the dominion of a fuiccefior, ftill more odious and diabolical. It would be an act of humanity, reflecing the higheft honour on the legiflature of Jamaica, if the gentlemen who compore it floould, in imitation of the French, promulge a code of laws and ordinanees refpecting the Negroes, more particularly in the treatment of them upon their plantations; reftraining and punihhing, in an exemplary manner, all fecret pracices of barbarity; that thofe men, whofe callous hearts are impenetrable to the feelings of human nature; may be affected in fome degree by a dread of legal pains and penaltieso

Were this duly atiended to, and proper encouragement given to informers, it would be impoffible to att fuch private oppreffions often; becaufe, out of the whole poffe of white fervants on each plantation, there might always be fuppofed one or more, who, from the abhorrence of fuch practices, if not the allurement of reward, would quickly impeach the tyrant. At the fame time, the rery apprehenfion of fuch a confequence would infullibly check the moft hardened; efpecially if, in addition to other punifhment, the law fhould difqualify the offender from ever again exercifing his profeffion, or offic, within the ifland.

If every owner of a plantation refided upon it, there would be no caufe for the interpofition of legiflative authority; but it is well known, that a great many eftates belonging to different abfentees, and lying in diftant parts of the ifland, are often given up to the charge of one agent only, who cannot poffibly refide at all, nor vifit them very frequently. Matters are then left to the difcretion of overfeers, whofe chief aim it is to raife to themfelves a character as able planters, by encreafing the produce of the refpective effates; this is too frequently attempted, by forcing the Negroes to labour beyond their abilities; of courfe they drop off, and, if not recruited inceffantly, the gentleman fteals away like a rat from a barn in flames, and carries the credit of great planterfhip, and vaft crops, in his hand, to obtain advanced wages from fome new employer in another dittrict of the illand. The abfentees are too often deceived, who meafure the condition of their properties by the large remittances fent to them for one or two years, without adverting to the heavy loffes fuftained in the production of them ; and they find, too late, their incomes fuddenly abridged, and the finews of their eftate wafted far below their expectation. It might be of fervice to many of them, if they could bring themfelves to live more within bounds; be content with a moderate equal remittance, fuch as they know is proportioned to the ftrength of their labourers; and once, in a certain number of years, revifit their plantations, in order to regulate their future meafures from the plain evidence of their own eyes and ears.

When once they have fhot beyond the mark of œeconomy, and become involved in England, they grow infenfible to every other confideration than how to extricate themfelves; which is commonly atchieved

\section*{B O O K III. " CHAP. III.}
by exhaufting the vigour of their only fupporters; when a little patience, retrenchment of expences, and moderate uniform crops, would probably bring about what they wifh, without any lofs to their capital. Humanity operates here like virtue ; it is its own fure reward. It is a planter's beft intereft to be humane ; and it is clearly moft conducive to his honour and peace of mind.

The great Chriftian precept " of doing unto others what we would "that they fhould do unto us," fpeaks pathetically to every rational breaft ; though few among us paufe perhaps to afk ourfelves this candid queftion: How fhould I wifh to be treated, if I was in a ftate of fervitude, like thefe my fellow creatures? Doubtlefs we would wifh, that our mafter might be a Chriftian in practice, as well as principle, and render our condition as eafy as poffible, by a mild and compaffionate ufage. Let every overfeer and planter then only act the part of that mafter, and not be feduced, by a foolifh vanity, to plume himfelf on his happier lot, or fancy that he is created to be the tyrant, not the friend, to mankind. I fhall not attempt to give a complete defcription of all the cuftoms and manners of our Creole Negroes, fince many of them are not worth recording; and, in confequence of their frequent intermixture with the native Africans, they differ but little in many articles.

In their tempers they are in general irafcible, conceited, proud, indolent, lafcivious, credulous, and very artful. They are excellent diffemblers, and fkilful flatterers. They poffefs good-nature, and fometimes, but rarely, gratitude. Their memory foon lofes the traces of favours conferred on them, but faithfully retains a fenfe of injuries; this fenfe is fo poignant, that they have been known to diffemble their hatred for many years, until an opportunity has prefented of retali-ating; and, in taking their revenge, they fhew a treachery, cowatdice, and deliberate malice, that almoft exceed credibility. A ftupid infenfibility of danger often gives them the fpecious appearance of dauntlefs intrepidity; though, when once thoroughly made fenfible of it, none are more arrant cowards. A blind anger, and brutal rage, with them ftand frequently in place of manly valour. The impreffions of fear, naturally accompanied with cunning and warinefs, make them always. averfe to any other mode of engaging with an enemy, than by ambufcades, and furprize; and in all their boxing matches with one
another, one may obferve their efforts direfted by malice, fo foon as their fury is raifed. When they have been employed again?t the rebellious faves, each party meeting in a wood, have difperfed in an inffant, and every man fingled out his tree, behiid which he fhedtered his perfon, and fired. After the freft volley, one party generally fled; but, if both food their ground, the next conflizt was made with cutlaffes, in the management of which they are furprifingly active and ikilful, ufing either hand alternately, as they fee occation. But they would never be brought to withftand horfe, platoons, or fcrewed bayonets; nor to engage in an open place. When they did not fucceed at the firft fire, they trufted to the lightnefs of their heels, rallied at fome diftance, if not too clofely purfued, and returned again to the bufh-fight. They are remarkable, like the Norih American Iudians, for tracking in the woods; difcerning the veftige of the perfon, or party, of whom they are in queft, by the turn of a dried leaf, the pofition of a finall twig, and other infignificant marks, which an European would overlook; but I have known fome white Creoles not lefs expert at this art, which they acquired, as they faid, by frequently ranging the woods after wild hogs, or runaways. The Negroes know each other's haunts and artifices, much better than the Whites; and, probably, form their conjectures, by reflecting which way they would fteer their courfe, if they were purfued themfelves. In marcling through a wood they walk in enfilade, but do not always keep filence. Sometimes, when engaged with cutlaffes, they will fight very defperately, and ftand to it with the infenfibility of pofts, till they almoft back one another to pieces, before either will furrender.

They are in general excellent markfmen at a flanding fhot, their eye quick, and fight fo clear, that they feldom mifs; yet their vifion (as I have before remarked) is the worft poffible for the regular pofition of any thing. They cannot place a dining-table fquare in a room ; I have known them fail in this, after numberlefs endeavours; and it is the fame in other things. So that fuch as are bred carpenters and bricklayers, are often unable, after many tedious and repeated trials with the rule and plumb-line, to do a piece of work ftraight, which an apprentice boy in England would perform with one glance of his eye in a moment. It is fomewhat unaccountable, too, that they always mount a horfe on the off-fide. Their ideas feem confined to a very
few objects ; namely, the common occurrences of life, food, love, and drefs: thefe are frequent themes for their dance, converfation, and mufical compofitions.

The African, or imported Negroes, are almoft all of them, both men and women, addicted to the moft beftial vices, from which it is the more difficult to reclaim them, as they are grown inveterately confirmed by habit from their very infancy. In Guiney they are taught to regard a dram, as one of the chief comforts of life ; they grow up in this opinion: and I have feen fome of them forcing the precious liquor down the throats of their children, or pickaninnies, with the fame eagernefs that indulgent mothers in England fhew, when they cram their little favourite with fugar-plumbs. In thieving they are thorough adepts, and perfectly accomplifhed. To fet eyes on any thing, and endeavour to poffefs it, is with them intirely the fame. From this caufe it happens, that, upon their being brought into the plantations, they are foon engaged in quarrels, which fometimes are attended with fatal confequences; for, when they are prompted to revenge, they purfue it againft one another with fo much malevolence and cruelty, that the punifhment exacted is generally beyond all proportion greater than the offence can poffibly merit. It is therefore moft prudent for a planter to wink at petty offences againft himfelf, but to chaftife all thofe who are found guilty of doing injury to the perfon, or property, of their fellow Blacks; by which means he will be the conftant referee and umpire of their difputes; and, by accommodating them agreeably to jutice and right, prevent his Negroes from having recourfe to open violence, or fecret vengeance, againft each other; which are too often perpetrated with a blind and unrelenting hatred; in purfuit whereof many have been killed outright, others maimed, and not a few deftroyed by the flower operation of fome poifon.

The Creoles, in general, are more exempt from ebriety, that parent of many crimes! I have known feveral, who rejected every fort of fipituous liquor with loathing, and would drink nothing but water. If the Negroes could be reftrained intirely from the ufe of firits in their youth, they would probably never become very fond of dramdrinking afterwards. I have often thought, that the lower order of white fervants on the plantations exhibit fuch deteftable pictures of Vol. II. Gg g
drunk-
drunkennefs, that the better fort of Creole Blacks have either conceived a difguft at a practice that occafions fuch odious effects, or have refrained from it out of a kind of pride, as if they would appear fuperior to, and more refpectable than, fuch beafly white wretches. Be this as it may, there is nothing furely can more degrade a man, than this voluntary rejection of his rational faculties; deprived of which, he finks below the loweft rank of brutes. The Creole Blacks differ much from the Africans, not only in manners, but in beauty of fhape, feature, and complexion. They hold the Africans in the utmoft contempt, filing them, "f filt-water Negroes," and "Guiney " birds;" but value themfelves on their own pedigree, which is reckoned the more honourable, the further it removes from an African, or tranfinarine anceffor. On every well-governed plantation they eye and refpect their mafter as a father, and are extremely vain in reflecting on the connexion betwcen them. Thir mafter's character and repute cafts, they think, a kind of fecondary light upon themfelves, as the moon derives her luftre from the fun; and the inportance he acquires, in his ftation of life, adds, they imagine, to their own effimation among their neighbour Negroes on the adjacent effates. Their attachment to the defcendants of old families, the anceftors of which were the mafters and friends of their own progenitors, is remarkably ftrong and affectionate. This veneration appears hereditary, like clanhips in the Scotch Highlands; it is imbibed in their infancy, or founded perhaps in the idea of the relation which fubfifted between, and connected them in, the bond of fatherly love and authority on the ene fide, and a filial reverenee and obedience on the other; nor is this effect, however it arifes, unmixed with fomewhat of gratitude, for the favours and indulgencies conferred on their predeceffors; fome fruits of which they themfetves have probably enjoyed by devife; for, even among thefe flaves, as they are called, the black grandfather, or father, directs in what manner his money, his hogs, poultry, furniture, cloaths, and other effects and acquifitions, fhall defeend, or be difpofed of, after his deceafe. He nominates a fort of truftees, or executors, from the neareft of kin, who diftribute them among the legatees, according to the will of the teflator, without any moleftation or interruption, moft often without the enquiry, of their mafter ; though fome of thefe Negroes have been known to poffers from \(50 \%\), to \(200 \%\).

\section*{BOOK III. CHAP. III.}
at their death; and few among them, that are at all induftrious and frugal, lay up lefs than 20 or \(30 \%\). For in this ifland they have the greateft part of the fmall filver circulating among them, which they gain by fale of their hogs, poultry, fifh, corn, fruits, and other commodities, at the markets in town and country.

They in general love their children, though fometimes they treat them with a rigour bordering upon cruelty. They feem alfo to feel a patriotic affection for the ifland which has given them birth; they rejoice at its profperity, lament its loffes, and intereft themfelves in the affairs and politics that are the talk of the day. Whoever has ftudied their difpofition and fentiments attentively, will be of opinion, that, with mild and humane ufage, they are more likely to become the defenders than the deftroyers of their country. As a large fhare of vanity and pride may be obferveable among them, fo the better fort appear fenfible to fhame. I have known a very confiderable number of them on a plantation kept in due decorum for feveral years, with no other difcipline than keen and well-timed rebukes; and my obfervations have tended to confirm me in opinion, that our Creole Blacks (for I fpeak of them only) may, with a very moderate inflruction in the Chriftian rules, be kept in good order, without the whip. Rafh correction has often rendered them ftubborn, negligent, and perverfe, when they might have been influenced chearfully to perform every thing required of them, by judicioully working on their vanity; by beftowing feafonable rewards and encomiums on their praife-worthy conduct, and by ftinging reproaches for their mifdemeanors. There are many artifices to be practifed with the greateft fuccefs ; fuch as, degrading for a while from fome employment eftecmed among them a poft of diftinction, and authority; holding them up to the ridicule of their fellow Blacks, and the like. What they endure, upon thefe occafions, has nothing in it of that fenfe of vile abafement, which corporal inflitions are apt to produce ; and whenever corporal punithment is carried to extreme, it is fure to excite a hearty and indelible contempt and abhorrence for the inflictor.

The force of ridicule, on the contrary, brings upon them the cutting fineers of the other Negroes, and always turns the edge of their contempt and rage from their mafter, to themfelves; and hence they may fmart more feverely under fuch reprehenfion, than they would

G g g 2
under

\section*{J A M A I C A.}
under the fcourge. Every overfeer has not the patience, or talents, to qualify him for this mode of governing, but all fhould endeavour at it ; and, for this purpofe, it is neceffary for each of them to ftudy well the temper of every Creole Black under his particular command, to learn fomewhat of their private hiftory, and never betray any fign of heat or paffion in his admonitions.

The firft and chief requifite therefore is to know how to command his own temper; for, without having gained this advantage, he is totally unfit to be a manager of other mens; but having once gained this point, he need not doubt of paffing through a fuccefful adminiftration.

It is certain, that the Negroes, fo far from fuffering any inconvenience, are found to labour with moft alacrity and eafe to themfelves in the very hotteft part of the day. The chillnefs of the morning air in this ifland feems to caft a damp upon their fpirits, and renders them for a time feeble and torpid; one fees them creeping flowly out of their huts, bundled up with thick cloathing, fhivering, and uneafy; but as the day advances, they grow more and more active and alert. The opennefs of their pores gives a free tranfpiration to bad humours; and they would enjoy robuft health, under the hardeft toils expedient here, if they were lefs prone to debauch, and venereal excefs. They love warmth in the night, and never fleep without a fire in their hut; the watchmen too, in the open air, lay themfelves upon a board, by a rouzing fire, and fometimes fo near, as to fcorch their very fkins; for it is to be obferved, that thefe nocturnal guards, like thofe of London, after a comfortable repaft in the evening, have no objection to amufe themfelves, for the remainder of the night, with a dog's fleep. They account thoes and ftockings very ufelefs incumbrances; and the foals of their feet, by conftant expofure, acquire the callofity and firmnefs of a hoof; but fome, who are to take a journey over very rocky roads, prepare themfelves with fandals, cut from an ox-hide, which they bind on with thongs. They dread rain upon their bare heads almoft as much as the native Africans; perhaps, their woolly fleece would abforb it in large quantity, and give them cold. When they are caught in a fhower, it is very common to fee them pull off Shirt and jacket, and fometimes their breeches or trowfers, all which they wrap up in a bale, and place upon their heads. They are fond

\section*{BOOK III. CHAP. III.} of covering this part of their bodies at all times, twifting one or two handkerchiefs round it, in the turban form, which, they fay, keeps them cool, in the hotteft funfhine. The fame cuftom prevails among the Eaftern nations, and probably from the like reafon; even the free Mulatto women here think themfelves not compleatly dreft without this tiara, and buy the fineft cambric or mullin for the purpofe, if their pockets can afford it. The Creole white ladies, till lately, adopted the praciice fo far, as never to venture a journey, without fecuring their complexions with a brace of handkerchiefs; one of which being tied over the forehead, the other under the nofe, and covering the lower part of the face, formed a compleat helmet. The Negroes ufe their heads, inftead of their fhoulders, or backs, for carrying all forts of burthens; with a dried plantain leaf they plait a circular pad, which they call a cotta; upon this, the load refts, and preferves their wool from being rubbed off. This cuftom enlarges, and ftrengthens, the mufcles of their necks, in an amazing degree; and it is really wonderful to obferve, what prodigious loads they are able to carry in this manner, with the greateft apparent eafe; infomuch, that they will even run with them, and affirm, at the fame time, with a laugh, that they feel no weight; perhaps, the perpendicular pofition of the load, and the equilibre which, from habit, they know well how to give it, produce this facility of carriage, while the incumbent preffure is diminifhed in proportion to the velocity of their progreffive movement under it ; this, however, is no more than happens every day with the London porters, fome of whom will carry 300 lb . weight. The cotta ferves likewife for another purpofe; on the voluntary divorce of man and wife, it is cut in two, and each party takes half; as the circle was a fymbol of eternity, and the ring of perpetual love or fidelity, fo this ceremony, perhaps, is meant to exprefs the eternal feverance of their mutual affection. Their diet conffifts generally of pulfe, herbs, plantains, maize, yams, or other roots, prepared with pork, and filh, frefh or falt; falted beef, herrings, jerked hog, or fowls. Salt fifh they are extremely fond of, and the more it ftinks, the more dainty; they make likewife a kind of puciding, with pounded maize ; and fometimes of the fweet potatoe, which they call a pota-toe-pone; their broths, or pots (as they are termed), are well feafoned with the country peppers; ocbra is a principal ingredient ; and they are
extremely rclinhing, and nutritive; but they come doubly recommended by the cleanlinefs of preparation, their cooks ufually wafhing their hands three or four times, whilft they are about it; I mean the Creole Blacks, and better fort of the Africans; for as to the reft, they feed with all the beftiality peculiar to the genui e breed of Guiney. Cane rats are much in efteem, and, when roahted and fuffed, are faid to have a delicate flavour; but, to fee them impaled before the fire with their goggle eyes and whikers, is enough to turn an European ftomach; the Creoles wafh their mouths, as foon as they awake in the morning. About noon is their ufual time of bathing, in fome river open to the fun. They firft wet their bodies all over, then roll in the fand, and plunge into the water; this method ferves to cleanfe their fikins, as well as foap, or a flefh brufh.

They are all married (in their way) to a hufband, or wife, pro tempore, or have other family connexions, in almoft every parifh throughout the ifland; fo that one of them, perbaps, has fix or more hulbands, or wives, in feveral different places; by this means they find fupport, when their own lands fail them; and houfes of call and refrefhment, whenever they are upon their travels. Thus, a general correfpondence is carried on, all over the ifland, amongft the Creole Blacks; and moft of them become intimately acquainted with all affairs of the white inhabitants, public as well as private. In their houfes, they are many of them rery neat and cleanly, piquing themfelves on having tolerably good furniture, and other conveniencies. In their care for their children, fome are remarkably exemplary. A Negroe has been known fo earneft and fincere in the tuition of his child, as to pay money out of his own pocket for finith's work, to keep a truant fon employed, during his apprenticefhip to that bufinefs, that he might not become remifs in acquiring a proper knowledge of it, for want of work. They exercife a kind of fovereignty over their children, which never ceafes during life; chaftizing them fometimes with much feverity; and feeming to hold filial obedience in much higher eftimation than conjugal fidelity; perhaps, becaufe of the whole number of wives or hulbands, one only is the object of particular fteady attachment; the reft, although called wives, are only a fort of occafional concubines, or drudges, whofe affiftance the hufband claims in the culture of his land, fale of his produce, and fo or ; rendering to them reciprocal acts of friendhip, when they are in want. They laugh at the idea of a marriage, which ties two perfons together indiffolubly. Their notions of love are, that it is free and tranfitory.

This is well known to their white gallants, for even the authority of a mafter muft bend to the more abfolute empire of Cupid; nor is the fable beauty (except a very common hack) to be won, without fome previous addrefs and courthip; in the progrefs of which the powerful charms of gold muft generally lend their aid, to make the moft paffionate fuitor fucceffful; thefe belles allowing nothing more of their perfons than their head, hands, and feet, to be at their mafter's difpofal. Their propenfity to lazinefs is chiefly confpicuous anong the domeftic fervants, who are never more happy than when they can find a commodious poft, pillar, or corner of a houfe, to loll againft, whilft they are taking a nap. I have even feen them fall faft afleep, whilft attending at table, behind a gentleman's chair. Like fome other animals, they are fond of caterwauling all night, and dozing all the day. If they indulge in fleep at night, one muft fuppofe they are very little difturbed with anxious thoughts. Their repofe is perfectly found; infomuch that fometimes they are rouzed with the utmoft difficulty; the loudeft clap of thunder, or the report of a cannon at their ear, would not wake them. On the plantations I have feen fome, but they are mofly Africans, fo exquifitely indolent, that they have contracted very bad ulcers on their feet, by fuffering multitudes of chiegos to neftle and generate there, rather than give themfelves the trouble of picking them out.

Although fome domeftics are very trufty fervants; the greater number are fo, merely becaufe they have no fit inducement to be otherwife, or no means of bettering their condition. But when occafion offers, of ferving themfelves by a roguifh fhift, adieu fidelity! You may, confide a fum of money to a Negroe's charge, and he will deliver it punctually; but, beware of leaving any fum cafually in bis way, for he would not be able to reffif the temptation of ftealing it; his fidelity, in the former cafe, arifes from his defire to imprefs you with: the beft opinion poffible of his honeft dealing, in order that you may afford him more convenient opportunities of pilfering from you, without immediate detection. It reflects no great honour on their dif.. pofition, that the freed Blacks and Mulattos are obferved to treat their
their flaves with extraordinay harfinefs, and fometimes even barbarity ; a fure characteriftic of a vindietive, bafe, and cowardly mind.

The domeftics are remarkably adroit in the negociation of all intrigues, and affairs of gallantry; and fhew a peculiar delight on being entrufted plenipos, to aifit at thefe congreffes of love. Upon thefe occafions, the brain of a Spanifh enamorato, or an Italian cecibeo, cannot be more fruitful of expedients. The fuperfition of thefe Blacks is carried to very fingular lengths, although the more polifhed among them believe in a future ftate of reward and punifhment; they do not confider certain acts to be criminal, which are ufuaily reputed fuch among true believers.-Murder is with moft of them efteemed the highef impiety.-Filial difobedience, and infulting the athes of the dead, are placed next. But as for petty larcenies, affairs of gallantry, fornication, \(\mathcal{B c}\) c. they are reputed only peccadilloes, which are fufficiently punifhed in this world, with the baftinadoe, or the diftempers occafioned by them. The greateft affront that can poffibly be offered a Creole Negroe, is to curfe his father, mother, or any of his progenitors. This generally provokes a fpeedy revenge on the aggreffor, after every other mode of provocation has failed. They firmly believe in the apparition of feecres. Thofe of deceafed friends are duppies; others, of more hoftile and tremendous afpect, like our raw-head-and-bloody-bones, are called bugaboos. The moft fenfible among them fear the fupernatural powers of the African obeab-men, or pretended conjurers; often afcribing thofe mortal effects to magic, which are only the natural operation of fome poifonous juice, or preparation, dexteroufly adminiftered by thefe villains. But the Creoles imagine, that the virtues of baptifm, or making them Chriftians, render their art wholly ineffectual; and, for this reafon only, many of them have defired to be baptized, that they might be fecured from Obeab.

Not long fince, fome of thefe, execrable wretches in Jamaica introduced what they called the myal dance, and eftablifhed a kind of fociety, into which they invited all they could. The lure hung out was, that every Negroe, initiated into the myal fociety, would be invulnerable by the white men; and, although they might in appearance be flain, the obeah-man could, at his pleafure, seftore the body to life. The method, by which this trick was
carried on, was by a cold infufion of the herb branched colalue \([u]\); which, after the agitation of dancing, threw the party into a profound fleep. In this fate he continued, to all appearance lifelefs, no pulfe, nor motion of the heart, being perceptible; till, on being rubbed with another infufion (as yet unknown to the Whites), the effects of the colalue gradually went off, the body refumed its motions, and the party, on whom the experiment had been tried, awoke as from a trance, entirely ignorant of any thing that had paffed fince he left off dancing. Not long ago, one of thefe myal men, being defirous of feducing a friend of his to be of their party, gave him a wonderful account of the powerful effects produced by the myal infufion, and particularly that it rendered the body impenetrable to bullets; fo that the Whites would be perfectly unable to make the leaft impreffion upon them, although they were to fhoot at them a thoufand times. His friend liftened with great attention, but feemed to doubt the truth of it exceedingly; but, at length, propofed to the other, that, if he was willing to ftand a fhot, he fhould be glad to make the experiment; and, if it turned out as he pretended, he himfelf would then moit readily confent to be a myal man. To this the other agreed, not imagining, perhaps, that matters would come to extremity ; or elfe convinced in his own mind of the reality of what he afferted. Having prepared himfelf, he ftood up to receive the fhot. His

\footnotetext{
[u] This herb is a fpecies of folanum, and is the aquaraguia of Brafil. Pifo, 223. Browne, 174 . It is very common in the lowlands of Jamaica. It is alfo called the jolanum formiferum officinale. The Negroes make ufe of it daily for food in their broths; and it is found, by long experience, to be a pleafant and wholefome green. Barham fays, he was furprized to fee the Angola Negroes eat it as we ufe fpinnage in Europe, without any prejudice, it has fo ftrong a refemblance to the deadly nighthade. Pifo fays, "that the rind of it, bruifed and fteeped in water, intoxicates fifh "fo, that they may be eafily taken, but does not kill them." The juice is cooling and reftringent ; the leaves, applied to the head in phrenetic fevers, give eafe. It is probable, its narcotic qualities are deftroyed by the fire in boiling; but that the crude juice, or a cold infufion of the bark and leaves, would be found to poffefs them in a high degree; which agrees with Pifo's account of the effects on finh. The myal gentry make the infufion with rum. In regard to the other infufion, which puts an end to its operation, we can only conjecture. It is polfible, that, by frequent trials, the Negroes have found pretty accurately the length of time which the fleep may laft, and fo take care to proportion the dofe. Befides, it has lately been difcovered, that vegetable acids, fuch as lime-juice, vinegar, \&c. are antidotes to the effect of opium, and all vegetable poifons, taken internally : their external application has not been tried; but might probably anfwer the fame purpofe, efpecially towards the decline of the fleepy fit; and I think it is not unlikely, that theif. Negroes ufe them to revive their myal men.

friend

\section*{J A M All C A.}
friend fired, and killed him dead. This accident, with the circumftances leading to it, were foon made known; and, for fome time, brought the priefts and their art into great difrepute among all their converts. The dexterity of thefe priefts, or conjurers, in the preparation of poifons, has been mentioned by many authors. Kalm obferves, that this art is known to the Negroes of NorthAmerica, in the provice of Pennfilvania; and that they frequently practife it on one another. This poifon does not kill immediately; for fometimes the fick perfon dies fome years after: but, from the moment he receives the poifon, he falls into a decline, and enjoys but few days of good health. Kalm fays, they commonly employ it on fuch of their brethren who behave well; are beloved by their mafters; and feparate, as it were, from their countrymen, or do not like to converfe with them. There are likewife other reafons for their enmity; but there are few examples of their having poifoned their mafters. Perhaps, the mild treatment they receive keeps them from it ; or they fear a difcovery, and that in fuch cafe their punifhment would be very fevere \([w]\). Sir Hans Sloane gives one or two inftances of this practice in Jamaica. And Dr. Barham tells us, that the favannah flower, which grows exceedingly common in all the lowlands of that inland, has been made ufe of for this purpofe. It is a fpecies of dog's bane; the apocynum erectum of Sir Hans Sloane, p. 206; the nirium of Browne, p. 180. It is one of the rankeft poifons in the world. Barham fays, he faw but two drachms of the expreffed juice given to a dog, which killed him in eight minutes; but that it may be fo ordered, that it fhall not deftroy a perfon in many days, weeks, months, or years. Some call it the Spanifh gilly-flower. Some years paft (continues he) a practitioner of phyfick was poifoned with this plant by his Negroe-woman, who had fo contrived it, that it did not difpatch him quickly; but he was feized with violent gripings, inclination to vomit, lofs of appetite, and afterwards fmall convulfions in feveral parts of his body, a hectic fever, and continual wafting of his flefh. Upon application to Dr. Barham for advice, he gave him fome nbandiroba kernels, to infufe in wine, and drink frequently; which cured him in time; but it was long before the convulfive fymptoms left him. This plant is an ever-green; and it is remarked, that no animal will meddle with it, although in the greateft drought, and when no other green thing appears. The root, dried and powdered, is purgative. The milky juice of the plant is a fevere cauftic, and takes away warts and ring-worms. Barham gives another inftance of its deleterious effects. A Negroe, having fome rum in a jar, ignorantly ftopped the mouth of it overnight with fome leaves gathered from this plant, one or two of which fell in, and fo imparted their noxious quality to all the liquor. The next morning, he drank fome of it himfelf, and diffributed drams to feveral of his countrymen; but, in lefs than two hours, they were all feized with violent vomiting, and tremors all over their bodies. Upon the alarm being given, a furgeon was fent for; but, before he could arrive, three of them expired, and anather lay at the point of death. Some Indian arrow-root was immediately got, bruifed, and the expreffed juice adminiftered. The firft glafs revived the Negroe that appeared to be dying; the fecond brought him to the ufe of his fpeech; and, upon repeated dofes, he continued mending till he was perfectly recovered. The nhandiroba is a climbing plant. Pifo, p. 259, calls it likewife acaricobo, ambuyaembo, and caapeba; and thus defribes it. It is a feecies of climbing ivy. Its leaves are difpofed like the ivy; fomewhat roundih; and, as it were, terminating in three points, green, fmooth, and gloffy; the flowers fmall, of a duiky pale hue; the fruit round, green, fhining, about the fize of a large apple, the upper part appearing with a circular indentation, and at the centre three lines uniting together at the extremity in an obtufe angle. The fruit on the infide is difpofed fomewhat like the walnut, but in three diftinct cavities, appearing, upon taking off the rind, perfectly white, and containing an oily kernel, of a pale yellow colour, inclofed in a pellicle. From this kernel an oil is extracted, which may be ufed for lamps, and holds a long time in burning; but it is of no ufe for food, becaufe it is extremely bitter, as well as the fruit. Barham fays, the firft time he met with this plant was in St. Thomas in the Vale ; where he faw it climbing and running up to the top of very high trees. It happened to be in fruit. Its leaf much refembles the Englifh ivy; but the fruit \(\mathrm{Hhh}_{3}\)
is like a green calibafh; only it has a circular black line round it, and two or three warts or little knobs. The infide of the thell is full of white, flattifh beans, inclofed in a white membranous fubftance ; and, when thoroughly ripe, the fruit turns of a brownifh caft, like a ripe calabafh. The beans or nuts are then of a lightifh brown colour, covered with a thin, hard cruft, in which is a whitifh kernel full of oil, and exceffively bitter. The nuts are generally ten or twelve in a fhell, clofe and compreffed; fo that, after being taken out, they cannot be replaced. He fays, the Spaniards call it avilla; and the Negroes, that he employed to gather it, called it fabo. It feems to be a fpecies of the fevillea foliis cordatis angulatis, Linnxi, Sp. Pl. Angl. "antidote cocoon of "Jamaica;" whofe kernels yield a great deal of oil, of a bitter tafte, and ured here for burning. The Negroes infufe thefe kernels, when dried and fcraped into a powder, in rum, to relieve pains in the ftomach. They alfo efteem them antidotes to poifon. But the pod feldom contains above three, or at moft four, feeds; and therefore it cannot be the fame as Barham's. Browne mentions very imperfectly, p. 373, a plant which he faw growing, on the windward part of Montferrat, at the fide of Kaby's Gully; which bore white bloffoms, fucceeded by many large apples, containing a number of large compreffed feeds, difperfed in the pulp of the fruit; which probably is the fame as that defribed by Barham.
But to return. The Negroes wear the teeth of wild cats, and eat their fleth, as a charm for long life; for they hold the vulgar opinion, that a cat has nine lives. Thus, by affmilation of the cat's flefh and juices into their own, they imagine they can enfure longevity, and a power of fuftaining great fatigues. Many a poor grimalkin has fallen a victim to this ftrange notion. Bits of red rag, cats teeth, parrots feathers, egg-fhells, and fim-bones, are frequently ftuck up at the doors of their houfes when they go from home leaving any thing of value within (fometimes they hang them on fruit-trees, and place them in corn-fields), to deter thieves. Upon converfing with fome of the Creoles upon this cuftom, they laughed at the fuppofed virtue of the charm, and faid they practifed it only to frighten away the falt-water Negroes, of whofe depredations they are moft apprehenfive. Their funerals are the very
reverfe of our Englifh ceremony. The only real mourners are the hurband, wife, or very near relations of the deceafed; yet even thefe fometimes unite their voices to the general clamour or fong, whilf the tears flow involuntarily down their cheeks. Every funeral is a kind of feftival; at which the greater part of the company affume an air of joy and unconcern; and, together with their finging, dancing, and mufical inftruments, confpire to drown all fenfe of affliction in the minds of the real mourners. The burthen of this merry dirge is filled with encomiums on the deceafed, with hopes and wifhes for his happinefs in his new ftate. Sometimes the coffin-bearers, efpecially if they carry it on their heads, pretend that the corpfe will not proceed to the grave, notwithftanding the exertion of their utmoft ftrength to urge it forwards. They then move to different huts, till they come to one, the owner of which, they know, has done fome injury to, or been much difliked by, he deceafed in his life-time. Here they exprefs fome words of indignation on behalf of the dead man; then knock at the coffin, and try to footh and pacify the corpfe: at length, after much perfuafion, it begins to grow more paffive, and fuffers them to carry it on, without further ftruggle, to the place of repofe. At other times, the corpfe takes a fudden and obftinate averfion to be fupported on the head, preferring the arms; nor does it peaceably give up the difpute, until the bearers think proper to comply with its humour. The corpfe being interred, the grave is but flightly overfpread with earth. Some fcratch up the loofe mould, with their backs turned to the grave, and caft it behind them between their legs, after the manner of cats which have juft exonerated. This, they fay, is done, to prevent the deceafed perfon from following them home. When the deceafed is a married woman, the hufband lets his beard remain unfhaved, and appears rather negligent in his attire, for the fpace of a month ; at the expiration of which, a fowl is dreffed at his houfe, with fome meffes of good broth, and he proceeds, accompanied by his friends, to the grave. Then begins a fong, purporting, that the deceafed is now in the enjoyment of compleat felicity; and that they are affembled to rejoice at her ftate of blifs, and perform the laft offices of duty and friendfhip. They then lay a confiderable heap of earth over the grave, which is called con
vering it; and the meeting concludes with eating their collation, drinking, dancing, and vociferation. After this ceremony is over, the widow, or widower, is at liberty to take another fpoufe immediately; and the term of mourning is at an end.

The Negroe funeral calls to mind the late-ruake of the highlands in Scotland, thus defcribed by Mr. Pennant. The evening after the death of any perfon, the relations and friends of the deceafed meet at the houfe, attended by bag-pipe and fiddle. The neareft of kin, be it wife, fon, or daughter, opens a melancholy ball, dancing and greeting (i.e. crying violently) at the fame time. This continues till day-light, but with fuch gambols and frolics among the younger part of the company, that the lofs which occafioned them is often more than fupplied by the confequences of that night. If the corpfe remains unburied for two nights, the fame rites are renewed. Thus, Scythian-like, they rejoice at the deliverance of their friends out of this life of mifery. The coranich, or finging at funerals, is ftill in ufe in fome places. The fongs are generally in praife of the deceafed, or a recital of the valiant deeds of him or his anceftors.

Cambden, in his account of the antient Irifh, mentions their cuftom of ufing earneft reproaches and expoftulations with the corpfe, for quitting this world, where he (or fhe) enjoyed fo many good things, fo kind a hufband, fuch fine children, \&cc. There feems a ftriking conformity between this antient rite and that in ufe among the Negroes.

The Negroes ftrew grave-dirt on the highway when any thing is ftolen from them, intimating this curfe: "May the thief be re"duced to the fame fate and condition as the corpfe which lies bu" ried in the grave whence this dirt was taken! may his exiftence " be fhort! may he not live to enjoy his theft! but be crumbled "6 and trampled under foot, like the foil of a public road!"

This dirt is a material ingredient in their folemn oaths, which are adminiftered in the following manner. A fmall quantity of the earth is mixed with water in a calibah. The perfon who tenders the oath dips his finger into the mixture, and croffes various parts of the juror's naked body, repeating the following imprecation as he touches each part, the juror affenting at the clofe

\section*{BOOK III. CHAP. III.}
of every fentence; after which, he drinks up the refidue of the mixture, and may therefore be faid literally to frwallow the oath, which is to this effect. If I have (ftolen this hog, fowl, corn, or-as it may happen to be the cafe), may the grave dirt make my bowels rot! may they burft and tumble out before my face! may my head never ceafe to ach! nor my joints to be tortured with pain! \&c. Regularly, the oath ought to be adminiftered by an obeah man; but their fupertition makes them hold it in great reverence and horror, even when adminiftered by any other Black, efpecially by an old man or woman: but they do not apprehend any ill confequence will arife from breaking it, when tendered by a white perfon.

They have good ears for mufic; and their fongs, as they call them, are generally impromptus, without the leaft particle of poetry, or poetic images, of which they feem to have no idea. The tunes confift of a folo part, which we may ftyle the recitative, the key of which is frequently varied; and this is accompanied with a full or general chorus. Some of them are not deficient in melody; although the tone of voice is, for the moft part, rather flat and melancholy. Inftead of choofing panegyric for their fubject-matter, they generally prefer one of derifion, and not unfrequently at the expence of the overfeer, if he happens to be near, and liftening: this only ferves to add a poignancy to their fatire, and heightens the fun. In the crop feafon, the mill-feeders entertain themfelves wery often with thefe jeux d'e/prit in the nighttime; and this merriment helps to keep them awake.
Their merry-wang is a favourite inftrument, a ruftic guitar, of four ftrings. It is made with a calibanh; a flice of which being taken off, a dried bladder, or fkin, is fpread acrofs the largeft fection; and this is faftened to a handle, which they take great pains. in ornamenting with a fort of rude carved work, and ribbands.
The grombab, another of their mufical inftruments, is a hollow block of wood, covered with fheep-fkin ftripped of its hair. The mufician holds a little ftick, of about fix inches in length, fharpened at one end like the blade of a knife, in each hand. With one hand he rakes it over a notched piece of wood, fixed acrofs the infrument, the whole length, and croffes with the other alternately,

\section*{J A M A I C A.}
ufing both with a brifk motion; whilft a fecond performer beats with all his might on the fheep-1kin, or tabor.

Their tunes for dancing are ufually brifk, and have an agreeable compound of the vivace and larghetto, gay and grave, purfued alternately. They feem alfo well-adapted to keep their dancers in juft time and regular movements. The female dancer is all languifhing, and eafy in her motions; the man, all action, fire, and gefture; his whole perfon is varioufly turned and writhed every moment, and his limbs agitated with fuch lively exertions, as fervo to difplay before his partner the vigour and elafticity of his mufcles. The lady keeps her face towards him, and puts on a modeft demure look, which the counterfeits with great difficulty. In her paces the exhibits a wonderful addrefs, particularly in the motion of her hips, and fteady pofition of the upper part of her perfon: the right execution of this wriggle, keeping exact time with the mufic, is efteemed among them a particular excellence; and on this account they begin to practife it fo early in life, that few are without it in their ordinary walking. As the dance proceeds, the mufician introduces now and then a paufe or reft, or dwells on two or three pianiflemo notes; then ftrikes out again on a fudden into a more spirited air; the dancers, in the mean while, correfponding in their movements with a great correctnefs of ear, and propriety of attitude; all which has a very pleafing effect.

In the towns, during Chriftmas holidays, they have feveral tall roburt fellows dreffed up in grotefque habits, and a pair of oxhorns on their head, fprouting from the top of a horrid fort of vizor, or mafk, which about the mouth is rendered very terrific with large boar-tufks. The mafquerader, carrying a wooden fword in his hand, is followed with a numerous croud of drunken women, who refrefh him frequently with a fup of anifeed-water, whilft he dances at every door, bellowing out John Conmu'! with great vehemence; fo that, what with the liquor and the exercife, moft of them are thrown into dangerous fevers; and fome examples have happened of their dying. This dance is probably an honourable memorial of John Conny, a celebrated cabocero at Tres Puntas, in Axim, on the Guiney coaft; who flourifhed about the year 1720. He bore great authority among the Negros of that diftrict. When
the Pruffians deferted Fort Brandenburgh, they left it to his charge; and he gallantly held it for a long time againft the Dutch, to whom it was afterwards ceded by the Pruffian monarch. He is mentioned with encomium by feveral of our voyage-writers.

In 1769, feveral new mafks appeared; the Ebos, the Papaws, \&xc. having their refpective Connús, male and female, who were dreffed in à very laughable ftyle.

Thefe exercifes, although very delightful to themfelves, are not fo to the generality of the white fpectators, on account of the ill fmell which copioully tranfudes on fuch occafions; which is rather a complication of ftinks, than any one in particular, and fo rank and powerful, as totally to overcome thofe who have any delicacy in the frame of their noftrils. The Blacks of Afric affign a ridiculous caufe for the fimell peculiar to the goat; and with equal propriety they may well apply it to themfelves. They fay, "that, " in the early ages of mankind, there was a the-divinity, who ufed " to befmear her perfon with a fragrant ointment, that excited the "emulation of the goats, and made them refolve to petition her, " to give them a copy of her receipt for making it, or at leaft a " fmall fample of it. The goddefs, incenfed at their prefumption, "thought of a method to be revenged, under the appearance of " granting their requeft. Inftead of the fweet ointment, the pre"fented them with a box of a very foetid mixture, with which " they immediately fell to bedaubing themfelves. The ftench of " it was communicated to their pofterity; and, to this day, they "remain ignorant of the trick put upon them, but value them"felves on poffeffing the genuine perfume; and are fo anxious to " preferve it undiminithed, that they very carefully avoid rain, and "every thing that might poffibly impair the delicious odour." This rancid exhalation, for which fo many of the Negroes are remarkable, does not feem to proceed from uncleanlinefs, nor the quality of their diet. I remember a lady, whofe waiting-maid, a young Negroe girl, had it to a very difagreeable excefs. As the was a favourite fervant, her miftrefs took great pains, and the gisl herfelf fpared none, to get rid of it. With this view, fhe conftantly bathed her body twice a day, and abftained wholly from falt-fifh, and all forts of rank food. But the attempt was fimilar Vol. II.
I i i
to wathing the Black-a-moor white; and, after a long courfe of endeavours to no purpofe, her miftrefs found there was no remedy but to change her for another attendant, fomewhat lefs odoriferous.

The labouring Negroes are all allowed, by their mafters, a frock and trowfers for the men, and the women a jacket and petticoat of ofinabrig, befides woollen ftuff; but tradefmen, and the better fort, are generally fupplied likewife with checks, handkerchiefs, hats, and caps; and the laws of the ifland oblige every owner to give his Negroes proper cloathing. What they receive annually in this manner compofes their working-drefs: but there are few of them who do not acquire fufficient profit, by their huckftering traffic, to furnifh themfelves with a wardrobe of better cloaths for holidaywear; upon thefe they beftow as much finery as their circumftances will permit, invariably preferring the gaudieft colours.

They fupply their ignorance of letters by a kind of technical memory. Few of them can afcertain their own age, or that of their children; but, when queltioned about any event that has happened in the courfe of their lives, they recur to a ftorm, a particularly dry or wet feafon, and the like, and reckon by the number of Chriftmafes they recollect fince thofe periods. Thus, if you afk a Negroe how long ago it was that he left Africa, he anfwers, eight, ten, twelve Chriftmas, according as the cafe happens to be, or according to his remembrance. They have no computation for the fractional parts of a year; and confequently can never fix any fact or event nearer than about a twelvemonth before or after the time when it occurred. They reckon the ages of their children, their horfes, and dogs, in the fame manner. They give their dogs as many names as a German prince ; or more frequently call them by a whole fentence, as, Run-brik-you-catch-um-good, \&c. The Africans feak their refpective dialects, with fome mixture of broken Englifh. The language of the Creoles is bad Englifh, larded with the Guiney dialect, owing to their adopting the African words, in order to make themfelves underftood by the imported flaves; which they find much eafier than teaching thefe ftrangers to learn Englifh. The better fort are very fond of improving their language, by catching at any hard word that the Whites happen to let fall in their hearing; and they alter and mifapply it in a
xtrange manner; but a tolerable collection of them gives an air of knowledge and importance in the eyes of their brethren, which tickles their vanity, and makes them more affiduous in ftocking themfelves with this unintelligible jargon. The Negroes feem very fond of reduplications, to exprefs a greater or lefs quantity of any thing; as walky-walky, talky-talky, wafy-wafby, nappy-nappy, tie-tie, lilly-lilly, fum-fum: fo bug-a-bugs (wood-ants); dab-a-dab (an olio, made with maize, herrings, and pepper); bra-bra (another of their difhes) ; grande-grande (augmentative fize, or grandeur), and fo forth. In their converfation, they confound all the moods, tenfes, cafes, and conjugations, without mercy: for example; I furprize (for, I am furprized); me glad for fee you (pro, I am glad to fee you) ; bow you do (for, how d'ye do !) ; me tank you; me ver well; \&xc. This fort of gibberifh likewife infects many of the white Creoles, who learn it from their nurfes in infancy, and meet with much difficulty, as they advance in years, to thake it entirely off, and exprefs themfelves with correctnefs.

Many of the plantation Blacks call their children by the African name for the day of the week on which they are born; and thefe names are of two genders, male and female ; as for inftance:
\begin{tabular}{lll}

\section*{J A M A I C A.}

Some good perfons have exprefied their wifhes, that the plantation Negroes might be all converted to the Chriftian faith. The planters would be the laft to oppofe fuch a fcheme, if it were thought practicable; well knowing, that their becoming true Chrittians would work no change of property, and might poffibly amend their manners. But fev, if any, of the African natives will liften to any propofition tending to deprive them of their favourite fuperfitions and fenfual delights. The Portuguefe miffionaries at Congo, perceiving, upon experience, that a religion, inculcating rigid precepts of morality, felf-denial, honefty, and abftinence from women and drunkennefs, was not at all relifhed, contrived to form a medly of Paganifm and Chriftianity; which was more acceptable, and has gained them many converts, only the exterior ceremonies and facraments being indifenfably er:forced; while, in other refpects, they are left to the antient modes of their country. I have known fome Creole flaves defire to be baptized; but they had no other motive than to be prote?ted from the witchcraft of obeiah-men, or pretended forcerers; which affords a plain proof of the influence which fuperftition holds over their minds. But the mere ceremony of baptifm would no more make Chriftians of the Negroes, in the juft fenfe of the word, than a found drubbing would convert an illiterate faggot-maker into a regular phyfician. The Rev. Mr. Hughes fupports the fame opinion. "To bring them," fays he, "in general, to the know" ledge of the Chriftian religion is undoubtedly a great and good "defign, in the intention laudable, and in fpeculation eafy ; yet, I "believe, for reafons too tedious to be mentioned, that the diffi"culties attending it are, and I am afraid ever will be, infurmoun"table." This will appear lefs extraordinary, when we confider, that very few of the North-American Indians, who are far more civilized and enlightened people, have as yet been perfuaded to embrace Chriftianity, notwithftanding the inceffant and indefatigable labours of French and Englifh miffionaries for fo many years. Not many of thefe pious men have crowned their apoftefhip with any other iffue than by becoming enrolled in the honourable lift of martyrs. No perfuafion, I am induced to think, can wholly recall them from purfuing the favourite bias of their minds

\section*{BOOK III. CHAP. III.}
minds towards their prefent fyftem; which lays no penalty or penance on their fenfual pleafures, impofes no reftraint of decorum, and which tolerates their unlimited indulgence in thofe vices and delightful abfurdities which are exprefsly reprobated by the ChriAtian doctrines. The laws of Jamaica require the planters to do their utmoffor converting their Negroes, and caufing them to be baptized, fo foon as they can be put into a fit capacity of fentiment to admit of it. But their general inappetency to become converts, together with their barbarous fupidity, and ignorance of the Englifh language, which render them incapable of undertanding or reafoning upon what is faid to them, would foil the mof zealous endeavours. Befides, the planters are averfe to exert an authority and conftraint over their minds, which might wear the appearance of religious tyranny. They do not think the caufe of Chriftianity at all honoured by adding involuntary profelytes; they hold it rather for a fhameful hypocrify and infult to the true worfip. But, when any of their Negroes have made requeft to be baptized, I never knew, nor heard, of a planter's having refufed compliance with it. The Creole Negroes are the fitteft fubjects to work upon; and, with fome pains (as they have better knowledge of the Englifh rongue), they might probably be brought to retain fome of the elements of Chiftianity. It would certainly be productive of good confequences, if the more fenfible part of them were to be baptized, and occafionally inftructed, as far as they can be made to underfand, in the morality and fundamental points of our holy faith. In order to this, the baptifmal fees payable for Negroes ought to be fixed, by the juftices aud veftry in each parifh, at a very low rate; the prefent ordinary rate of 1 l. 3s. 9 d ., paid by the owners, being enormoufly high, A Popifh miffionary would perform the ceremony gratis, and be happy at the occafion; but, in fome other eftablifhments, we too often find, that it is, no fee, no holy water; no pay, no Swifs. Bofman hhrewdly obferves, "that, if it were "poffible to convert the African Negroes to Chrifianity, the "Roman Catholics would probably fucceed much better than any "other fect; becaufe they agree in fome points, fuch as abtinence " from particular kinds of food on certain days, \&cc. and in their "mutual attachment for ceremony and fuperfition." In fact,
the vulgar herd is much more affected by thofe things which frike the eye, than what are directed to the heart. Negroes are the apteft fubjects in the univerfe to be kept in fubordination and difcipline by the awful ceremonies, the indulgencies, injunctions, mummery, and legerdemain, of the Romifh church and its minifters. Hence it is, that, in the French fettlements, we find them as much, if not more, reftrained by the fuperftitions of that communion, than by the rigour of edicts and codes. I have feen many of them provided with ftore of crolfes, relicks, and confecrated annulets; to which they paid the moft fincere veneration, though wholly uninformed of any thing more than the efficacy of thefe baubles, the neceflity of adoring the Bleffed Virgin and a few chofen faints, the power of their prieft to abfolve fins, and the damnable ftate of all heretics. They had alfo acquired a Pater Nofter, a few Ave Maria's, and the right method of croffing themfelves, and counting their beads, morning and evening.

I doubt not but that, in the French churches belonging to their iflands, they have images of black faints, like the Portuguefe at Madeira, for the particular devotion of thefe poor wretches. Thefe arts our eftablifhed church difdains and ahhors, it being founded on the principles of reafon, and therefore adapted only to rational minds; which, by their own natural ftrength, are capable to judge of its rectitude, and embrace it on account of its purity and refinement from that very grofsinefs which pleafes, while it enflaves, other minds, that are clouded with ignorance. Next to the Romifh forms, perhaps thofe fyftems, which are fet off with abundance of enthufiaftic rant and gefticulation, would operate moft powerfully on the Negroes; fuch as Quakerifm, Methodifm, and the Moravian rites. The Romifh practices we find at leaft beneficial in the French iflands, co-operating with ftate-policy, and contributing ftrongly to maintain their flaves in peaceable fubjection. In our colonies, we are in want of fo potent a co-adjutor to our municipal laws; and, from this caufe, one fhould think, are more liable to be difturbed by infurrections, than the French iflands; to which end alfo another local difference would feem much to conduce. The Negroes in the foreign colonies are habituated to the fight of a defpotic frame of government, which controuls their matters

\section*{BOOK III. CHAP. III.}
mafters from higheft to loweft, and affimilates their condition nearer to that ftate of fervility under which they live themfelves. But, in our iflands, the word liberty is in every one's mouth; the affemblies refound with the clamour of, "liberty and property;" and it is echoed back, by all ranks and degrees, in full chorus. The Whites are nearly on a level; and the loweft can find the way of bringing the higheft to public juftice for any injury or oppreffion. The Negroes here grow habitually familiar with the term; and have that object ever obvious to their fight, which is wholly withheld from, or at leaft but dimly feen by, the French Blacks. To the fame effect is the remark of Montefquieu: "The multitude "of flaves has different effects in different governments. It is no "grievance in a defpotic ftate, where the political flavery of the " whole body takes away the fenfe of civil flavery. Thofe, who " are called freemen, are in reality little more fo than they who "do not come within that clafs. This makes it therefore a matter "of indifference, whether, in fuch fates, the flaves be few or nu" merous. But, in moderate ftates, it is a point of the higheft im" portance, that there fhould not be a great number of flaves. The " political liberty of thofe fates adds to the value of civil liberty; ". and he, who is deprived of the latter, is deprived alfo of the for"mer. He fees the happinefs of a fociety, of which he is not fo " much as a member: he fees the fecurity of others fenced in by " laws; himfelf, without any protection: he fees his mafter has a "foul which can enlarge itfelf; while his own is conftrained to "fubmit to a continual depreffion. Nothing more affimilates a " man to a beaft, than living among freemen; himfelf a flave. "Such people as thefe are the natural enemies of the fociety; and ow their number muft be dangerous. It is not therefore to be won"dered at, that moderate governments have been fo frequently di" fturbed by revolts of flaves; and that this fo feldom happens in "defpotic ftates!"

It has been a matter of furprize to fome, that the Negroes in our colonies do not increafe in that natural proportion which is obferved among mankind in other countries, and to a remarkable degree among the Blacks of Afric. Some writers, perceiving the large and continual importations made every year, and which are

\section*{J A M A I C A.}
found expedient for the carrying on our plantations in thefe parts, attribute this wafte to the too fevere labour and oppreffion they are forced to undergo. But this is an erroneous conjecture : the authors, not having refided in thefe colonies, were not fufficiently informed, to attend to other caufes, which prove more deftructive than the fevereft toif; nor to thofe which throw impediments in the way of a regular propagation.

It was computed formerly, that fix new Negroes were required annually to every hundred, to keep up the ftock in Barbadoes. The prefent import at Jamaica does not exceed, upon an average, fix thonfand per annum; which is about the rate of four to one hundred.

In the year 176r, when a draught of two thoufand Negroes was made here, to be fent on the Havannah fervice, the whole number of flaves in the ifland, according to the accouit then taken,

\section*{was}

I do not exactly know the number that returned from that expedition. Several deferted, and fome were killed; but I fuppofe the non-returned, from the beft enquiry I can make, amounted to about eight hundred; which, being deducted from the above total, there remained about - 146000 In 1768, by an account taken, there were found - - 166904

So that the whole ftock was augmented, in feven years, 20904 "The import, at the average of 6000 per ann. [x], was From which deducting the augmentation,
"There appears a dead lofs of which is equal to about 3000 per annumz; and, at \(35 \%\). fterling per head, makes 105000 \% annual lofs in value; a moft aftonifhing fum! Upon moft of the old fettled eftates in this ifland, the number of births and deaths every year is pretty equal, except any malignant diforder happens. The deaths, which conftitute the
\([x]\) I have put the average at 6000 , though perhaps it is too fmall a number, confidering the brifknefs of the African trade during part of the time, and that a great many French Negroes were brought in from the conquered iflands. The average for fome of the years in this feries was 9000 ; but others fell fhort. In the prefent computation, the greater the average is proved to have bcen, the higher mult the lofs appearo But I have chofen rather to be under than over.

\section*{BOOK III. CHAP. III.} major part of the above anmal balance, are of native Africans. Hence therefore appears the miftake of the writers before-mentioned; for it is well known, that thefe new Negroes are always much indulged during the firft two or three years after their arrival, being put to the gentleft work, that they may be gradually feafoned to the change of climate, and trained by a flow and eafy progrefs to undergo the fame degree of labour as the reft. If then all this care and preparation be neceffary, and not only neceffary, but actually attended to, it may be afked, by what means it comes to pafs, that we obferve fo great a decreafe among them? In reply to this, feveral reafons may be given.

Thefe Negroes are few of them exempt from a venereal taint ; and very many have, at the time of their arrival, that dreadful diforder, the yares, lurking in their blood. It is faid (I know not with what truth), that the furgeons on board the Guiney fhips ufe methods to repel it, by a mixture of iron-ruft with gun-powder and lime-juice, in order to remove all external fymptoms of it before they are expofed to fale. There is fome reafon for believing that fuch wicked frauds have been practifed; becaufe it is no uncommon thing to fee a whole parcel of new Negroes, within a few weeks after they are brought on a plantation, break out all together with this diforder, and efpecially if they have drunk the cane-liquor in the boiling-houfe, which is very efficacious in throwing the venom out of the habit.

The plantation furgeons have depended chiefly on mercurial preparations for a cure; but it is found, that fuch medicines break and impoverifh their blood, and fubject them to catch violent colds, which often ftrike the matter in upon the nobler parts, and bring on the joint-evil. Sometimes they fall into dropfies, which generally prove mortal; for this diforder requires a very nutritious diet; and experience proves, that, when left to nature, and the ufe of flour of brimftone, to keep the humour in a conftant elimination towards the fkin, it gradually wears off in about three years. Mercurials interrupt this natural crifis, and, inftead of curing, generally either fix the diforder more rootedly in the habit, or give rife to others of the moft dangerous kind.

Vol. II.

1 have

\section*{J A M A I C A.}

I have had occafion, in the courfe of feveral years, to mark the fate of many hundred new Negroes; and am pofitive, that a third part of them have perifhed, within three years after their arrival, by this difeafe, through a miftaken method of treating it, and the too eager defire of their owners, or an affectation of extraordinary fkill in their doctors, to make a fpeedy cure of it by forne mercurial noftrum. Another miftake has arifen, by judging from the appearance of an acrimonious humour, fo copioully difcharged, that the patients required to have their juices corrected by proper fweeteners of the blood, and a low, abfemious diet. This error has but ferved to haften their death. Inftead of oatmeal gruel, and fuch weakening meffes, they ought to have their ftrength fuftained, during the progrefs of the eruption, and whilft it continues, with hearty food, nourihhing broths, and the like; which preferve the blood in a ballamic, vigorous ftate, and enable nature to throw out the latent virus. This diftemper, there is reafon to believe, holds a near affinity with the finall-pox; at leaft, it has been remarked, that the natural finall-pox, in thofe afflicted with the yaws, is commonly very mild.

Mercury has, in this climate, a great propenfity to falivate; and moft of the Negroes, by frequently taking mercurials for venereal complaints, have their fluids fo impregnated with them, that the utmoft caution is neceffary in adminiftering fuch medicines. For this reafon too, they cannot bear frequent repetitions of frong purgatives; the confequence of fuch copious evacuations being, almoft always, a tendency to a dropfy.

The fmall-pox has frequently made great ravage among them. Sometimes they have been landed with this difeafe upon them; and this has proved fo fatal, that I have known feven in ten die of it, which is equal to feventy in a hundred, or fifty-fix more than the computation made of thofe who die in England by this diforder taken in the natural way. The late method of inoculation, happily practifed in this ifland, promifes fair to put an end to fuch dreadful examples of mortality; and I therefore only mention this, as one principal fource of depopulation which exitted here before inoculation was brought into general ufe, which was not long ago.

\section*{BOOK III. CHAP. III.}

The removal of Negroes from a dry to a damp fituation, from a South fide to a North fide parifh, has often been fatal to many. New Negroes, fent into the mountains immediately after their importation, efpecially during a wet feafon, are almoft fure of being afflited with fevere colds, pleurifies, fluxes, and other diftempers, which prove their bane. Even the Creoles do not bear thefe removals from places where, perhaps, they have refided from the time of their birth. And it is inconceivable what numbers have perifhed, in confequence of the law for recovery of debts; which permits Negroes to be levied on, and fold at vendue. By this means, they are frequently torn from their native fpot, their deareft connexions, and transferred into a fituation unadapted to their health, labouring under difcontent, which co-operates with change of place and circumftances to fhorten their lives.

Some planters think it good policy to quarter their new Negroes among the old fettled ones: but thefe hofts generally make their guefts pay dear for their lodging and maintenance, forcing them to be their "hewers of wood, and drawers of water ;" and, in thort, impofing on their ignorance without meafure or mercy, until they fink under the oppreffion; whilf the owner, a ftranger to what paffes, is furprifed to fee them continually on the decline, and gradually confuming, without any furpicion of the real caufe.

The introduction of too many recruits at once has fometimes proved fatal to them. It is very evident, that a fimall number can be much eafier and better provided for, lodged, fed, and taken care of, than a multitude. The planter therefore, who buys only eight or ten at a time, will in the end derive more advantage from them, than the planter who buys thirty; for, by the greater leifure and attention in his power to beftow upon them, he will greatly leffen the ordinary chances againft their life, and the fooner prepare them for an effectual courfe of labour. The comparifon, indeed, founded upon fact and obfervation, is, that, at the end of three years, the former may poffibly have loft one fifth, but the other will moft probably have loft one half, of their refpective numbers.
The women do not breed here as in Africa; for, in fhort, it has never been the planter's care to proportion the number of females to males: upon fome eftates there are five men to one
woman. Now, the population of Afric, as has been hewn, is partly imputable to their larger proportion of women; infamuch that, although the greateft man among their provinces may have fifty, fixty, or more wives or concubines, yet the meaneft man is fure of one at leaft. The women here are, in general, common proflitutes; and many of them take fpecifics to caufe abortion, in order that they may continue their trade without lofs of time, or hindrance of bufinefs; and, befides, their admitting fuch promifcuous embraces muft neceflarily hinder, or deftroy, conception. We may add to this the venereal difeafe; which, together with the medicines taken, either to repel, or carry off the virus, frequently kills the fretus, and fterilizes both men and women.
Worms are extremely fatal to children in this climate, and deFtroy more thau any other difeafe. Others frequently perifh, withim nine or ten days of their birth, by what is. called here jaw--falling; which is caufed by a retention of the meconiun: by not keeping the infant fufficiently warm; or by giving it rum, and aliment of hard digeftion.
Moft of the black women are very fubjeet to obffructions; from what caufe I will not prefume to fay; but, perhaps, they may be afcribed, in part, to their ufing reftringent baths, or wafhing themfelves in cool water at improper periods. Child-birth is not fo eafy here as in Afric; and many children are annually deftroyed, as well as their mothers, by the unfkilfulnefs and abfurd management of the Negroe midwives.
Thus we find here are various caufes which prevent the multiplication of Negroes on the plantations; not but that unfeafonable work may fometimes be added to the lift; yet, in general, as it is happy for thefe people, that the planter's intereft concurs with the obligations of humanity in moft cafes that relate to the care of them; fo it is unneceflary to fay, that in the time of geffation, they are treated with more than common indulgence, to prevent any fuch accidents.
The know ledge of the caufe of any difeare conducts us to the method of cure. To augment our Negroes therefore by procreation, we muft endeavour to remedy thofe evils which impede or fruftrate its natural effect. And, to conclude, if the wafte of thefe men

\section*{BOOK III. CHAP. III.}
thould become lefs, the price of them would fall; and the fame annual demand might be kept up, by extending our plantations, which is now produced by the mortality of thefe people; eftates would be gradually well-focked, and rendered more flourifhing ; and the circumftances of the planters totally clanged for the better. The purchafe of new Negroes is the moft chargeable article attending thefe eftates, and the true fource of the diftreffes under which their owners fuffer; for they involve themfelves fo deeply in debt, to make thefe inconfiderate purchafes, and lofe fo many by difeafe, or other means in the feafoning, that they become unable to make good their engagements, are plunged in law-fuits and anxiety; while, for want of fome prudent regulations in the right hufbanding of their flock, and promoting its increafe by natural means, they entail upon themfelves a neceffity of drawing perpetual recruits of unfealoned Africans, the expence of which forms only a frew addition to their debts and difficuities.
I will not deny that thofe Negroes breed the beft, whofe labour is leaft, or eafieft. Thus the domeftic Negroes have more children, in proportion, than thofe on penis; and the latter, than thofe who are employed on fugar-plantations. If the number of hogheads, annually made from any eftate, exceeds, or even equals, the whole aggregate of Negroes employed upon it, but few children will be brought up on fuch eftate, whatever number may be bown; for the mothers will not have futficient time to take due care of them; and, if they are put under charge of fome elderly woman, or nurfe, as the cuftom is in many places, it cannot be fuppofed that they mect with the fame tendernefs as might be expected from their parent. But, where the proportion of the annual produce is about half a hogthead for every Negroe, there they will, in all likelihood, increafe very rapidly; and not much lefs fo, where the ratio is of two hogtheads to every three Negroes, which I take ta be a good mefne proportion ; agreeably to which, an eftate, making, communibus annis, two hundred hoghtheads, ought to mufter on its lift, old and young, three hundred Negroes; and, if it makes three hundred hogheads, four hundred and fifty fuch Negroes: and fo on. An eftate, fo handed, may not only, cateris paribus, fave the expence of buying recruits, but may every ycar afford fome addition to the
\(43^{8} \quad\) J A M A I C. A.
firf number, of which I have known inconteftable examples in Jamaich; and although the nature of the foil here and there may caufe fome difference in refped to hard or eafy labour, yet it will ttill hold for a good general rule. There are very few plantations, whofe foil is uniform throughout; and, where the foil is moft fiff and laborious, perhaps the yielding in fugar is equal on the whole; which works no objection to the rule. For cxample: if we fuppofe a North fide eftate of very ftiff land, and compare it with one on the South fide, whofe foil is of a free testure, and that each of them yields, upon average, one hog thead per acre round; the South fide eftate contains three hundred acres in canes, yields three hundred hogfheads, mufters four hundred and fifty Negroes; and the North fide eftate, three hundred acres, yields three hundred hogtheads, and mufters four hundred and fifty Negroes. Although the North fide land is far more laborious, yet the annual plant being far lefs, on account of the rattoon canes, which ftand feveral cuttings, the mefine proportion of labour upon both, for a given number of years, may be found very even; the South fide eftate being obliged, perhaps every year, to hole and plant double the quantity of ground.

The proportion, according to the before-mentioned rule, is one hundred and fifty Negroes to one hundred hogtheads. An eftimate was made, not long fince, on this fubject, with reference to the produce of each diftinct parifh. I know not how far it may be depended on in regard to exactnefs; but, if it comes any thing near the truth, it proves that fome have more, but very few lefs, than the rate propofed. For better comprehending the table, I ihall clafs the different parifhes according to the general condition of their foils. The firft clafs contains thofe whofe foil is, comparatively, the moft ftiff and heavy; the fecond, fuch as have the lighteft; the third, thofe whofe foil may be efteemed between both.

Firft Clafs. Negroes to 100 Hhds.
\begin{tabular}{|c|c|c|c|c|}

Thus, of the whole number, only fix appear deficient. I muft own, that fuch general calculations are not entirely to be relied on; becaure, in any individual parifh, upon a furvey of the eftates comprehended in it, fome will appear to have more than their complement, and others to fall very fhort of it. Much likewife depends on favourable or unfavourable feafons, good or bad management. In regard to births, they are probably as many as can be expected, under the obftacles which I have before enumerated; and, when I fay that any eftate, having the juft proportion of hands to the average quantity of its produce, may require no purchafed recruits, I munt be underftood with an exception to fome or other of thofe obftacles; for, if its women are not numerous enough, or if they are rendered unprolific by difeafe or their own bad pracs tices, or their children precluded from reaching to maturity, no fuch population can of courfe enfue. It is worth every planter's attention, to encourage the mothers, by little helps, to take good care of their children. Some mark of diftinction, or a reward, fhould always be allowed to thofe who have fhewn the moft affiduity inn refpect to their cleanlinefs and health. A premium might be affigned for every new-born child; and a finall annuity to be con-
tinued until its attaining the fourth or fifth year. There politic gratuities would not only endear the owner to the parents, but prove a conftant incitement to their care, and at the fame time thable them to provide better, the feveral little neceffaries wanted to kecp their infants cleanly and decent. If thefe meafures fhould operate, as probably they would, to the increafe of their families, the expence attending them would be amply repaid.

I have obferved, in feveral accounts of our Weft-India colonies, comparifons drawn between the condition of the flaves in them and in the French iflands, very much to the difadvantage of the former. It is faid, that the Negroes in the French colonies are not left fo much to the planter's difcretion; that their mafters are obliged to have them inftructed in the principles of the Chriftian religion; that there are methods taken, at once to protect them from the cruelty of their mafters, and preferve the colony from any ill effects that might arife from treating them with a lenity not confiftent with their condition ; that the Code Noir, or fet of regulations, purpofely framed for the Negroes, and eftablifhed by the royal edict, as well as other ordinances relative to thefe poor creatures, fhew a very juft and fenfible mixture of humanity and fteadinefs; and that thefe regulations have given the French, in their colonies, a reputation for good difcipline and clemency; which degrades the Englifh planters, when their laws are brought into comparifon. The Fench are thus held out as a pattern well deferving the imitation of the Britinh owners, and very properly, if all thefe encomiums are founded in truth. But there is fome reafon to doubt their good effects; and to believe, that, however they may glow with humanity and maxims of prudence, they are not efficacioufly obeyed. Monf. Boffu, a French officer, who was at Hifpaniola in 1751, gives fome right to draw fuch a conclufion; and I muft fay, that his teftimony is of the greater weight, as the French are well known to be very cautious of revealing whatever can tend to difhonour their countrymen. He condemns the brutal avidity of fome French planters; "who," he tells us, "force their sc wretched flaves to fuch hard labour, that they refufe to marry, in st order to avoid generating a race of beings to be enflaved to fuch s' mafters, who treat them, when old and infirm, worfe than their
"dogs and horfes. I have feen, adds he, a planter, whofe name
"was Chaperon, who forced one of his Negroes to go into a heated
" oven, where the poor wretch expired; and his jaws being fhri" veled up, the barbarous owner faid, "I believe the fellow " laughs," and took a poker to ftir him up. Since this event, he " became the fearecrow among all the flaves, who, when they do " amils, are threatened by their mafters to be fent to Chaperon." What are we to think of the edicts and ordinances of any country, where fo horrid a monfter is fuffered to live with impunity; and of how little efficacy is the celebrated Code Nair, in giving protection to the French Negroes? Such acts of wanton, diabolical cruelty, are a ftanding reproach to the laws of any country; the fact might have feemed incredible, had it been related by any other than a Frenchman ; and, I think, we are fairly warranted to judge from it, that what we have been told of their regulations is not entirely true; for how does it appear that their Negroes are protected from the cruelty of their mafters, whilft fuch atrocious ex. amples of the contrary are to be feen in their colonies? This queftion is impartially deduced, and proves, that fo far as refpects the perfonal well-being of the Negroes, thefe boafted laws are fpecious perhaps in their complexion, but ineffectual and feeble in their real operation. It is not enough to make laws; it is alfo neceffary to provide for their execution.

However, we are fo fond of depreciating our own colonies, that we paint our planters in the moft bloody colours, and reprefent their flaves as the moft ill-treated and miferable of mankind. It is no wonder therefore that Jamaica comes in for a large fhare of abufe; and even our common news papers are made the vehicles of it. I read in one of them not long fince, "that the cruel ufage " inflicted on Negro flaves in Jamaica by their mafters, is the "reafon why infurrections there are more frequent than in the "French or other fugar-iflands." The firf enquiry to be made in anfwer to fo invidious a charge is, whether the fact here afferted be really true? and, 2dly, whether this frequency may not have been owing to fome other caufe?

Vol. II.
L 11
Within

Within a few years paft, we have heard of them at Hifpaniola, at Cuba, at the Brafils, at Surinam, and Berbice, and at the Britifh iflands of Tobago, Dominica, Montferrat, and St. Vincent. If they fhould happen oftener at Jamaica than in the fmaller iflands, it would not be at all furprizing, fince it has generally contained more Negroes than all the Windward Britifh iffes put together; and its importations in fome years have been very great.
For inftance, in the year 1764 , the importation was, 10,223 . And from January 1765 to July 1766 , one year and an half, 16,760 . So large a multitude as 27,000 introduced in the fpace of two years and an half, furnihes a very fufficient reafon, if there was no other, to account for mutinies and plots, efpecially as no fmall number of them had been warriors in Afric, or criminals; and all of them as favage and uncivilized as the beafts of prey that roam through the African forefts.
A general accufation can only deferve a general reply. If the author of it had particularized any certain fpecies of barbarity tolerated by law or cuftom, or in conftant ufe at Jamaica, it would be incumbent on its advocates, either to difprove, or admit, the exiftence of fuch particular facts. But a charge, which involves a whole country, ought to be well founded, and fupported by evidence taken from notorious practice, or the fyftem of laws by which that country is regulated. If a foreigner, being told of a mother in England, fo void of natural feeling, as to fhut up her own children in a dungeon, ftarve and cruelly beat them; of others, who ftrangle their infants, cut their throats, or confume them in ovens; of mafters and miffrefles fo brutal as to whip their apprentices to death; of daughters poifoning their fathers; nieces their uncles; wives butchering their hufbands, and hufbands their wives; with many other examples of barbarity, which the public chronicles have recorded from time to time; fhould we not think the foreigner extremely void of impartiality and good fenfe, if fur this reafon he was to charge all the people of England with being a moft bloody, inhuman and unfeeling race? Yet there is full as much caufe for it in this cafe, as in the former. The truth is, that ever fince the introduction of Africans into the Wert-Indies, infurrections
infurrections have occurred in every one of the colonies, Britihh as well as foreign, at times. But the calumniator has not been more erroneous in bringing the charge, than in the reafons affigned to fupport it; becaufe a faulty indulgence has been one leading caufe of the difturbances that have occurred in Jamaica; which is evidently proved by what is fet forth in many of the laws pafied in confequence of them, reftricting feveral fports, and prohibiting certain feftive affemblies, which the Negroes had freely enjoyed before, but were made fubfervient to the forming and carrying on of dangerous confpiracies. They were formerly allowed to affemble with drums and mufical inftruments; to dance, drink, and be merry. This was permitted, becaufe it was thought an inoffenfive mode of recreation for them. But when thefe games were afterwards converted into plots, they were with great juftice fuppreffed, as riotous affemblies of people are in England, and for the like reafon; that, being perverted from their original intention to wicked and unlawful ends, they became inconfiftent with the peace and fafety of the community. Such prohibitions (of which there are feveral) prove undeniably, the great latitude of indulgence, that has been given to the Negroes of this colony; and fhew the propriety, and indeed neceflity, there has been of laying them under reftrictions, when that liberty was abufed. The innocent, it is true, were unavoidably involved with the guilty in thefe reitraints; but they have ftill fufficient paftimes and amufements to divert them, without offending againtt the public welfare. In every country under the fun the like commotions muft happen, where licentioufnefs among the moft ignorant and profigate of the people is not repreffed by the difcipline of laws, and the energy of good government; and where drunkennefs and luft, thofe great incentives to violence among this order of men, are fuffered, as in Jamaica, to reign without controul.
The heedlefs practice formerly of keeping large flands of firearms and cutlaffes upon the inland plantations, having only three or four white men upon them, became a ftrong temptation to any difaffected or enterprizing Africans. It might well be expected, that throwing fuch magazines and fores of ammunition in their way, was a direct invitation to them to rebel. The turning fo
many indefenfible houfes into arfenals for arming mutinous favages, was doubtlefs the very height of imprudence, tending not only to generate projects of hoftility, but to afford the means of conducting them with probable hope of fuccefs. Add to this, that many thopkeepers, from a ftrange fpirit of avarice, have been known to fell gunpowder privately to fuch conipirators, although they muft have forefeen the ufe to which it might be applied; and, to gain a few fhillings, even hazarded their own deftruction; incredible as this may feem, yet it is certain that fuch a practice has been carried on, as two laws were pafied, one in 1730 , the other in 1744, to put a ftop to it.

Another caufe of confpiracy may have been, a remote hope of fome Negroes, who, having heard of the freedom granted to the Marons after their obftinate refiftance of feveral years, expected, perhaps, that by a courfe of fuccefsful oppofition they might obtain the like terms in the end, and a diftinct fettlement in fome quarter of the ifland.

The vulgar opinion in England confounds all the Blacks in one clafe, and fuppofes them equally prompt for rebellion; an opinion that is groflly erroneous. The Negroes, who have been chief actors in the feditions and mutinies, which at different times have broke out here, were the imported Africans; and, confidering the numbers of them who were banifhed their country for atrocious mifdeeds, and familiarized to blood, maffacre, and the moft deteftable vices, we fhould not be aftonifhed at the impatient firit of fuch an abandoned herd, upon being introduced to a life of labour and regularity. The numbers imported would indeed be formidable, if they continued in a body; but they are foon difperfed among a variety of different eftates many miles afunder, by which means they remain a long time ignerant of each other's place of fettlement. They often find themfelves mixed with many Atrangers, differing from them in language; and againft others they hold a rooted antipathy. But they are chiefly awed into fubjection, by the fuperior multitude of Creok Blacks, with whom they dare not confederate, nor folicit their concurrence in any plan of oppofition to the white inhabitants.

The ringleaders of confpiracy have been the native Africans, and of thefe the Coromantins ftand the foremoft. The Jamaica planters are fond of purchafing the Negroes who pafs under this name, in preference to thofe of the other provinces; but the French, and fome other Weft-India colonies, will not knowingly admit them; being fenfible of their dangerous tempers and unfitnefs for the peaceable walk of hufbandry.

As the infurrections which have happened in our illand have been mifreprefented, I fhall give a fummary account of them, which may ferve to illuftrate what has been advanced, and explain the motives of them not to have been founded in the manner they havebeen generally fuppofed, by perfons ill informed, or but little acquainted with Jamaica.

The Maron or wild Negroes, of whom I have given the hiftory, were improperly called rebellious. The compilers of the Modern Univerfal Hifbory, in their account of the illand, have fallen into this miftake, and, giving a detail of the infurrection that happened in \({ }^{1} 76\) I, they fpeak of it as "a revolt of thofe Negroes, who, fince the " late treaty with them in Mr. Trelawny's government, not baving. "been-Jufficiently watched, had become fo numerous and Atrong, that "s they now meditated no lefs than the extirpation of all the white " men in the ifland."

It is not an eafy matter to difcover what is meant by "their be"coming too numerous and ftrong, for want of being watched;" nor how the watching of them could either thin their numbers, or weaken them; however, the whole is erroneous, and the very reverfe is the truth; for thefe Negroes have, as far as we have any certain information, always adhered to the treaty, and were the principal inftruments employed in fuppreffing that very infurrection. The Jamaica laws have from the beginning termed them rebellious; hut they did not deferve the appellation, becaufe they were the free defcendants from the aboriginal Spanifh Negroes, who had never come under any fubmiffion or allegiance to the Britifh government. The rebellions (properly fpeaking) are confined to thofe Negroe - flaves, who have at different periods renounced obedience to their Britifh mafters, and fought to refcue themfelves from a life of labour by force of arms; and all thefe difturbances are extremely remarkable, in that they have been planned and conducted by the:

\section*{J A M A I C A.}

Coromantin Negroes, who are diftinguifhed from their brethren by their averfion to hufbandry, and the martial ferocity of their difpofition. The firft rebellion of importance, on record, happened in the year 1690 , when between three and four hundred flaves, belonging to Mr . Sutton's plantation in Clarendon, forced their way into the dwelling-houfe, killed the white man entrufted with the care of it, and feized upon a large ftore of fire-arms, powder and ball, and four fimall field-pieces, with fome provifions: at this time, the interior fettlements, of which this was one, fituated near the woods, were furnithed in this manner with implements of defence to withftand the affaults of the Marons, who frequently fallied out in the night to attack them. The rebels, after this exploit, proceeded to the next plantation, and murdered the overfeer, but were difappointed of being joined by the flaves belonging to it, who all betook themfelves to the woods; upon this they returned to Mr. Sutton's houfe, where they put every thing into a pofture of defence. By this time the white inhabitants of the neighbourhood, having taken the alarm, collected about fifty horfe and foot, marched to beat up their quarters; and, being joined by the way with frefh fuccours, they increafed to a formidable body. On the next day the militia began their attack, upon which the rebels withdrew to the cane pieces, and fet fire to them, in order to cover their retreat; but a detachment of the militia having fetched a little compars, found means to affault them in flank, whilf the reft advanced upon them in front; unable to witbfend this double fire, the rebels immediately fled, but were fo brifkly purfued, that many were killed, and two hundred of them threw down their arms, and begged for mercy; the reft were afterwards either flain, or taken prifoners; and the ringleaders of the confpiracy hanged. I find no rebellion of any confequence for feveral years fubfequent to this; one reafon for which ceffation probably was, that the Marons were endeavouring, by every means in their power, to bring over the flaves in different parts of the illand to their caufe; fuch therefore as were difcontented with their condition, deferted to the Marons; but, feveral who took this ftep, performed fome previous act of outrage, by way of recommending themfelves to their new friends; none was more horrid than what was committed on Mr.

\section*{BOOK III. CHAP. III.}

B - of St. Anne; a gentleman diftinguifhed for his humanity towards his flaves, and in particular to one of his domeftics, on whom he had beftowed many extraordinary marks of kindnefs. Yet this ungrateful villain, at the head of a gang who were equally difpofed to revolt, affaulted his mafter whilft he was in bed; Mr. Bdefended himfelf for fome time with his broad fword, but being overpowered by numbers, and difabled by wounds, he fell at length a victim to their cruelty; they cut off his head, fawed his fkull afunder, and made ufe of it as a punch-bowl; and, after doing as much further mifchief as they were able, they retreated into the woods.

After the pacification made with governor Trelawney, no infurrection of moment occurred for many years. Some trifling difturbances happened, and fome plots were detected, but they came to nothing; and indeed the feeds of rebellion were in a great meafure rendered abortive, by the activity of the Marons, who fcoured the woods, and apprehended all ftraggling and vagabond flaves, that from time to time deferted from their owners. But in the year 1760 , a confpiracy' was projected, and conducted with fuch profound fecrefy, that almoft all the Coromantin flaves throughout the ifland were privy to it, without any fufpicion from the Whites. The parifh of St. Mary was fixed upon, as the moft proper theatre for opening their tragedy. It abounded with their countrymen, was but thinly peopled with Whites, contained extenfive deep woods, and plenty of provifons: fo that as the engaging any confiderable number heartily in the foheme, would depend chiefly on the fuccefs of their firft operations, they were likely to meet with a fainter refiftance in this parifh than in moft others; and hould the iffue of the conflict prove unfavourable to them, they might retreat with fecurity into the woods, and there continue well fupplied with provifions, until their party fhould be ftrengthened with fufficient reinforcements, to enable their profecution of the grand enterprize, whofe object was no other than the entire extirpation of the white inhabitants; the enflaving of all. fuch Negroes as might refufe to join them; and the partition of the illand into fmall principalities in the African mode; to be diftributed among their leaders and head men. A principal in-
ducement to the formation of this fcheme of conqueft was, the happy circumftance of the Marons; who, they obferved, had acquired very comfortable fettlements, and a life of freedom and eafe, by dint of their prowefs. On the night preceding Eafter-Monday, about fifty of them marched to Port Maria, where they murdered the ftorekeeper of the fort (at that time unprovided with a garrifon), broke open the magazine, and feized four barrels of powder, a few mulquet-balls, and about forty fire-arms. Proceeding from thence to the bay, which lies under the fort, they met with fome filhing-nets, from which they cut off all the leaden finkers, made of bullets drilled. Thefe Negroes were moftly collected from Trinity plantation, belonging to Mr. Bayley; Whitehall, and Frontier, belonging to Mr. Ballard Beckford; and Heywood Hall, the property of Mr. Heywood. Mr. Bayley had been called up by one of his domeftics, and, mounting his horfe, rode towards the bay, in hopes that, by expoftulating calmly with the rebels, he might perfuade them to difperfe and return to their duty; but their plan was too deeply laid, and they,had conceived too high an opinion of it, to recede.

Upon his nearer approach, he perceived they were determined to act offenfively, and therefore galloped back with great expedition ; a few random-fhots were difcharged after him, which he fortunately efcaped, and rode directly to the neighbouring eftates, alarming them as he went, and appointing a place of rendezvous. In this be performed a very eflential piece of fervice to the white inhabitants, who before were entire ftrangers to the infurrection, and unprepared againft furprize ; but this notice gave them fome time to recollect themfelves, and to confult meafures for fuppreffing the infurgents. In the mean while, the latter purfued their way to Heywood-Hall, where they fet fire to the works and cane-pieces, and proceeded to Efher, an eftate of Mr. William Beckford, murthering on the road a poor white man, who was traveling on foot. At Efher they were joined by fourteen or fifteen of their countrymen. The Whites on that eftate had but juft time to fhut themfelves up in the dwelling-houfe, which they barricadoed as well as they could; unhappily they were deftitute of ammunition, and therefore incapable of making any refiftance. The rebels, who knew

\section*{BOOK III. CHAP. III.}
their fituation, foon forced an entrance, murthered the overfeer and another perfon, and mangled the doctor, till they fuppofed him dead; in this condition they drew him down feveral fteps by the heels, and threw him among the other murthered perfons: his limbs fili appearing to move, one of the rebels exclaimed, that " he had as many lives as a pufs;" and immediately difcharged four or five flags through his back, fome of which penetrated the bladder. This gentleman was fo dreadfully wounded, that the two furgeons, who afterwards attended him, were every day fatigued with the multiplicity of bandages and dreffings, neceffary to be applied upon almoft all parts of his body; fo that his recovery was next to miraculous.

After this exploit, they ravifhed a Mulatto woman, who had been the overfeer's kept miftrefs; but fpared her life, at the requeft of fome of the Efher Negroes, who alledged, in her favour, that the had frequently faved them from a whipping, by her interceffion with the overfeer; confidering the hands into which the had fallen, this was thought an act of very extraordinary clemency ; and, in fact, not owing really to any merit on her part, as the overfeer had only chofe to let his forgivenefs appear rather to come through the importunity of another, than from the lenity of his own difpofition. The doctor, notwithftanding his wounds, recovered afterwards. Yankee, a trufty flave belonging to this eftate, behaved on the occafion with fignal gallan. try; he was very active in endeavouring to defend the houfe, and affift the white men; but, finding they were overpowered, he made his efcape to the next eftate, and there, with another faithful Negroe, concerted meafures for giving immediate notice to all the plantations in the neighbourhood, and procuring auxiliaries for the white inhabitants. The rebels, after this action, turned back to Heywood Hall and Baldard's Valley, where they picked up fome fref recruits, fo that their whole party, including women, increafed to about four hundred. The fatigues of the opening their campaign had fo exhaufted their firits by this time, that they thought proper to refrefh themfelves a little before they renewed their hoffilities; having therefore a good magazine of hogs, poultry, rum, and other plunder of the like kind, they chofe out a convenient fpot, furrounded with trees, and a little retired from the road, where they fread their provifion, and began to carouze. The white inhabitants, alarmed by Mr . Bayley, had affembled in the mean Vol. II.

\section*{450}

\section*{J A M A I C A.}
time about 70 or 80 horfe, and had now a fair opportunity of routing the whole body; they advanced towards the place where the rebels were enjoying themfelves, and luckily difovered them by their noife and riot, or they might have fallen into an ambufcade. The Coromantins did not exhibit any fpecimen of generalhip upon this occafion; on the appearance of the troop, they kept clofe in the wood, from whence they poured an irregular fire, which did no execution. The drilled bullets, taken from the fifhing nets, defcribed an arch in their projection, and flew over the heads of the militia. After keeping their ranks for fome time, it was propofed that they fhould difmount, and pufh into the wood; but on examining their ammunition, the militia found their whole ftock, if equally divided, did not amount to more than one charge each man; they therefore held it more advifeable, for the major part to ftand their ground on the referve, while their fervants, and fome others well armed, advanced into the wood clofe to the rebels, feveral of whom they killed; a Mulatto man was faid to have flain three with his own hand, and a brave North Briton about the fame number. The rebels, intimidated with this bold attack, retreated; but it was not judged proper at that time to purfue them.

During all thofe tranfactions, tivo Negroes, belonging to Mr. Beckford, having taken horfe at the firft alarm, were on the road to Spanifh Town, and traveled with fuch expedition through very bad ways, that they brought the intelligence to lieut. governor Sir Henry Moore, by one o'clock the fame day, who immeaiately difpatched two parties of regulars, and two troops of horfe militia, by different routs, to the parifh; orders at the fame time were fent to the Marons of Scot'sHall Town, to advance by another road from the Eaftward, and a party from the Leeward Towns were directed to enter by the Weft. All thefe detachments were in motion as early as poffible, and no meafures could have been more effectually taken. The lieutenant governor happily poffeffed, in addition to great abilities, uncommon prefence of mind, prudence, and bravery, a mof confummate knowledge of the geography of the ifland, and of every road and avenue in its feveral diftricts. By this means, he was enabled to take every fit precantion, and form the moft proper difpotition of the forces, as well for reducing the infurgents, as proteciing the eftates in thofe parts,
where the flame might be expected to kindle afrefh. Thefe detachments, by forced marches, foon made their appearance in St. Mary, and damped at once all the ideas of conqueft, which at firit bad elevated the rebels. They kept in the woods, rambling from place to place, feldom continuing many hours on one fpot; and when they perceived themfelves clofe befet on all fides, they refolved to fell their lives as dear as poffible. The Marons of Scot's-Hall behaved extremely ill at this juncture; they were the firft party that came to the rendezvous; and, under pretence that fome arrears were due to them, and that they had not been regularly paid their head-money allowed by law, for every run-away taken up, they refufed to proceed againft the rebels, unlefs a collection was immediately made for them; leveral gentlemen prefent fubmited to comply with this extraordinary demand, rather than delay the fervice; after which they marched, and had one engagement with the rebels, in which they killed a few. A party of the \(74^{\text {th }}\) regiment lay quartered at a houfe by the fea fide, at a finall diffance from the woods; in the night the rebels were fo bold, that they crept very near the quarters, and, having fhot the centinel dead, retired again with the utmoft agility from purfuit. Not long after this accident the regulars, after a tedious march through the woods, which the fteepnefs of the hills, and heat of the weather, confpired to render extremely fatiguing, came up with the enemy, and an engagement enfued, in which feveral of the rebels were killed, and lieut. Bevil of the regulars wounded. The different parties continued in chafe of the fugitives, and fkirmifhes happened every day; Lut in the mean while, the firit of rebellion was Chewing itfelf in various other parts of the ifland, there being farcely a fingle parifh, to which this confpiracy of the Coromantins did not extend. In St. Mary's parifh a check was fortunately given at one eftate, by furprizing a famous obeiah man or prieft, much refpected among his countrymen. He was an old Coromantin, who, with others of his profeflion, had been a chief in counfeling and inftigating the credulous herd, to whom thefe priefts adminiftered a powder, which, being rubbed on their bodies, was to make them invulnerable: they perfuaded them into a belief, that Tacky, their generaliffimo in the woods, could not poffibly be hurt by the white men, for that he caught all the bullets fired at him in his hand, and hurled them back with deftruction to his foes.

This old impoftor was caught whilft he was tricked up with all his featherr, teeth, and other implements of magic, and in this attire fuffered military execution by hanging: many of his difciples, when they found that he was fo eafily put to death, notwithfanding all the boafted feats of his powder and incantations, fooin altered their opinion of him, and determined not to join their countrymen, in a caufe which hitherto had been unattended with fuceefs. But the fame of general Tacky, and the notion of his invulnerability, fill prevailed over the minds of others, as that liero had efiaped hitherto in every conflict without a wound. The true condition of his party was artfully miffeprefented to the Coromantins, in the diftant parifhes; they were told that every thing went on profperounly, that viefory attended them, and that nothing now remained but for all their countrymen to be hearty in the caufe, and the ifland muff fpeedily be their own. Animated with thefe reports, the Coromantins on capt. Forreft's effate, in Weftmoreland, broke into rebellion. They furrounded the man-fion-houfe, in which Mr. Sinith, attorney to Mr. Forreft, with fome friends, was fitting at fupper; they foon difpatched Mr. Smith and the overfeer, and terribly wounded captain Hoare, commander of a merchant fhip in the trade, who afterwards recovered. Three other Negroes b:longing to this eftate made thei: efcape privately, and alarmed the neighbouring fettlements, by which means the white perfons upon them provided for their lives, and took meafures which prevented the Negross on three contiguous efiates from rifing. A gentleman, proprictor of one of thefe effates, remarkable for his humanity and kind treatment of his flaves, upon the firft alarm, put arms into the hands of about twenty; of whofe faithful attachment to him, he had the utmoof confidence: thefe were all of them Coomantins, who no fooner had got poffeffion of arms, than they convinced their mafter how little they merited the good opinion he had entes ained of them; for having ranged themfelves before his houfe, they wifured him they would do him no harm, but that they muft go and join their countrymen, and then faluting him with their hati, they ever one marched off. Among the rebcis were feveral French Negroes, who had been taken prifoners at Guadaloupe, and, being fent to Jamaica for fale, were purchafed by capt. Forreff. Thefe men were the more dangerous, as they had been in arms at Guadaloupe, and feen fomething of military operations; in which

\section*{BOOK III. CHAP. III.}
which they acquired fo much fkill, that, after the maffacre on the effate, when they found their partifans of the adjacent plantations did not appear to join them, they killed feveral Negroes, fet fire to buildings and cane-pieces, did a variety of other milchief, and then withdrew into the wools, where they formed a ftrong breaft-work acrofs a road, flanked by a rocky hill; within this work they erected their huts, and fat down in a fort of encampment; a party of militia, who were fent to attack them, very narrowly efcaped bing all cut off. The men were badly difciplined, having been hafily collected; and falling into an ambufcade, they were ftruck with terror at the difmal yells, and the multitude of their affailants. The whole party was thrown into the utmoft confufion, and routed, notwithffanding every endeavour of their officers; each ftrove to fhift for himfelf, and whilt they ran different ways, farcely knowing what they were about, feveral were butchered, others broke their limbs over precipices, and the reft with difficulty found their way back again. This unlucky defeat raifed the fpirits of the Coromantins in this part of the country, and encouraged fo many to join the vittorious band, that the whole number very foon amounted to upwards of a thoufand, including their women, who were neceffary for carrying their baggage, and dreffing their vistuals. This confequence fherved, how ill judged it was, to make the firft attack upon them with a handful of raw, undifciplined militia, without advancing at the fame time a party in referve, to fuítain their efforts, and cover their retreat. In fuppreffing thefe mutinies, the firft action has always been of the utmoft importance, and therefore fhould never be confided to any except tried and well-trained men. The winning the firft battle from the rebellious party, ufually decides the iffue of the war; it difconcerts the confirirators, not as yet engaged, and who keep aloof, irrefolute whether to join or not ; and it intimidates all that are in arms, and mof commonly plunges them into defpondency: the reverfe is fure to follow a defeat of the Whites on the firft encounter; and nothing can add greater firength to rebellion, or tend more to raife the authority of the priefts and leaders who have fet it on foot. Thefe remarks have been fully verified, in courfe of the prefent, and every other infurrection that has occurred in this inland. The infurgents in St. Mary, who opened the campaign, were repulfed in the firft conflict, and from that time grew difheartened,

\section*{I \(\mathrm{A} M \mathrm{~A} \quad \mathrm{I}\) C A .}
and dimininhing in their numbers; their confederates in that parifh looked upon their rout as ominous, and would not venture to affociate with them in the undertaking, whillt thofe of Wefmoreland, who would probably have given up the caufe, if they had met with a fevere check at their firth outict, were now become fluthed with a confidence in their fuperiority, and gathered reinforcements every day. However, they were not fuffered to remain long in this affurance of fuccef; a detachment of the 49 th regiment, with a frefh company of militis, and a party of the Leeward Marons, marched to attack them. The regulars led the van, the militia brought up the rear, whilft the Marons lined the wood to the right and left, to prevent ambufcades. The rebels colleeted behind their fortification, made flhew of a refolution to defend their poft, and fired inceffiantly at their opponents, though with no other injury than wounding one foldier. The officer, captain Forfyth, who commanided the detachment, advanced with the utmoft intrepidity, ordering his men to referve their fire, till they had reached the breaft-work; at which time, they poured in fuch a volley, that feveral of the rebels immediately fell, and the reft ran as faft as they could up the hill. A Mulatto man behaved with great bravery in this action; he leaped on the breafl-work, and affaulted the rebels fword in hand. Haring gained a lodgement, the troops declined a purfuit, and carelefsly entered the huts, where they fat down to refrefh themfelves with fome provifions, of which they found a large fore; the rebels, perceiving this, difcharged feveral random fhot from the hill above them, which paffed through the huts, and had very near been fatal to fome of the officers: the Marons, upon this, penetrated the wood at the foot of the hill, and afcending it on the oppofite fide, and fpreading themfelves, fuddenly affaulted the rebels in flank, who were inflantly routed, and a great number killed, or taken prifoners. During the attack at the breaft-work, Jemmy, a Negroe belonging to the late Mr. Smith, gave proof of his fidelity and regard to his mafter, whofe death he revenged by killing one of the rebels, and other fervices, for which he was afterwards rewarded with his freedom, and an annuity for life, by the affembly. After this overthrow, the Wefmoreland rebels were never able to att any otherwife than on the defenfive; feveral fkirnififes happened, in which they were confantly put to fight; their numbers were gradually reduced, and

\section*{BOOK III. CHAP. III.}
many deffroyed themfelves. About the time of their breaking out, feveral other confpiracies were in agitation: in the Vale of Luidas, in St. John's, the Coromantins had agreed to rife, ravage the eftates, and murther the white men there; they fixed a ceriain day for commencing hofilities, when they were to break open the houfe at Langher's plantation, and feize the fire arms lodged there; after which, they were to flay all the Whites they could meet with, fire the houfes and canepieces, and lay all the country wafte. Three Negroes, who were prisy to this machination, difclofed it to their overfeer, in confequence of which, the ringleaders were taken up, and, upon conviction, executed; others, who turned evidence, were tranfported off the illand: and thus the whole of this bloody fcheme was providentially fruftrated.

In the parih of St. Thomas in the Eart, a Negroe, named Caffee, who had been prefled by fome Coromantins there to join with them in rebelling, and deftroying the effates and white inhabitants, declined at firft being concerned ; but recollecting that fome advantages might be gained to himfelf by a thorough knowledge of their intentions, he afterwards pretended to have thought better of their propofals, and, profeffing his zeal to embrace them, he affociated at their private cabals from time to time, till he became mafter of the whole fecret, which he took the firft opportunity to difcover, and moit of the confpirators were apprehended.

Confiracies of the like nature were likewife detected in Kingfon, St. Dorothy, Clarendon, and St. James, and the partizans fecured.

In Kingiton, a wooden fword was found, of a peculiar fructure, with a red feather ffuck into the handle; this was ufed anoong the Coromantins as a fignal for war; and, upon examining this, and other fufpicious circumfances, to the botom, it was difcovered, that the Coromantins of that town had raifed one Cubah, a female flave belonging to a Jewefs, to the rank of royalty, and dubbed her queen of KingAon; at their meetings fhe had fat in fate under a canopy, with a fort of robe on ber thoulders, and a crown upon her head. Her majefty was feized, and ordered for tranfportation; but, prevailing on the captain of the tranfport to put her athore again in the leeward part of the ifland, the continued there for fome time undifcovered, but at length was taken up, and executed. Thefe circumftances fhew the great extent of the confpiracy, the ftrict correfpondence which had been carried

\section*{\(45^{6}\)}
on by the Coromantins in every quarter of the ifland, and their almoft incredible fecrefy in the forming their plan of infurrection; for it appeared in evidence, that the firt eruption in St. Mary's, was a matter preconcerted, and known to all the chief men in the different diftriets; and the fecret was probably confided to fome hundreds, for feveral months before the blow was fruck.

Some perfons furmifed, that they were privately encouraged, and furnifhed with arms and ammunition, by the French and Spaniards, whofe piccaroons were often feen hovering near the coaft; but there feems no juft foundation for fuch an opinion: it is certain, the rebels found an eafier means of fupplying themfelves with large quantities of powder, ball, lead, and feveral fiands of arms, on the different eftates where they broke out; on fome of thefc, they found two or three dozen mufquets and cutlaffes, which were not guarded by more than two or three white men. The planters, as I have before remarked, very imprudently kept thefe magazines, which were by far too many for their neceflary defence, and attracted the notice of the Coromantins, who are practifed in the ufe of arms from their youth in their own country, and are at all times difpofed for mutiny.

A frefh infurrection happened in St. James's, which threatened to become very formidable, had it not been for the activity of brigadier Witter of the militia, and lieut. colonel Spragge of the 49 th, who difperfed the infurgents, and took feveral prifoners; but the reft efcaped, and, uniting with the ftragglers of the other defeated parties, formed a large gang, and infefted Carpenter's Mountains for fome time. Another party of twelve Coromantins in Clarendon, whom their mafter, from a too good opinion of their fidelity, had imprudently armed, at their own earneft intreaty, and fent in queft of a fmall detached band of rebels, of whofe haunt he had gained intelligence, deferted to their countrymen, but were foon after furprized, and the greater part of them killed or taken. Damon, one of the Weftmoreland chiefs, with a fmall gang, having pofted himfelf at a place called Mile Gully in Clarendon, a voluntary party, under command of Mr . Scot and Mr. Greig, with three or four more, went in queft of them. They had a long way to march in the night, through the woods, and acrofs a difficult country; but, having provided themfelves with a trufty guide, they came up to the haunt about midnight, attacked the rebels without
lofs of time, killed the chief, and one of his men, wounded another, and took two prifoners; for which fervice, the affembly made them a genteel recompence, befides a good reward to the Negroes who affinted them in this enterprize.

The rebels in St. Mary's, under general Tacky, fill maintainced their ground. Admiral Holmes had difpatched a frigate to Port Maria, which proved of great ufe for the fafe cufody of prifoners, who were too numerous to be confined on fhore, and required too large a party of militia to guard them; but after they were removed on board, where they were well fecured, the militia were ready to be employed on more active fervice: no meafure, therefore, could be more feafonable and judicious; and it was one good effeet of the harmony then fubfirting between the commander of the fquadron and the lieutenant governor. The rebels now thought only of concealing themfelves, and made choice of a little glade, or cockpit, fo environed with rocky fteeps, that it was difficult to come at them; but, in this fituation, a party of militia and Marons, with fome failors, affaulted them with hand grenades, killed fome, and took a few prifoners. Soon after this, they fuffered a more decifive overthrow; the Marons of Scot'sHall, having got fight of their main body, forced them to an engagement; the rebels foon gave way, and Tacky, their leader, having feparated from the reft, was clofely purfued by lieut. Davy of the Marons, who fired at him whilft they were both running a full fpeed, and fhot him dead. His head was brought to Spanilh Town, and fluck on a pole in the highway; but, not long after, folen, as was fuppofed, by fome of his countrymen, who were unwilling to let it remain expofed in fo ignominious a manner. The lofs of this chief \([y]\), and of Jamaica, another of their captains, who fell in the fame battle, frruck moft of the furvivors of their little army with defpair; they betook

\section*{themfelves}
[y] He was a young man of good ftature, and well made; his countenance handfome, but rather of an effeminate than manly caft. It was faid, he had flattered himfeif with the hope of obtaining (among other fruits of vietory) the lieutenant governor's lady for his concubine. He did not appear to be a man of any extraordinary genius, and probably was chofen general, from his limilitude in perfon to fome favourite leader of their nation in Africa. A gentleman, feveral yearr fince, having fet up in a confpicuous part of his plantation a bronzed ftatue of a gladiator, fomewhat larger than the natural fize, the Coromantins no fooner beheld, than they were almoft ready to fall down, and adore it. Upon enquiry, the gentleman learnt, that they had difcovered a very ftriking likenefs between this figure and one of their princes, and believed that it had been copied from him.
VoL. II.
Nan
Two
themfelves to a care, at the diftance of a mile or two from the fene of action, where it was thought they laid violent hands on one another, to the number of twenty-five; however, the Marons, who found them out, claimed the honour of having flain them, and brought their ears to the lieutenant governor, in tefimony of their death, and to entitle themfelves to the ufual reward. A few miferable fugitives fill fculked about the woods, in continual terror for their fate; but at length, they contrived to fend an embaffy to a gentleman of the parifh (Mr. Gordon), in whofe honour they repofed implicit confidence, and expreffed their readinefs to furrender upon the condition of being tranfported off the ifland, inftead of being put to death. This gentleman had a congrefs with their leaders unarmed, and promifed to exert his endeavours with the lieutenant governor; on their part, they feemed well pleafed to wait his determination, and gave affurance of their peaceable demeanour in the mean while. The lieutenant governor's confent was obtained; but under an appearance of difficulty, to make it the more defireable; and, upon intimation of it at the next private congrefs, they one and all fubmitted, and were fhipped off, purfuant to the ftipulation. The remains of the Weftmoreland and St. James's rebels fill kept in arms, and committed fome ravages. In September therefore ( 1760 ) the lieutenant governor convened the affembly, and in his feeech informed them, "That the various feenes of diffrefs, occafioned by the infurrections which broke out in fo many different parts of the country, would have engaged him fooner to call them logether; but he was obliged to defer it, as their prefence was fo neceffary in the feveral diftricts, to prevent the fpreading of an evil fo dangerous in its confequence to the whole ifland.
"That he had the fatisfaction to acquaint them, his expectations had been fully anfwered, by the vigilance and bravery of the troops employed during the late troubles; that tle many difficulties they had to encounter, only ferved to fet their behaviour in a more adrantage-
Two of the St. Mary's ringleaders, Fortune and Kingfton, were hung up alive in irons on a gibbet, erected in the parade of the town of Kington. Fortune lived feven days, but Kingiton furwived till the ninth. The morning before the latter expired, he appeared to be convulfed from head to foot; and upon being opened, after his deceafe, his lungs were found adhering to the back fo tightly, that it required fome force to difengage them. The murders and outrages they had committed, were thought to juftify this cruel punifhment inflicted upon them in terrorem to others; but they appeared to be very little affected by it themfelves; behaving all the time with a degree of hardened infolence, and brutal in'enfibility.
ous light; and the plan now propofed for carrying on their operations, had the faireft profpect of totally fuppreffing, in a very fhort time, all the difturbers of the public repofe.
"That the ready affiftance he had received from rear-admiral Holmes, in tranfporting troops and provifions, and in ftationing his majefty's fhips where they could be of moit fervice, enabled him to make ufe of fuch vigorous meafures, and employ to advantage fuch a force, that, notwithftanding the formidable number of rebels which had appeared in arms, and the many combinations which were formed among the flaves throughout the ifland, their projects were rendered abortive, and tranquillity again reftored, where total deftruation had been threatened.
" That nothing had been omitted to render the martial law as little grierous as poffible to the inbabitants, although the long continuance of it could not fail of being feverely felt by the community in general; but the public fecurity required it; and to that, every other confideration gave place.
"That the care which had been taken to introduce a proper difcipline among the militia, had now put them on fo refpectable a footing, that they only required the aid of legillature, to make them truly uffeful. The great defects of the laft militia law were never more apparent than during the late misfortunes, when the private foldier was fupported in difobedience of his commanding officer's orders; and, when called upon for his country's fervice, empowered, on the payment of an inconfiderable fine \([z]\), to withdraw that affiffance, for which he was enlifted."
The latter part of the lieutenant governor's fpeech alludes principally to the conduct of feveral privates in the militia, and particularly the Jews, who refufed to turn out and appear under arms on their fabbath, and other feftivals or fafts, making a religious fcruple of confcience their pretext, though it was well known that they never ferupled taking money and vending drams upon thofe days; others wilfully abfented themfelves, and paid the fine, which came to much lefs than their profits amounted to by flaying at home, and attending their fhops. Im uft not here omit a little anecdote relative to thefe people: one of the rebel leaders, having been taken prifoner in Weffmoreland,

\footnotetext{
[z] Ten millings for non-appearance at mufter.
}
was confined in irons, in the barrack at Savannah la Mar, to wait his trial. It happened that, on the night after his captivity, a Jew was appointed to fland centry over him: about midnight the rebel, after reconnoitering the perfon of his guard, took the opportunity of tampering with him, to favour his efcape. "You Jews, faid he, and our " nation (meaning the Coromantins), ought to confider ourfelves as " one people. You differ from the reft of the Whites, and they hate " you. Surely then it is beff for us to join in one common intereft, " drive them out of the country, and hold poffeffion of it to ourfelves. "We will have (continued he) a fair divifion of the eftates, and we " will make fugar and rum, and bring them to market. As for the " failors, you fee they do not oppofe us, they care not who is in pof-
" feffion of the country, Black or White, it is the fame to them; fo " that after we are become mafters of it, you need not fear but they " will come cap in hand to us (as they now do to the Whites) to " trade with us. They'll bring us things from tother fide the fea, "and be glad to take our goods in payment." Finding the Jew's arguments, in objection to this propofal, not fo difficult to furmount as he had expected, he then finifhed his harangue with an offer, that, " if he would but releafe him from his irons, he would conduct him "direetly to a fpot, where he had buried fome hundred of piffoles, "s which he fhould have in reward." The Jew was very earneft to know whereabouts this hidden treafure lay, that he might firf fatisfy his own eyes, that what be had been told was true, before he fhould take any further ftep; but the prifoner flatly refufed to let him into the fecret, unlefs he was firft fet at liberty; which condition the Ifraelite was either too honeft or too unbelieving to comply with, but the next day reported what had paffed, to his officers.

The lieutenant-governor recommended to the houre, the putting the illand into a better pofture of defence, and the pafing fuch new regulations for remedying thofe defects in the laws, which the late calamities had pointed out, as might beft feem adapted to prevent future attempts of the like nature.
The affembly immediately addreffed him, to proclaim martial law, in order to put an end to the rebellion ftill fubfifting in the Leeward part of the ifland. They tranfmitted the thanks of their houfe to admiral Holmes for the affiftance he had given ; who returned a very

\section*{B OOK III. CHAP. III.}
polite anfwer, and affured them, "that his greateft pleafure would "c confift in the execution of his duty againft his majefty's enemies, " and in giving the utinoft protection in his power to the trade and "6 commerce of the ifland."

They likewife expreffed their moft grateful fentiments of the lieu-tenant-governor's vigilance and conduct, which had fo happily contributed to the reduction of the rebels in one part, and would, they hoped, very fhortly effect their total fuppreffion. For this end, they applied their deliberations, and received the propofals of William Hynes, a millwright by trade, who had been ufed to the woods, and very ferviceable againft the rebels in St. Mary's. He propofed that he fhould be empowered by the lieutenant-governor to beat up for volunteers, and raife among the free Mulattos and Negroes a party of one hundred fhot; with which he would march againft the rebels in Weftmoreland, and do his utmoft to reduce them.

He defired to have two lieutenants and one enfign to be in fubordinate command ; that the reward for their fervice fhould be equal, and that his party fhould be furnifhed at the public expence with fuitable arms and accoutrements, money to provide neceffaries, and a fated premium for every rebel they fhould take or deftroy. This fcheme was approved of, and a bill paffed for carrying it into immediate execution. At the fame time feven companies, of thirty men each, were draughted from the militia, and fifteen baggage-Negroes allotted to each company, making in all three hundred and fifteen, who were ftationed by the lieutenant-governor in the moft advantageous pofts ; and troopers were difpofed in fuch a manner, as to carry difpatches to and from them, with the beft expedition. The affembly granted \(450 \%\) to be divided among the Marons of Trelawny and Accompong Towns, in payment of their arrears due to them, and to encourage their future fervices. Captain Hynes, with his party, went in fearch of the rebels, and was four months on the fcout; at laft, after a tedious purfuit, he furprized them in their haunt, killed and took twelve, and the remainder were afterwards either flain or taken prifoners by other parties, or deftroyed themfelves, which latter was the cataftrophe of numbers; for the parties of militia frequently came to places in the woods, where feven or eight were found tied up with withes to the boughs of troes; and
previous to thefe felf-murders, they had generally maflacred their women and children. The affembly ordered \(562 \% .12 \mathrm{~s} .6 \mathrm{~d}\). to be paid captain Hynes, for his difburfements, and as a recompence for his fervices. Thus terminated this rebellion; which, whether we confider the extent and fecrefy of its plan, the multitude of the confpirators, and the difficulty of oppofing its eruptions in fuch a variety of different places at once, will apparar to have been more formidable than auy hitherio known in the Weft Indics; though happily extinguifhed, in far lefs time than was expected, by the precaution and judgement of the lieutenant-governor in the difpofition of the forces, the prompt affiftance of the admiral, and the alacrity of the regulars, feamen, militia, and Marons, who all contributed their flare towards the fpeedy fuppreffion of it. The lieutenant governor, under whofe prudent conduct this inteftine war was fo fuccefffully brought to a conclufion, was a native of the ifland, and had a property in it at ftake; but if this may detract any thing from the merits of his exertion, it proves at leaft, how much more may reafonably be hoped from the affiduity of a gentleman of the ifland, who is interefted in its welfare, and in whom a perfect knowledge of the country is fuperadded to natural ability and public fpirit, than from others, who, having nothing to lofe in it, may be lefs anxious for its prefervation. There fell, by the hands of the rebels, by murder, and in action, about fixty white perfons; the number of the rebels who were killed, or deftroyed themelves, was between three and four hundred. Few in proportion were executed, the major part of the prifoners being tranfported off the infand \([a]\). Such as appeared to have been involuntarily compelled to join them, were acquitted; but the whole amount of the killed, fuicides, executed and tranfported, was not lefs than one thoufand; and the whole lofs fuftained by the country, in ruined buildings, cane-pieces, cattle, flaves, and difburfements, was at leaft \(100,000 \%\). to fpeak within compafs.
[a] Moit of them were fent to the Bay of Honduras, which has long been the common receptacle of Negroe criminals, banifhed from this ifland; the confequence of which may, fome time or other, prove very troublefome to the logwood cutters ; yet they make no fcruple to buy thefe outcafts, as they coft but little. It is difircult to find a convenient market for fuch flaves among the neighbouring foreign colonies; but, if poffibly it could be avoided, thefe dangerous fpirits fhould not be fent to renew their outrages in any of our own infant fettlements.

The affembly, upon the lieutenant governor's recommendation, proceeded to frame and pafs an act, to remedy the evils arifing from irregular meetings of flaves; to prevent their carrying arms, or having ammunition, or going from place to place without tickets; to prohibit the practices of obeiab (or the arts of pretended conjurors) ; to reftrain overfeers from leaving eftates under their management on certain days (Sundays and holidays); and to oblige all free Negroes, Mulattoes, and Indians, to regifter their names in the veftry books of their refpective parifhes, and carry about them a certificate, and wear (the crofs) a badge of their freedom; and, laftly, to prevent any captain, mafter, or fupercargo, of any veffel, from bringing back convict tranfported flaves. All thefe regulations were extremely prudent and neceffary; but they explain the defects hinted in the lieutenant governor's fpeech to the houfe, and evince the abufe which has been made by the Negroes of the indulgencies hitherto allowed them. The affembly further voted, that the feveral flaves, fent out againft the rebels duing the late rebellion, fhould receive the fame rewards for killing, or taking them alive, as the Marons were entitled to, upon producing a certificate to the commanding officer, of their having effected fuch fervice. They alfo paffed an act, for purchafing from their owners, and granting freedom, to about twenty Negroe flaves, for their fidelity to the public; they fettled upon each of them an annuity for life, and gave them a circular badge, or medal of filver, on which was engraved the date of the year, with the words, "Freedom for being Honeft," on one fide, and on the reverfe, "By the Country."

As thefe infurrections and confpiracies had, for the moft part, appeared upon eftates belonging to perfons refident in England, and the expences attending their fuppreffion occafioned a very enormous fum to be levied in taxes, it was thought but equitable, that the proprietors, who, by their abfence, had left their flaves in want of a due controul, and the perfonal influence of a mafter, and their eftates to be defended by the perfonal fervices and hardhips of other men, while they themfelves were repofing in eafe and affluence, beyond the reach of danger, ought to compenfate for their non-refidence, by paying a larger fhare of the public charges, incurred in fome meafure through their means. They accordingly refolved to double the deficiency tax for the year 1761 ; and allow every proprictor refident within

\section*{J A M A I C A.}
the ifland to fave his own deficiency for 30 liares, or 150 head of cattle; and all proprietors, under twenty-one years of age, fent off for the benefit of their education, to fave half a deficiency. By this meafure they threw an extraordinary weight of taxation, for that year, upon the abfentees. They likevvife addrefied his majectiy, that he would be pleafed to give directions, that the company of the 49 th regiment, frationed at the Mofquito fhore, and four companies of the 74 th, at the coalt of Africa, might repair to, and join, their refpecaive regiments in Jamaica. They reprefented, that many gentlemen, of large eftates in the ifland, were non-refidents, whofe influence over thcir flaves, if refident, would, in all probability, contribute mach to the prevention of the mifchiefs arifing from rebellious confpiracies and infurscctions; and that they found themfelves under indifpenfable ncceffity of foliciting his majefty for another regiment, for the better fecurity of the ifland; and the rather, as they had paffed a bill, obliging the inhabitants of the feveral parifhes to erect barracks for the reception and accommodation of more troops. They voted a large fum for flrengthening the fortifications, ordered a fupply of fores for the forts, and directed a powder magazine to be built at Spaniih Town.
On the 12 th of October, 176 r , the affembly met again; when the lieutenant governor, in his fpeech, informed them, that he had delayed their meeting beyond the ufual time, in order that every meafure might be enforced, which could tend to the prefervation of the general tranquillity, at that time happily reftored again, by the total Jupprefion of the rebellion, and to give them opportunity of fupporting, by their prefence in their feveral diftricts, thofe refolutions, which were taken for the internal fecurity of the ifland, and the prevention of future attempts, to involve them again in calamities of the like nature. That the advantages which muft attend the erection of barracks in the different parifhes, and the cantoning his majefty's troops according to the plan then laid down, were fo evident, that no one, interefted in the welfare of that community, could difapprove of fo prudent a meafure.

Thus, every meafure that could be fuggefted, either for remedying the diforders under which the inland had fuffered fo much, or for baffling the machinations of future infurgents, or putting the forts and fortifications into a refpectable fate of defence againft foreign enemies,
was profecuted as far as the lieutenant governor's authority could give it fanction, or the affembly fecond his recommendations. Mr. Lyttelton arrived as governor the following year (February, 1762); and the public tranquillity remained undifturbed by infurrections for fome time. It was however well known, that feveral Coromantins, who had actually been in arms during the late commotion, whiltt their caufe wore a promifing afpeet, flunk away afterwards, and re-turned again again to their duty, affecting great abhorrence at the behaviour of their countrymen, and even pretending that they had been exerting themfelves in oppofition to the rebels. With good reafon therefore it was fufpected, by many perfons in St. Mary's, that thefe deferters, who had taken the fetijoe, or oath, which they regard as inviolable, would diffemble their genuine fentiments for the prefent, and wait a favourable opportunity to execute their bloody purpofes. Some time in July, 1765 , there was a private meeting in that parifh, of feveral Coromantin headmen, who entered into a confpiracy for a frefh infurrection, to take place immediately after the Chriftmas holidays; they bound the compact with their fetifhe, according to cuftom, and received affurances from all or moft of the Coromantins in the parifh, that they would join. But the impatience of fome among them to begin the work, hurried them on to rife before the day appointed, and difconcerted their whole plan ; for, on the 2gth of November, at night, a Coromantin, named Blackwall, belonging to Whitehall plantation, who had been tried formerly on fufpicion of being concerned in the rebellion of 1760 , and acquitted for want of fufficient evidence, having previoufly feduced to his party nine Coromantins on the fame eftate, but a little before imported from Africa, fet fire to the works and trafh-houfes, with a view to decoy the overfeer, and other white perfons there, from their beds, to extinguifh it ; and then to cut off their retreat to the dwelling-houfe, fecure the arms lodged there, and proceed to murther them, without fear of refiftance.
Upon the firft alarm of fire, the overfeer and white fervants repaired to the works, as had been forefeen; where they met with Blackwall (who held a poft of fome authority on the effate), bemoaning the fad accident, and fhewing great alertnefs in fetching water to fupply the Whites, whom he advifed to get upon the roofs, where they Vol. II.

O o
might

\section*{J A M A I C A.}
might throw it on the flames with the beft advantage ; the overfeer, not having the fmalleft diftruft of him, and wholly employed about extinguifhing the fire, readily purfued his advice. In the dwellinghoufe were Mr. B-, and his fifter Mrs. B-d, who had hafilily fipped on their cloaths, and were ftanding in the piazza, at the front of the houfe, and looking towards the conflagration; when, all at once, the nine confederates broke through the back-door, all ftarknaked, with the moft hideous yells, and fharpened bills in their hands; Mr. B-was unfortunately very infirm, and had no chance of efcaping; while therefore he turned to expoftulate with them, they furrounded and hacked him into a thoufand pieces. The pleafure they enjoyed in mangling the body of this unhappy gentleman (who had only lodged here, by accident, in his way to Spanifh Town) afforded Mrs. B-d an opportunity to jump out of the piazza, and run towards the bottom of the hill on which the houre ftood; but, before fhe could reach fo far, fhe fell down; in this fituation fhe was feen by two faithful Negroe men, her domeftics, who flew to her affiftance; upon their coming up to her, fhe concluded no lefs than that the was in the hands of the rebels, and deffined for immediate butchery ; but, whilit the was imploring for mercy, the fervants feized her in their arms, and, with great prefence of mind, haftened with her as faft as they could to the fide of a neighbouring river, where they concealed her amongft the fedge and grafs, that grew very thick, injoining her to lie clofe, whilft they were gone to look for more affiftance. The rebels, in the mean time, difpatched another gentleman, who, upon the cry of fire, had come from the next eftate, and fell into their cluthces. But the overfeer, and other Whites, on hearing the groans of \(\mathrm{Mr} . \mathrm{B}\) —, and the thouts of his murtherers, fled to Ballard's Valley, which eftate joins Whitehall; where they called up the white men to fecure themfelves, and prepare for their defence. The flames, which were feen at a great diffance, ferved as a fignal to other confpirators ; fo that their number was now augmented to fifty or fixty; who, with the moft horrid acclamations, (having got poffeffion of all the arnss at Whitehall, with powder and ball) began their march, paffed clofe by the place of Mrs. B- d's concealment, without perceiving her, and proceeded on to Ballard's Valley. When they were got to a fufficient diffance, one of her trufty fervants returned, with great
caution, to the ftable, where, finding a horfe, he fixed on a pillion, and, coming to his miftrefs, carried her through bye-ways to another eftate, and brought to the white people there the firf intelligence of what had happened. Corfidering the great danger to which that lady was expofed, and that the moft trifling noife, at the time when the rebels paffed her retreat, might have betrayed it, her efcape appears almoft miraculous; and it feems as if the hand of Providence had ins terpofed, to protect her life, and make her two fervants the inftruments of prefervation, whofe fidelity and addrefs cannot be too highly extolled. The rebels, being arrived at the valley, laid clofe fiege to the overfeer's houfe, which was garrifoned with about ten white men. This houfe was erected upon a ftone foundation, raifed fome beight from the ground, and furnifhed with loop-holes. The little garrifon made proper difpofitions for defence, and placed fome of their party at the loop-holes below. The rebels were joined by feveral of their countrymen on this eftate; and, furrounding the houfe, began to ufe the moft infulting language in their power, to provoke the Whites to come forth, that they might enjoy the fatisfaction of killing them; but finding this ineffectual, they prepared for burning the houfe about their ears; for this purpofe they collected a parcel of dry trafh, which they faftened to the extremity of a long pole, and one of their leaders fetting his back to a loop-hole, kindled the trafh, and applied it to the wood-work of the roof. At that inftant he was perceived by one of the centries pofted below, who difcharged his piece at him ; the ball ftruck againft the lock of a gun, which the rebel had in his hand, and recoiling into his body, killed him upon the fpot. His fall threw the reft of the confpirators into difmay, for he was one of their chiefs; upon which the garrifon, taking advantage of their fufpence, fallied out with great fpirit, killed two or three, and difperfed the reft, who immediately fled into the woods. Blackwall, the principal of the gang, finding how matters were likely to end, detached himfelf from his brethren, and a few hours afterwards prefented himfelf before his overfeer in feeming terror, pretending he had narrowly efcaped being put to death by his countrymen ; to avoid whofe fury, he had crawled into a cane-piece, and there hid himfelf till that inftant. Parties were fpeedily collected, who purfued the rebels into the woods, and reduced them with but little difficulty.

\section*{J A M A I C A.}

Sufpicions arifing, that this confpiracy was more extenfive than at firft appeared, and upon recollection that there had been a merry meeting of the Negroes at Ballard's Valley two nights preceding the infurrection, and that the Coromantins had feparated from the reft, a ftrict inquirywas entered into; and upon examining fome Coromantins, who were moft fufpected, they impeached feveral of their countrymen; frefh evidences produced further difcoveries, and at length the plot was partly unraveled. It appeared that the Coromantins on no lefs than feventeen eftates in that parifh were engaged in the confederacy; that Blackwall was the principal inftigator; and that the premature rifing at Whitehall was owing to the impetuofity of one Quamin, belonging to their gang, who would not wait the appointed time ; fo that it is probable, if they had not met a repulfe foon after their firft outrage, the infurrection would have been general, from the encouragement their better fuccefs would have given to the reft of the confpirators. Some among them regretted exceedingly the precipitate eagernefs of Quamin, and threw out infinuations that the Marons were in the fecret, and that the infurrection was intended to have opened at once in three different places, at a certain day foon after Chriftmas; that three days previous notice was to be given of the exact hour of rifing; and as they hoped to find the white people off their guard, and to get poffeffion of fufficient arms and powder, in the feveral dwelling-houfes, they bad full confidence, that, by their precautions, and fecrecy, they fhould carry all before them, and make amends for their former difappointment ; they knew, that a large ftock of fire arms and ammution would be abfolutely neceffary; one of their firf attempts therefore was to be, the furprize of the fort at Port Maria, which was garrifoned by only a fmall number of fickly foldiers, whom they fuppofed incapable of making any refiftance; thefe they were to drive into the fea with their bill-hooks, and then proceed to maffacre all the Whites in that neighbourbood. A fecond party were to ravage the Eaftern quarter of the parifh, quite down to the very coaft; whilft a third band fhould take their route through the Southern diftrict, and penetrate by the woods to Sixteen-mile-walk, where they pretended to have fereral affociates in readinefs; then, uniting their forces, they were to flaughter, or force the white inhabitants to take refuge on board the fhips, after which they were to divide the conquered coun-

\section*{BOOK III. CHAP. III.}
try with the Marons, who, they alledged, had made choice of the woody uncultivated parts, as being moft convenient for their hog-hunting; the Coromantins were to enjoy all the remainder, with the cattle and fheep, and live like gentlemen; at leaft they flattered themfelves, that the governor would apply to the king of the white men, to put the Coromantins upon the fame eftablighment as the Marons, who, they faid, were difgufted at the little refpect fhewn them, and wanted the Coromantins to be incorporated with them, in order to become of more confequence in the eyes of the white inhabitants.

This account of the defection of the Marons was fo improbable, that the white people would not give any credit to it : ia the firft place, it appeared nor at all likely that the Mirons, who had always received the higheft encouragement from the legiflature and private perfons, would hazard the lofs of their liberty and lives, by a treafonable breach of the treaty; and upon the uncertain iffue of an inteftine war, by the event of which, if fuccefsful to them, they could gain nothing more than what they already enjoyed; fecondly, they were to admit a dangerous fet of confederates, diftinct in intereft, and fuperior to them in number, by twenty to one, who would undoubtedly give the law to, and hold them in perpetual fubjection. The ftory was therefore fuppofed to be either the refult of a deep-laid policy, to ftir up a jealoufy and difference between the Marons and white people, from which fome advantage might accrue to the Coromantins in fome future infurrection; or elfe, if the Marons did really affociate in any fuch plan, they muft have done fo, from a wicked defign of embroiling the Coromantins in fref rebellion, in the fuppreffion of which they might reap a confiderable emolument, as they had heretofore experienced, by killing or taking prifoners. Something like fuch a project ufed to engage the frontier Indians in North America, who were never fo happy as when the French and Englifh were at war, becaufe they were fure of employment and reward, on one fide or other; and for this reafon alone, many of their tribes were exceedingly out of humour with the laft treaty of peace, which gave the finifhing blow to thele contentions for the maftery, and to their mercenary artifices. If therefore the Marons had any concern in the plot, it is moft reafonable to believe that fuch mult have been their true defign. The importance of this evidence naturally made the parihioners

\section*{J A M A 1 C A.}
parifhioners defirous of examining fill further, in order to get additional lights, and guard themfelves againft a repetition of thefe horrid attempts, which it appeared they had juft grounds to apprehend ; but the number of their militia was fo inconfiderable, that, after providing the proper guards for the different eftates moft expofed to danger, they had fo few left to take charge of the Negroe prifoners, that the latter were treble their number; fo that the magiftrates, whilft they were fitting on the trial of the rebels, were not without fear for their own fafety, as they had no protection againf any fudden infurrection made in favour of the prifoners; and, from the teftimony already given, it was certain, that a very confiderable body of the Coromantins had enlifted in the confiracy, befides thofe who were in cuftody. Remonftrances were repeatedly made upon this head, and the expediency ftated of fending round a fhip of war to Port Maria, as had been done in the former rebellion, to receive the prifoners, there being no gaol in the parifh, and only eighteen foldiers at the fort, who were in too feeble a condition to render them any fervice. At this time, there were no lefs than four companies quartered in Spanifh town, befides what lay in the different forts adjacent, fo that it was thought a detachment might very well have been fpared; but the commander of the iquadron fent no fhip, nor was a fingle man detached to reinforce the parifhioners, who were therefore left to take care of themfelves; and, defifting from further examination, through a regard to their own imminent danger, what remained to be known of this black affair was fmothered at once, to the no fmall joy of the confpirators [b].

A committee of the affembly, appointed to enquire into the rife and progrefs of this rebellion fome time afterwards, reported, That it had originated (like moft or all the others that had occurred in the ifland) with the Coromantins; whofe turbulent, favage, and martial temper was well known:

That their outrages had tended very much to difcourage the effectual fettlement of the ifland; and, as a remedy in future, they propoled " that a bill fhould be brought in for laying an additional higher "s duty upon all Fantin, Akim, and Afhantee Negroes, and all others " commonly called Coromantins, that fhould, after a certain time, be "s imported, and fold in the ifland."
[b] Thirteen were executed, thirty-three tranfperted, and twelve acrquitted.

\section*{BOOK III. CHAP. III.}

Such a bill, if paffed into a law, would doubtlefs have fruck at the very root of the evil; for, by laying a duty equal to a prohibition, no more Coromantins would have been brought to infeft this country ; but, inftead of their favage race, the ifland would have been fupplied with Blacks of a more docile, tractable difpofition, and better inclined to peace and agriculture ; fo that, in a few years, the ifland might io all likelihood have been effectually freed of all fuch dangerous combinations. Whether the conceit of fome few planters, in regard to the fuperior frength of the Coromantins, and greater hardinefs to fupport: field labour, ought to outweigh the public tranquillity and fafety, or fhould be thought to atone for the blood of murthered white inhabitants, the ruin of others, the defolation of eftates, and the intoIerable charges of taxation thereby thrown upon the public, not to fpeak of the obftruction of all trade and bufinefs during the martial law, muft be left to the ferious confideration of a difpaffionate legiflature ; the fuppreffion of the Coromantins, in 1760 and 176.1 , coft the ifland \(15,000 \mathrm{l}\). I have before eftimated the expence of making good 1offes fuftained, \(\mathcal{B}^{C}\). at \(100,000 \mathrm{l}\).; and the erecting of parochial berracks, in confequence of that infurrection, coft as much more. In the whole, the ifland expended not much lefs on that account than appears from the earlieft accounts to have been difburfed on the reduction of the Marons; for this was no more than 240,000 .

No bill however was paffed, the meafure was oppofed, and it dropped; but the firft fruits of this oppofition burft forth the very next year ( 1766 ), in a frefh difurbance, that happened on a gentleman's effate: in Weftmoreland ; where thirty-three Coromantins (for no other were concerned), moft of whom had been newly imported, fuddenly rofe, and, in the fpace of an hour, murthered, and wounded, no lefs than nineteen white perfons; but they were foon defeated, fome killed, and the remainder executed or tranfported. So that the owner fuftained a very confiderable lofs, and would himfelf have fallen a facrifice, had he been on the eftate; for they entered his dewelling-houfe, and hacked every thing they found in it to pieces. If fuch reiterated examples will not convince men of their errors, we muft fay, with an old Latio author, that,

\footnotetext{
2uos Deus vult perdere, prius dementat.
}

\section*{J A M A I C A.}

It is worthy our remark, that the ringleaders of the St. Mary's rebellion, in 1760 , belonged to a gentleman diftinguifhed for his humanity, and exceffive indulgence towards his flaves in general, and thofe in particular; his lenity fo far influenced him, thar, upon their complaint, he never failed to difcharge their overfeer, and employ another more agreeable to them. No pretence of ill ufage was alledged by any of the prifoners, in any of there infurrections, by way of extenuating their mifconduct; the fole ground, and object of their taking arms, as they unanimoufly concurred in acknowledging, was, the vaiu-glorious defire of fubduing the country; and they wanted neither ambition nor felf-confidence, to doubt their ability, or fuccefs, in accomplithing this project. It muft be allowed, that confpiracies fo extenfive could not have been conceived, methodized, and concluded upon, without various meetings of the confpirators, in different parts of the ifland; and hence, there muft appear to have been a very culpable inattention among the white inhabitants, who neglected to keep a vigilant eye over the Coromantins in general, during their hours of leifure or recreation; for a feafonable regard to their private cabals and feparate affociations might have proved the means of detecting their plot, long before it was ripe for execution; and to prevent, is always better, as well as eafier, than to remedy fuch evils. They fhould remember the dying words of one of the Coromantins executed in 1765 , who repented his having been concerned in the rebellion, and cautioned the white perfons prefent, " never to truft any of his countrymen." Much having been faid of this clafs of Negroes, who bave indeed been the heroes of my tale, it may not be unacceptable to give fome account of their origin, and qualities.

The Negroes who pafs under this general defcription are brought from the Gold coaft; but we remain uncertain, whether they are natives of that tract of Guiney, or receive their feveral names of Akims, Fautins, Afhantees, Quamboos, ©ic. from the towns fo called, at whofe markets they are bought. That diftritt is populus and extenfive ; and may therefore afford a confiderable number of criminals every year for tranfportation; however, whether they are brought from fome diftance inland, or are the refure and outcaft of the feveral provinces whofe names they bear; it is certain they are marked
with the fame characters, which authors have given to the natives of this part, who are faid to be the moft turbulent and defperate of any on the coaft of Guiney; and that, were it not for their civil divifions, they would become dangerous neighbours to all the furrounding ftates. Bofinan fays, "they are bold, hardy, and ftick at nothing, " where revenge or intereft is concerned; they are lazy, rapacious, "cumning, and deceitful; much addicted to theft, drunkennefs, "gluttony", lying, flattery, and luft; vain and haughty in their "carriage; envious and malicious in the higheft degree, diffembling os their refentments, for many years, until a fit opportunity offers of " gratifying their thirft of revenge; they are the moft treacherous " villains, and confummate knaves, yet known on that continent."
War and contention are their favourite amufements; inuled very early to the ufe of fire arms, they are good markfimen; they go naked, and their bodies by this means acquire a furprizing degree of hardinefs, and ability to undergo fatigue; but they have an invincible averfion to every kind of labour, and particularly agriculture, which they leave to their women. Their priefts, or obeiab-men, are their chief oracles in all weighty affairs, whether of peace, war, or the purfuit of revenge. When affembled for the purpofes of confpiracy, the obeiah-man, after various ceremonies, draws a little blood from every one prefent; this is mixed in a bowl with gunpowder and grave dirt ; the fetifhe or oath is adminiftered, by which they folemnly pledge themfelves to inviolable fecrecy, fidelity to their chiefs, and to wage perpetual war againft their enemies; as a ratification of their fincerity, each perfon takes a fup of the mixture, and this finifhes the folemn rite. Few or none of them have ever been known to violate this oath, or to defift from the full execution of it, even although feveral years may intervene. If defeated in their firft endeavours, they ftill retain the folicitude of fulfilling all that they have fworn ; diffembling their malice under a feeming fubmiffive carriage, and all the exterior figns of innocence and chearfulnefs, until the convenient time arrives, when they think it practicable to retrieve their former mifcarriage. If at length their fecret defigus are brought to light, and that hypocrify can no longer ferve their turn, they either lay violent hands on themfelves, or refift till they are difabled.
Vol. II.
Pp p
To

To their other illaudable qualities, they add thofe of ingratitude, and implacable anger. Not the mildeft treatment, the mof condefcending indulgence, can make the fmalleft impreffion upon them, conciliate their friendfhip, or divert their avidity for revenge, after they have received what they think an injury; they are utterly incapable of forgetting or forgiving; the higheft marks of favour produce in them no fenfe of obligation or gratitude. Prompted by thefe qualifications, and this infernal difpofition, they are always foremoft in plotting, and heading mutinies; and the fame caufes generating the fame invariable effects, there is no doubt but they will ever fupport an uniformity of character, and be found, by repeated experience, the moft unruly, infolent, ftubborn, and difaffected fet of labourers, that can poffibly be introduced upon our plantations.

Their language is copious, and more regular than any other of the Negroe dialects; their mufic too is livelier, and their dances entirely martial, in which they refemble the North Americans; like them too they defpife death (more through ftupidity than fortitude), and can fimile in agony [c]. Their perfons are well made, and their features very different from the reft of the African Negroes, being fmaller, and more of the European turn. Their dances ferve to keep alive that military fpirit, for which they are fo diftinguifhed; and the figure confifts in throwing themfelves into all the pofitions and attitudes, cuftomary to them in the heat of an engagement. Is it not then a very injudicious and impolitic obetinacy in the planters, who perfift, in defiance of reafon and experience, to admit thefe dangerous firits among them? Nature does not inftruct the farmer to yoke tigers in his team, or plough with hyænas; the gives him the gentle fteed, and patient ox: but it would be no lefs abfurd for him to make ufe of wild beafts for thefe purpofes, than it is for the planter fo vainly to attempt the taming of fuch favage minds to peaceful indurtry, and humble fubmifion to his authority. But, if he will perverfely continue to employ them, fome effectual regulations ought to be provided, in order to break that firit of con-

\footnotetext{
[c] Barbarinns always die without regret: what attachment have they to life? They feel not the plafures of fociety, the ties of affection, or of nature; their faculties are in fuch a perpetual flate -finfancy, that the face between their birth anil death is fearcel; percepible.
}

\section*{BOOK III. CHAP. III.}
federacy, which keeps thefe Negroes too clofely affociated with one another. On many eftates, they do not mix at all with the oilier flaves, but build their houfes diftinat from the reft; and, herding together, are left more at liberty to hold their dangerous cabals, without interruption. Their houfes ought to be intermixed with the reft, and kept divided from one another, by interpofing thofe of the other Negroes, who by this means would become continual fies upon their conduct. A particular attention fhould alfo be had to their plays, for thefe have always been their rendezvous for hatching plots, more efpecially whenever on fuch occafions any unufual refort is obferved of their countrymen from other plantations; and very particular fearch thould be made after their obeiah-men, who, whenever detected, fhould be tranfported without mercy. The employers of this deteftable race owe thefe cautions at leaft to the public, who have fuffered fo much in times paft from the total neglect of them. From the foregoing detail, which I have given upon the moft credible and authentic teftimonies in my power to procure, every candid perfon may judge, with how little regard to truth the infurrections, that have happened in Jamaica, are alcribed to extraordinary cruelties exercifed over the flaves in that ifland; I think it will appear from inconteftable proofs, that fo impudent a calumny could have no other foundation than malevolence, complicated with ignorance.

> C H A P. IV.

\section*{FRANCIS WILLIAMS.}

IHave forborne till now to introduce upon the fage a perfonage, who made a confpicuous figure in this ifland, and even attracted the notice of many in England. With the impartiality that becomes me, I fhall endeavour to do him all poffible juftice; and thall leave it to the reader's opinion, whether what they fhall ditcover of his genius and intellect will be fufficient to overthrow the arguments, I have before alledged, to prove an inferiority of the Negroes to the race of white men. It will by thistime be dilcsevered, that I allude to Francis Williams, a native of this ifland, and ion to John and Dorothy Williams, free Negroes. Francis was che younget of
PPP2 thre
three fons, and, being a boy of unufual lively parts, was pitched upon to be the fubject of an experiment, which, it is faid, the Duke of Montagu was curious to make, in order to difcover, whether, by proper cultivation, and a regular courfe of tuition at fchool and the univerfity, a Negroe might not be found as capable of literature as a white perfon. In fhort, he was fent to England, where he underwent a regular difcipline of claffic inftruction at a grammar fchool, after which he was fixed at the univerfity of Cambridge, where he ftudied under the ableft preceptors, and made fome progrefs in the mathematics. During his abode in Eugland, after finifhing his education, it is faid (I know not with what truth) that he compofed the well-known ballad of " Welcome, welcome, brother debtor, ঔc." But I have likewife heard the fame attributed to a different author. Upon his return to Jamaica, the duke would fain have tried his genius likewife in politics, and intended obtaining for him a privy feal, or appointment to be one of the governor's council; but this fcheme was dropped, upon the objections offered by Mr. Trelawny, the governor at that time. Williams therefore fet up a fchool in Spanifh Town, which he continued for feveral years, where he taught reading, writing, Latin, and the elements of the mathematics; whilft he acted in this profeffion, he felected a Negroe pupil, whom he trained up with particular care, intending to make him his fucceflor in the fchool; but of this youth it may be faid, to ufe the expreffion of Feftus to Paul, that " much learning made him mad." The abft:ufe problems of mathematical inflitution turned his brain ; and he fill remains, I believe, an unfortunate example, to fhew that every African head is not adapted by nature to fuch profound contemplations. The chief pride of this difciple confifts in imitating the garb and and deportment of his tutor. A tye perriwig, a fivord, and ruffled fhirt, feem in his opinion to comprehend the very marrow and quinteffence of all erudition, and philofophic dignity. Probably he imagines it a more eafy way of acquiring, among the Negroes, the reputation of a great fcholar, by thefe fuperficial marks, which catch their eye, than by talking of Euclid, whom they know nothing about.
Confidering the difference which climate may occafion, and which Montefquieu has learnedly examined, the noble duke would have
made the experiment more fainly on a native African; perhaps too the Northern air imparted a tone and vigour to his organs, of which they never could have been fufceptible in a hot climate; the author I have mentioned will not allow, that in hot climates there is any force or vigor of mind neceffary for human action, "there is (fays " he) no curiofity, no noble enterprize, no generous fentiment." The climate of Jamaica is temperate, and even cool, compared with many parts of Guiney ; and the Creole Blacks have undeniably more acutenefs and better underftandings than the natives of Guiney. Mr. Hume, who had heard of Williams, fays of him, "In Jamaica indeed "they talk of one Negroe as a man of parts and learning; but 'tis " likely he is admired for very flender accomplifhments, like a parrot "who fpeaks a few words plainly." And Mr. Eftwick, purfuing the fame idea, obferves, "Although a Negroe is found in Jamaica, or " elfewhere, ever fo fenfible and acute; yet, if he is incapable of moral " fenfations, or perceives them only as beafts do fimple ideas, without " the power of combination, in order to ufe; it is a mark that diftin" guifhes him from the man who feels, and is capable of thefe moral " fenfations, who knows their application, and the purpofes of them, " as fufficiently, as he himfelf is diftinguifhed from the higheft fpecies " of brutes [d]." I do not know, if the fpecimen I thall exhibit of [d] The diftinction is well marked by Bifhop Warburton, in thefe words:
" rift, The Moral Sense: (is that) whereby we conceive and feel a pleafure in rigbt, and a
" diftate and averfion to ewrong, prior to all reflexion on their natures, or their confequences. This " is the firft inlet to the adequate ideca of morality; and plainly the moft extenfive of all. When in-
"ftinct had gone thus far, 2d, The Reasoning Faculty improved upon its dietates; for re-
" flecting men, naturally led to examine the foundation of this moral ferfe, foon difcovered that there
" were real, effential differences in the qualities of human actions, eltablifhed by nature; and, con-
" fequently, that the love and hatred, excited by the moral Senfe, were not capricious in their opera-
"rions; for that the effential properties of their objects had a fpecific difference." Hence arofe a fenfe of moral obligation in fociety, \&c. Divine Legation, voll. I. p. 37.
It is this inflinct which difrriminates manhind from other animals who have it not, whereas in other inftinctive impulfes all agree. But the queftion is, whether all the fpecies of the human kind have this inftinctive fenfe in equal degree? If the brutal inflinets impel the African to fatisfy his appetites, to run from danger, and the like; why does he not exhibit equally the tokens of this moral inffinct, if he really poffeffes it? would it not infenfibly have gained admittance into their habits of living, as well as the other inttin:7s, and have regulated and directed their general manners? But we have no other evidence of their pofiefing it, than what arifes from the vague conjectural pofitions, " that all men are equal, and that the difparity between one man and ano her, or " one race of men and another, happens from accidental means, fuch as artificial refinements, edu"cation, and fo forth." Certain however it is, that thefe refinements mult necefiarily take place, where the moral fenfe and reafoning faculty are molt abundant, and extenfively cultivated; but cannot happen, where they either do not exitt at all, or, are not diftributed in fuch due portion, as to work the proper afcendancy over the more brutal fecies of iunfinct.

\section*{J A M A I C A.}
his abilities will, or will not, be thought to militate againft thefe pofitions. In regard to the general character of the man, he was haughty, opinionated, looked down with fovereign contempt on his fellow Blacks, entertained the higheft opinion of his own knowledge, treated his parents with much difdain, and behaved towards his children and his flaves with a feverity bordering upon cruelty; he was fond of having great deference paid to him, and exacted it in the utmoft degree from the Negroes about him; he affected a fingularity of drefs, and particularly grave caft of countenance, to imprefs an idea of his wifdom and learning; and, to fecond this view, he wore in common a huge wig, which made a very venerable figure. The moral part of his character may be collected from thefe touches, as well as the meafure of his wifdom, on which, as well as fome other attributes to which he laid claim, he had not the modefy to be filent, whenever he met with occafion to expatiate upon them. Of this piece of vanity, there is a very ftrong example in the following poen, which he prefented to Mr. Haldane, upon his affuming the goverument of the ifland; he was fond of this fpecies of compofition in Latin, and ufually addreffed one to every new governor. He defined himfelf " a wobite man acting under a black ikin." He endeavoured to prove logically, that a Negroe was fuperior in quality to a Mulato, or other caft. His propofition was, that "t a fimple white or a fimple black complexion was refpectively perfect : but a Mulatto, being an heterogeneous medley of both, was imperfect, ergo inferior.'

His opinion of Negroes may be inferred from a proverbial faying, that was frequently in his mouth; "Shew me a Negroe, and I will thew you a thief." He died, not long fince, at the age of feventy, or thereabouts.
I have ventured to fubjoin fome annotations to his poem, and particularly to diftinguifh feveral paffages in the claffic authors, to which he feems to have been indebted, or to have had allufion ; there may be other pafflages which have efcaped my notice; 1 have added an Englifh tranflation in verfe, wherein I have endeavoured to retain the fenfe, without wilfully doing injuffice to the original.

VoL. II. \(\quad\) q q q
Of

Of cruel woes; fave thy victorious hand, Long fam'd in war, from Gallia's hoftile land; And wreaths of frefh renown, with generous zeal, Had freely turn'd, to prop our finking weal. Form'd as thou art, to ferve Britannia's crown, While Scotia claims thee for her darling fon; Oh ! beft of heroes, ableft to fuftain A falling people, and relax their chain. Long as this ifle fhall grace the Weftern deep, From age to age, thy fame fhall never fleep. Thee, her dread victor Guadaloupe fhall own, Crufht by thy arm, her flaughter'd chiefs bemoan; View their proud tents all level'd in the duft, And, while fhe grieves, confefs the caufe was juft. The golden Iris the fad fcene will fhare, Will mourn her banners fcatter'd in the air; Lament her vanquifht troops with many a figh, Nor lefs to fee her towns in ruin lie.
Fav'rite of Mars! believe, th' attempt were vain, It is not mine to try the arduous ftrain.
What! fhall an Etbiop totich the martial ftring, Of battles, leaders, great atchievements fing? Ah no! Minerva, with th' indignant Nine, Reftrain him, and forbid the bold defign. To a Bucbanan does the theme belong; A theme, that well deferves Buchanan's fong. 'Tis he, fhould fwell the din of war's alarms, Record thee great in council, as in arms; Recite each conqueft by thy valour won, And equal thee to great Peleides' fon. That bard, his country's ornament and pride, Who e'en with Maro might the bays divide: Far worthier he, thy glories to rehearfe, And paint thy deeds in his immortal verfe. We live, alas! where the bright god of day, Full from the zenith whirls his torrid ray: Bu wh the rage of his confuming fires, All fancy melts, all eloquence expires.

Yet may you deign accept this humble fong, Tho' wrapt in gloom, and from a falt'ring tongue;
Tho' dark the ftream on which the tribute flows, Not from the Jkin, but from the beart it rofe. To all of human kind, benignant heaven (Since nought forbids) one common foul has given. This rule was 'ftablifh'd by th' Eternal Mind; Nor virtue's felf, nor prudence are confin'd To colour; none imbues the honeft heart; To fcience none belongs, and none to art. Oh! Mufe, of blackeft tint, why fhrinks thy breaf, Why fears t' approach the Cafar of the Weft! Difpel thy doubts, with confidence afcend The regal dome, and hail him for thy friend: Nor blufh, altho' in garb funereal dreft, Thy body's white, tho clad in fable veft. Manners unfullied, and the radiant glow Of genius, burning with defire to know; And learned fpeech, with modeft accent worn, Shall beft the footy African adorn.
An heart with wifdom fraught, a patriot flame, A love of virtue; thefe fhall lift his name Confpicuous, far beyond his kindred race, Diftinguifh'd from them by the foremoft place. In this prolific inle I drew my birth, And Britain nurs'd, illuftrious through the earth; This, my lov'd ifle, which never more thall grieve, Whilft you our common friend, our father live.
Then this my pray'r-" May earth and heaven furvey " A people ever bleft, beneath your fway!"

FRANCIS WILLIAMS。
There is, in this performance, a ftrain of fuperlative panegyric, which is fcarcely allowable even to a poet. Bucbanan is compared with Virgil, and Mr. Haldane made equal to Achilles; nay, exalted Atill higher, for he is hailed the Cafar or emperor of America. The author has taken care, whilft he is dealing about his adulation, not to forget himfelf. His feech is reprefented erudite and modeft;

Qqq2
his

\section*{J A M A I C A.}
his heart is filled with wifdom; his morals are immaculate; and he abounds with patriotifm and virtue.

To confider the merits of this fpecimen impartially, we muft endeavour to forget, in the fiff place, that the writer was a Negroe; for if we regard it as an extraordinary production, merely becaufe it came from a Negroe, we admit at once that inequality of genius which has been before fuppofed, and admire it only as a rare phrenomenon.
"What woeful fuff this madrigal would be
"In fome ftarv'd, hackney fonneteer, or me!
"But let a Negroe own the happy lines,
" How the wit brightens! how the ftyle refines!
"Before his facred name flies ev'ry fault,
"A And each exalted ftanza teems with thought!"
We are to eftimate it as having flowed from the polifhed pen of one, who received an academic education, under every advantage that able preceptors, and munificent patrons, could furnifh ; we muft likewife believe it to be, what it actually was, a piece highly laboured; defigned, modeled, and perfected, to the utmuft fretch of his invention, imagination, and fkill.

Should we, or hould we not, have looked for fomething better from one, upon whom (to borrow his own phrafe) omnes artium, fcientiarumque dotes Atticarum in cumulum accefferunt? or, is it at all fuperior, in claffic purity of fyle and numbers, in fentiment and propriety, in poetic images and harmony, to any compofition we might expect from a middling fcholar at the feminaries of Weftminfter or Eaton? It is true, poita nafcitur, non fit: but the principal forte and excellence of this man lay in verfification; however, as I mean not to prejudge the caufe, I thall leave it to the fair verdict of a jury of critics. The Spaniards have a proverbial faying, "Aunque Négros "fomos ginte;" "though we are Blacks, we are men." The truth of which no one will difpute; but if we allow the fyfem of created beings to be perfect and confiftent, and that this perfection arifes from an exact fale of gradation, from the loweft to the highef, combining and connecting every part into a regular and beautiful harmony, reafoning them from the vifible plan and operation of infinite wifdom in refpect to the human race, as well as every other feries in the feale, we muft, 1 think, conclude, that,

\section*{BOOK III. CHAP. V.}

"Is kept in nature, and is kept in man.
"Order is heaven's firft law; and, this confert, "Some are, and muft be, greater than the reft."
C H A P. V.

S E C T. I.
An Abftract of the Jamaica Code Noir, or Laws affecting Negroe and other Slaves in that Ifland.-And, firft of, Penal Clauses. Anno
\(1606 \mathrm{~N}^{\circ}\). Straggling flaves, apprehended without a ticket (or pafs), are to be punifhed with moderate whipping.
2. Striking or doing violence to a white perfon (except by command of their mafter or employer, or in defence of his perfon or goods), punifhable at difcretion of two juftices and three freeholders, according to circumftances.
3. Stolen goods found in the cuftody of a flave一fuch flave on conviction of receiving, knowing them to have been ftolen, to fuffer death, tran fportation, difmembering [ \(b\) ], or other punifhment, at the difcretion of two juftices and three freeholders.
4. Wilfully returning from tranfportation, death.
5. Compaffing or imagining the death of a white perfon, and being attainted thereof by open deed (or ouvert act), before two juftices and three freeholders, deaitb.
6. [i] On complaint made to a juftice of any felony, burglary,
[1/] This inhuman penanty is entirely obfoiete, and never of late inflited. It is, howerer, reproachfut to the laws, and ought to be cexpurged. Fugitives were formerly punithed here with amputation of theier toes. This execrabic baibarity hindered them from rumaing away, but it preconteit them likewife from rendering effectual fervice to their owner; and for this reefon, perhaps, morc than from a jutt fenfe of its impropriety, it was difcontinued. Men are too offen difpofed to be cruel, of their o own depraved hearss; and it beconies a Chrifitian legilature not to inffame and encourrage, but to everefs as much as pofifible, this tanguinary diffolition, by giving example chroughourt its penal oridinances, of jufice is meres.
[i] The reafon of fiot allowing a jury, intend of this moile, probably was, the farcity of Whices fyread over the country, and that, in a time of infurrection and rebellion, the proceedings could not be ton fummary. The fummoning twenty or thirty Whites, in order to make fure of i: appearances on the panel, would have required too much time and delay, and have often been practicable. Add to this, that the Whites never confilered themfeives as the paries of the Blacki. The prefent mode, by two juftices, and three frecholders, five perfons in all, of whom the party immediately intereficd can never be one, who are indifferent and unbiaffed, and upon oath to judge uprightly, ace cording to evidence, is perhaps. fufficient to anfwer all the ends of impartial judicature with refpect
to thefe people.

\section*{J A M A I C A.}
robbery; burning of houres, canes; rebellions; confp1racies ; or other capital offences; the juftice is to iffue his warrant to apprehend the offenders, and for fummoning the evidence before him. The evidence of one flave to be admitted againft another flave; and if, upon examination, it appears, primá facie, that the offenders are guilty, he is to commit them to prifon, certify accordingly, and affociate himfelf with another juftice. Thefe two are then to cite three freeholders, intimating the caufe, and appointing a certain day and place for the trial to be held; and if, upon full and due hearing of the matter (the freeholders being firt fworn, by the juftices, to judge uprightly, and according to the evidence), they deem the culprits guilty, judgement is then forthwith to be given, of death, tranfportation, or other punihment, as they, in their judgement, fhall think meet to inflict.
7. All petit crimes, trefpaffes, and injuries, committed by a flave, are to be heard and determined by any of his majéty's juftices within the ifland.
471 15 8. Slaves, deftroying fifh by poifoning, ufing nets of meihes lefs than one inch and a quarter, or deftroying turtle eggs, or killing pigeons, in the months of May, June, or July, are punifheable with \([k]\) tbirty-one lafhes on the bare back, on conviction before a juftice of the peace.
9. To put a fop to the wanton flaughter of old breeding cattle and marked young ones, with other abufes of the like fort, no flave to keep any horfes, mares, mules, affes, or cattle, on penalty of forfeiting the fame.
10. No flave to hire himfelf out to work to another, without confent of his owner, or employer. Penalty, upon conviction before a magiftrate, whipping at the magiftrate's difcretion, not exceeding thirry-one lafles [ \(k\) ].
11. Hawking about and felling goods [ [] (except provifions, fruits, and other enumerated articles) to be punifhed,
\([k]\) By the Jewifh laws, a wicked man, worthy to be beaten, was to be beaten before the judge, according to his fault : forty ftripes might be inflicted; and not to exceed. Deut, xxv. 3. In 2nother place, we are told, the punifhment was forty fripes, fave ore. Numb. xxv.
[1] This reltraint is conftrued to extend only to beef, veal, mutton, and falt-fih; and to manufactures, except bafkets, ropes of bark, earthen pots, and fuch like.

\section*{BOOK III. CHAP. V.} exceeding thirty-one lafbes. See \(\mathrm{N}^{\circ} 20\).
12. Selling, or giving away, fugar or fugar-canes, without a ticket; on conviction, whipping as above.
13. Free perfons, or flaves [ \(m\) ] buying fuch goods, to forfeit \(10 l\), and fuffer punifhment by whipping, not exceeding trwenty la/bes. a native of the ifland, or refident in it three years from the time of importation, running away and abfenting himfelf for fix whole months, is to be tried as for a capital offence; and, upon due proof and conviction; is to fuffer death, or fuch other punifhment as the court fhall think fit to adjudge; provided that profecution be commenced within three months after his being taken or returned ; and, further, that no owner thall be repaid for any flave fo executed, but that the lofs fhall fall upon fuch owner [ 0 ].
\[
15 \cdot \mathrm{~A}
\]
[ \(m\) ] Some Jews, however, have been known to accunnulate feveral cafks of fugar in a year, purloined, in finall quantities at a time, by the Negroes, who were handfomely rewarded for robbing their mafters.
[ \(n\) ] There feems a great degree of hardhip on the face of this claufe, in fubjecting flaves to the penalty of a capital crime, who perhaps may be ignorant of the penalty they incur. The policy on which it is founded is, that all penal laws are made in terrorem, and for prevention: fo is this. If one flave might elope into the woods, there abide with impunity, and form a fettlement; fo might ten thoufand, to the ruin of the colony. A law to the fame effect, paffed thirty-two years before, fet forth, "that many crimes, committed by flaves, which were punifhable with "death, often remained undetected, by omiffion of their owners to profecute.". The owner is neceffarily the profecutor; and the provifo, which fubjects him to the entire lofs of the value of his flave, if he profecutes to conviction, effectually prevents. fuch profecutions from being commenced; for which reafon, this claufe is felo de \(\sqrt{\text { e }}\), and utterly non-effective. And, confidering the feverity which it breathes, it is beft it fhould be fo; or elfe be repealed, and the punifhment altered to tranfportation: for to inflict deatb on a poor wretch, for a tranfgreflion, committed perhaps through mere ignorance of the law, or enormous ill ufage, is highly tyrannical and cruel.
\([0]\) It feems to be an imperfection in thefe claufes, that the punifhment is, in many cafes, left undefined and arbitrary. The plain meaning of the legiflature in the fructure of them, where an alternative is admitted, was to give room for a mitigation, or commutation of the penalty expreffed, according to the circumplances of each cafe, and the greater or lefs degree of guilt that might appear. This was commendable, and confonant to the penal claules which govern the navy and army of Great-Britain. Bur it is a great defect in them, not to require thefe reftrictions, and penalties, to be duly promulgated among the Negroes; for how can they reafonably be condemned upon laws which they never fee or know? Unlefs they are duly apprized of what

\section*{J A M A I C A.}
15. [价A flave, harbouring, concealing, or entertaining, a runaway flave, knowing bim to be fuch, upon due conviction and proof before two juftices and three freeholders, to fuffer death, or be otherwife punifhed at the difcretion of the court; provided that the profecution be commenced within one month next after the difcovery of fuch offence.
16. [g] Slaves, hunting cattle, horfes, mares, \&c. with lances, guns, cutlaffes, or other inftruments of death, unlefs in company with their mafter, \&ic. or other white perfon by him or them deputed, on conviction before two jutices and three freeholders, to be adjudged guilty of felony, and be tranfported.
17. No flave to carry fire-arms about the ifland without a ticket from his owner or employer, under penalty of fuch corporal punifhment (not extending to life or limb) as two juftices thall think meet to inflict.
18. [ \(r\) ] A perfon killing a flave in the fact of ftealing, or running away, or found in the night out of his owner's or employer's eftate, or on the road, and refufing to fubmit, fuch perfon not liable to action or damage for the fame.
they ipe to do, and what they are not to do, and are admonifhed of the certain punihment they will incur by doing fo and fo; thefe unlettered favages might as well be condemned on the laws of Japan or Crim-Tartary. I fhould, however, have excepted this particular act, which the cufos of every parinh is directed to take the moft effectual methods for making public.
[ \(p\) ] So, Exod. xxi. 16, "He that llealeth a man, and felleth him, or if he be found in his hand, "he fhall furely be put to death." This, I prefume, extended as well to ftealing another Jew's flave, as fealing a fellow-Jew, in order to fell him for a flave to a Gentile nation. By ver. 8 , it appears, that a Jew might fell his own daughter for a flave, cxcept to a Gentile or flrange nation Deut. xxiii, \(\mathrm{I}_{5}\). "Thou fhult not deliver unto his mafter the fervant which is efcaped from his " mafter unto thee." "He fhall dwell with thee." This muft be underftood of a flave belonging to a ffranger, or Gentile, and not to a brother Jew ; for, otherwife, it would be repugnant to the fenfe of the preceding ftatute.
[q] By act 14 George II. cap. 6, ftealing of fheep and cattle is made felony without benefit of clergy. And 15 George II. cap. 34, explaining the former act, declares fheep and cattle to extend to any bull, cow, os", fteer, bullock, heifer, calf, and lamb. So horfe-ftealers are excluded from clergy.
[ \(r\) ] So, Exod. xxii. 2, 3, "If a thief be found breaking-up" in the night, "and be fmitten that " he die, there fhall no blood be fhed for him." But, it in the day-time, fuch killing is murder. The penalty on the thief, in this cafe, is reftitution of the things ftolen, or the value; or, having not wherewithal to pay the value, then to be fold for a flave.

\section*{BOOK III. CHAP. V. 489}
19. A flave, malicioufly giving poifon to any fiee perfon, or flave, and being convicted thereof before two juitices and three freeholders, to be adjudged guilty of murder, and to fuffer death.
20. A flave, felling in any public place, or market, any other goods than fuch as properly belong to his owner, or for his owner's ufe, and that are not expreffed in a ticket, upon complaint and conviction before a juftice, to be whipped by order of fuch juftice. See \(N^{\circ}\) I I.
1,60 21. [s] Obeiah-men, pretended conjurors, or priefts, upon conviction before two juftices and three freeholders of their practifing as fuch, to fuffer death, or tranfportation, at the difcretion of the court.
22. Slaves, convicted before two juftices and three free holders of having in their cuftody fire-arms, gun-powder, bayonet, fword, or other military offenfive weapon (except in company with, or under the direction of, a white perfon, or having a ticket, or licence, in writing, from theirowner, overfeer, or employer), to fuffer death, or other punifhment, at the difcretion of the court.
\({ }_{1} 768\) 23. Slaves, attempting to defert from the ifland in any fhip, boat, \&rc. and being convicted before two juftices and three freeholders, to fuffer death, or other punifhment, at the difcretion of the court.
1769 24. Slaves, taking ftones or ballaft from the Pallifadoes, imprifonment, not exceeding three months.
25. Slaves, found felling frefh-fifh in any part of Kingfton, except at the fifh-market, within the market-hours of eight in the morning and two in the afternoon, punifhable at the difcretion of any of the magiftrates in that parifh; and fuch fifh to be forfeited, and diftributed to the poor.
[s] Many of thefe incendiaries, called marbûts, or marabouts, on theacoaft of Guiney, are bae nilhed from their own country for mal-pratices.

SECT.

\section*{J A MAICA.}

\section*{S E. C T. II.}

\section*{Difributive and Munerary.}

Anno.
1. Male flaves are to have jackets and drawers; and female flaves, jackets and petticoats; fupplied them once a year, under penalty of five fhillings, to be paid by the owner or mafter for every default \([t]\).
2. Conftables are to prefent all fuch defaulters every year to the juftices; and fuch conftables to be charged on oath, by the juftices, to do their duty herein.
3. All mafters, owners, \&c. are to have \([u]\) one acre of ground, well planted with provifions, for every five flaves belonging to them, under penalty of 40 s . for every fuch acre deficient.
4. Gaol-keepers, having cuftody of run-away flaves, are to fupply them with convenient food, water, and dry lodging, on penalty of \(40 \%\) for every default.
5. A flave, taking up a run-away, and bringing to the owner or to the next gaol, thall receive one fhilling per mile for the firft five miles, and eight-pence per mile for every other, fo that the whole does not exceed 40 s . And any perfon, depriving or defrauding the flave of fuch reward, fhall forfeit treble the value.
6. A flave, taking prifoner or killing a rebellious flave, to receive 40 s., and a coat with a red crofs upon it. By a fubfequent act, the reward is raifed to \(10 \%\).
7. Female convicts, pregnant, to be refpited from execution until after their delivery.
[t] On every well-regulated plantation they are allowed, befides a fuit of warm woollen cloaths, hats, caps, checks, handkerchiefs, working aprons to the boilers, beads, needles, thread, knives, fciffars, pipes, tobacco, iron pots, falt, fugar, rum, \&c. As to holiday-fuits and finery, the fettled Negroes are very able to afford them out of their own profits. Tradefmen and chief Negroes receive a ftated weekly allowance of beef, herring, or falt-fif ; the reft occafionally. Every fuch eftate has a convenient hofpital for the fick; where they are duly provided with medicines, nurfes, and fuitable diet, and neceffaries.
[u] In England one acre of good land is deemed fufficient to maintain four perfons, or three oxen, or two affies, or twelve fheep. The fuperior fertility of the Weft-India land makes a confiderable difference.

\title{
8. All mafters, miftreffes, owners, employers, \&c. are to endeavour, as much as poffible, the inftruction of their flaves in the principles of the Chriftian religion; and facilitate their converfion; and do their utmoft to fit them for baptifin; and, as foon as convenient, caufe all fuch to be baptized as they can make fenfible of a Deity, and the Chriftian faith [w]. \\ 9. The juftices, at their firft feffion in every year, are to appoint the number of holidays to be given to flaves at Chriftmas, Eafter, and Whitfuntide \([x]\).
}
[w] All the Creole flaves ought to be baptized, under a high penalty on their owners for neglecting it; and the baptifmal fees fhould be fixed by law at a low rate; for example, at fix-pence each; which, fuppofing there are now one hundred thoufand unbaptized Creoles in the ifland, would bring in to the clergy there 2500 l .
"In all civilized itates two things may be obferved, which may be confidered as the great foun"dation and fupport of political fociety : the firtt of thefe, the ceremonies that accompany the " union of a man with a woman, which fix and regulate the ties of marriage, and the flate of chil"dren ; the fecond, the ceremonies of public worhip folemnly paid to the Deity. Thefe two " have been found, by legiflators, the wifert and moit effectual means for the fupport and good go"vernment of flates." Goguet.
[ \(x\) ] The Negroes are fo fenfible of their right to thefe, and theit leifure-hours of each day in the intervals of work, that they call them emphatically their own time. Nor is it ever borrowed from them but in fome very particular emergency, when they are either paid for it, as may be agreed upon, or allowed an equal portion of time on fome other day. They generally begin work at fix in the morning, and leave off at hix in the afternoon, having half an hour at breakfait, and on moft eftates two hours at noon. Thus their day's work is nine hours and a half in general. Their leifure-times, on molt eftates, are Saturday afternoon, except in cafe of very urgent bufinefs; every Sunday throughout the year; three days at Chriftmas, two at Eafter, and two at Whitfuntide; and, at fome eltates, a jubilee-day, on finifhing crop: fo that the whole number of days, they have to themfelves in the courfe of the year, is about eighty-fix. The Jews allow their flaves Saturday (which is their fabbath), and Sunday (which is the Chriitian's): their flaves have therefore about one hundred and eleven holidays in the year at leaft; which amount to more than thiree months out of the twelve. The ufual grofs value of a Neyroe's labour, hired per diem, being about two fhillings; a Chriftian's Negroe (fuppofing him not more confcientious than barbers, tavern-keepers, inn-keepers, ftable-keepers, and many fhop-keepers, are on the Lord's-day in England) gains for himfelf 8\%. 12 s . in value of his labour, and a Jew's flave \(11 \% .2 \mathrm{~s}\)., per annum. But it is well known, that many of them gain infinitely more, fince the produce of one day's labour for themfelves will turn out more worth than a fortnight's hire.
An ingenious writer obferves hereupon, "The principal time I would have referved, for indul" gence to the flaves, is Sunday, which is prophaned in a manner altogether fcandalous in our co" lonies. On this day fome pains fhould certainly be taken to inftruct them, to the beft of their "comprehenfion, efpecially the children, in fome of the principles of religion and virtue, parti"cularly in the humility, fubmiffion, and honefly, which become their condition. And, if one "whole day in the week, or two half-days at proper diffance, weee allowed for their private labour " in their grounds, in lieu of Sundays, they would more chearfully bear fatigue during the other
Rrra "fire
10. Slaves may carry about, and fell, all manner of provifions, fruits, frefh fifh, milk, poultry, and other fmall ftock of all kinds, having a ticket from their owner, or emplayer.
11. No flave to be difmembered at the will and pleafure of his owner, mafter, or employer, under penalty of \(100 \%\) payable to the informer.
1751 12. [y].

\section*{S E C T.}
". five days; and, by means of thefe intervals, have time to recruit their ftrength, fo as, on the "d days appropriated to their mafters labour, to go through more work, and perform it better, than " they commonly are able to do under their prefent regulations; for it is eafy to conceive, that, " with moderate intervals of relt, any man will better, and with lefs hust to his body, execute a " given quantity of work, than he can polfibly perform without them; fo that, at the week's end, "the fame quantity of labour, at leait, would be gone through, with no injury to their healths, " nor watte of fpirits, which is now poffibly pexformed with injury to both. With a tincture of ". religious precepts, as far as can be adapted to their capacity, they would grow more honeft, "tractable, and lef's of eye-fervants; unlefs it can be proved (contrary to univerfat experience), "that the fanctions of religion, and doctrines of morality, and all the habits of an early inftuc" tion, are of no advantage to mankind." Thefe opinions are founded in policy and truth; but difficulties would attend the adoption of them in practice, although far from being infurmountable. It is certain, that the fabbath-day, as at prefent it is paffed, is by no means a day of refpite from labour : on the contrary, the Negroes, either employing it in their grounds, or in traveiing a great diffance to fome market, fatigue themfelves much more on that day, than on any other in the week. The forenoon of that day, at leant, might le given to religiuus duties; but \(I\) think it rather defirable than otherwife, that the after-part of it fhould be fpent in their grounds, inftead of being ufelefsly diffipated in idienefs and lounging, or (what is worfe) in riot, drunkennefs, and wickednels. If fuch an alteration flould take place, Thurfday might be affigned for the marketday, inftead of the fabbath, and prove of great advantage to all the Chriftian fhop-keepers and retailers; the Jews now engrolfing the whole buineis of trafficking with the Negroes every Sunday, at which time there is a prodigious refort of them to the towns, and a valt fum expended for drams, neceflaries, and manufactures. This aleration would therefore place the Chriftian dealers upon an equal, fair footing, which they do not at prefenc enjoy. The whole number of Negroe holidays in the year would then amount to one hu dred and eleven, which is no more than the Jews at prefent allow to their flaves; and, by this divifion of the time, they would probably grow improved in their behaviour, as well as in their ability and willingnefs to ferve their Chrittian owners.
[y] So, Exod. xxi. 20, 21. "If a man finite his fervant with a rod, and he die under his "hand, be fhall forely be punified." But in what manner the text does not explain; though it is

\section*{Remarks on the Negroe Regulations.}

THE Negroe code of this ifland appears originally to have copied from the model in ufe at Barbadoes; and the legiflature of this latter illand, which was the firft planted by the Englifh, reforted to the Englifh villeinage laws, from whence they undoubtedly transfufed all that feverity which characterizes them, and hews
evident no capital punifment is here meant. But, "If he continue a day or two" alive, "he thall " not be punifed; for he is his money." Strange (fays Montefquieu), that a civil law fhould thus relax the law of nature!

One Lockwood (who was afterwards proved to be a lunatic) inhumanly butchered his flave; which gave rife to this act. I remember one inftance of a man convicted uponit; and, it being his firft offence, he was burnt in the hand.

By the law of Pennfylvania, a white owner, who kills his Negroe flave with malice prepenfe, is liable to fuffer dratb for it. There is not, however, any example there of an owner having been executed for this crime. A few years ago, a mafter murdered his flave; upon which, his friends, and even the magiftrates, fecretly advifed him to leave the country, as, otherwife, they could not avoid apprehending him; in which cafe, he mult be adjudged to die, according to the law, without any hope of faving him. This lenity (fays Kalm) was employed, that the Negroes might not have the fatisfaction of feeing a maiter executed for killing his flave; for this would lead them to dangerous defigns againft their malters, and to fet too high a value upon themfelves. I muft beg leave here to differ a little in opinion from this writer. An impartial execution of juitice, and the law, upon thofe who wantonly fhed innocent blook, mur inevitably attract a high veneration to fuch a law from the Negroos, and induce them to regard murder in the moft atrocious light, when they fee it punifhed wih fuch exemplary fevenily without refpect of perfons; for, furely, no pretence can juflify fuch execrable deeds: the guilty perion puts himielf our of all protection of human law, when he commits the crime; he ceates to be confidered as a man; he becomes a favage beaft; and, whatever may be his complexion, the good of fociety and found policy require he fhould fuffer capitally, as an example of terror to Black as well as White. At prefent, a Negroe fees only what may juftify him in retaliation. The law of the 14 hites plainly tells him, "If a white man murders a white man, he ought to die for it; but, if a white " man murders a black man, he ought to he acquitted!" Is not the Negroe led to efpoufe the very fame principle and creed ax conterfo? "I believe," he may fay, "that it is a very great " crime for a Negroe to murder a Negre e; but for a Negroe to murder a white man is no crime " at all; at leait, I infer as much from the law of the Whites, which mealures the extent of guilt,
" not according to reafon, but according to the tincture of the fkin; they tavour the White, and "we the Black, with equal propriery and juffice."

It was, I think, very much to the honour of government, that the following inftrustions were given to fome of the firft commanders in chief of this itland:
" You fhall endeavour to get a law paffed for reftraining of any inhuman. feverity, by reafon of " ill mafters or overfeers, tliat may be ufed towards their Chriftian fervants, or other flaves. And"
"you are allo, with the affiftance of the council and affembly, to find our the beft means to faci"litate and encourage the converfion of Negroes to the Chriftian religions"
the abject flavery which the common people of England formerly laboured under. In the \(34^{\text {th }}\) of Edward III, for example, a labourer, or flave, fleeing from his mafter's fervice into any town or city, the chief officer of the place was required to deliver him up to his mafter; fo, if he eloped into another country, he was to be burned in the forehead with the letter \(F\). Whoever ferved in hufbandry till the age of twelve, was to continue in that fation ever after; and not be bound or put out to any trade, or artifice. By another act, 12 Richard II, anno 1388 , no artificer, labourer, or fervant, was allowed to pafs from one hundred to another, without a permit under the king's feal, unlefs fent on bufinefs by his lord, or mafter, on pain of being fet in the ftocks, and compelled to return. But the moft remarkable badge of fervility was impofed, in the 1 ft of Edward VI, by the ftatute againft vagabonds; which adjudges them abfolutely and exprefsly flaves; inflicts feveral violent punifhments, by beating, chaining, \&cc. to force them to work for their owner; punifhes run-aways, for the firft offence, by branding on the cheek with a red-hot iron; and, for the fecond offence, by death. This law likewife empowers the mafter to put an iron ring about his flave's neck, arm, or leg, for fafer cuftody; and lays a penalty of \(10 \%\) on any perfon taking it off without the mafter's confent. A man, detaining or harbouring another's run-away flave, knowing him to be fuch, is made liable to an action of trefpafs, and iol. damages. The fervice of fuch flaves might be hired out, fold, or bequeathed, as any other moveable goods and chattels. And any fuch flave, confpiring to murder, kill, or maim, his mafter or miftrefs, or to burn their houfes, barns, or corn, lying in wait with a weapon, or committing any overt act leading to fuch effect, was to fuffer death as a felon. If the father, mother, nurfe, or bearer about, of a child

\footnotetext{
"And whereas, amongit other laws paffed in Jamaica the 5 th of April, 1683 , an ant for reguul lating flaves was tranfinitted unto his late majefty, who did not think fit to confirm the fane, by " reafon of a claufe therein contained, whereby fuch, as wantonly and wilfully kill a Negroe, * are only liable to a fine and three months imprifonments; which penalties, not being equal to . 66 the guilt, might encourage the wilful fhedding of blood; for which it is neceffary fome better " provifion be inade, to deter all perfons from fuch acts of cruelty; you are therefore to fignify * the fame unto the next affembly, and further propofe to them the enacting a fricter claufe in «s. that behalf, which may be fit for our royal confirmation." The law is certainly not yet fevere .ęnough in this refpect.
}

\section*{BOOK III. CHAP. V.}
adjudged a flave, fhould fteal, or entice, away fuch child from its mafter; fuch father, mother, \&c. were to be adjudged flaves to fuch child's mafter for ever. I think the word flave occurs no lef's than thirty-eigbt different times in the courfe of this ftatute. But this is not the only inflance of legiflative barbarity at home. In the 13 th of Elizabeth, 1571 , upon reading a bill then before the houfe for fuppreffion of vagabonds, Mr Sandys endeavoured to prove the above-mentioned law of Edward VI. to be too fharp and bloody, fanding much on the care which is to be had for the poor. Wilfon, mafter of the requefts, argued thus: that poor, of neceffity, we muft have; and as true it is, that beggars by God's word might not be among his people, ne jit mendicans inter vos; that it was no charity to give to a flranger; and that even as thieves did the Greeks judge of them. In the following year, the law pafied which enacted, "that every perfon above the age of fourteen, " being taken begging, or going about as a vagrant, fhould, for the "firtt offence, be grievoufly whipped, and burned through the "griftle of the right ear with an hot iron of an inch compafs; " and, if of eighteen years of age, if he afterwards fall into a "roguifh life, to be adjudged a felon." A flatute of 8 Elizabeth, c. 3, enacted, that perfons, bringing, delivering, fending, receiving, or taking, or procuring to be brought, \&c. into any fhip, or bottom, to be carried out of the kingdom, any ram, theep, or lamb, alive, fhould, for the firft offence, forfeit all their goods for ever, fuffer a year's imprifonment, and at the year's end have their left hands cut off in a market-town, to be there publickly nailed up; and, for the fecond offence, fhould fuffer death. The modes of punifhment in there ftatutes, and the general provifions contained in the flatute of Edward VI, have fo near an affinity to the Barbadoes law refpecting Negroe flaves, as to leave fcarcely any doubt but that the legiflature of that ifland tranfcribed from thefe precedents, which they found in the mother flate. At the time we firft entered on the fettlement of Barbadoes, the idea of flavery could hardly be extinguifhed in England; the firf emigrants to the Weft-lndies, it is natural to think, carried with them fome prejudices in favour of the villeinage fyftem, fo far as it might feem to coincide with the government of Negroe-labourers. They
perceived very frrong traces of it in the before-cited fatutes; and the expediency and propriety of rigorous penalties, were pointed out to them, from time to time, after the reign of Elizabeth, by the ftar-chamber judgements. Many other veftiges befides remained ftill frefh in the mother-country, which were fupported by law ; in the regulation, difcipline, and punifoment (for extmple) of vagabonds, of labourers, of apprentices, of foldiers, feamen, the workers in coal and faltmines; all which favoured much of the antient coercions under which they had lain, and which indeed to the prefent hour have been little more relaxed, except by mitigating the cruelty of fome punifhments, and giving a protection in life and limb againft wanton violences, which in truth is no contemptible triumph over the extreme feverity of their primitive bondage. The penal laws in England were always fanguinary, and ftill retain this favage complexion; which has given occafion to an ingenious author to affert, "that they feem "rather calculated to keep Jlaves in awe, than to govern freemen; "they feem to contradict all notions of juftice, and confound all "diftinctions of morality. By the ignominy they impofe in many "cafes, they bend the mind to the loweft fate of fervitude; by the "rigour thay indifcriminately inflict, they adopt the principles of "defpotifm, and make fear the motive of obedience \([z]\)."

One of the greateft imputations againft the Negroe laws is, that, in many cafes, they leave the punimment to be inflicted arbitrarily by their judges. This is precifely adopted from the law-martial, enacted for the difcipline of the fleet and army, which leaves the punifhment to be invented, as well as proportioned, by the court. The Negroes in our colonies might, perhaps, have fared better, if their mafters had taken the Athenian flave code for their guide, inftead of ranfacking the flatute-law of England for modes of judging and chaftizing them. But the idea of affimilating to the practice of the mother-ftate influenced them to this conformity in thofe points, which perhaps lefs merited their imitation than any other. It was a further difadvantage, that the firft form of government, exercifed in thefe colonies, was of the military kind; whofe fanctions did not tend in the leaft to diminifh their judicial afpe-
[z] Confiderations on Criminal Law.

\section*{BOOK III. CHAP. V.} rity. The Africans, firf imported, were wild and favage to an extreme: their intractable and ferocious tempers naturally provoked their mafters to rule them with a rod of iron ; and the earlieft laws enacted to affect them are therefore rigid and inclement, even to a degree of inhumanity. By what means it happened, that, from the firf colonization in the Weft-Indies, this race of men were fo degraded as we find them, is not entirely clear. The Englifh, probably, did no more than follow the fteps of the Portugueze and other nations, who had begun, long before, to trade in Negroes as a commodity, and to hold them as mere chattels and moveables. Perhaps the depravity of their nature, much more than their colour, gave rife to a belief of their inferiority of intellect ; and it became an eftablifhed principle to treat thofe as brute beafts, who had fo little pretenfions to claim kindred with the human race, except in the fhape of their bodies, and their walking upon two legs inftead of four. However it might be, certain it is, that the planters of that age thought it no greater crime to kill a Negroe, than to knock a monkey on the head.

So foon as the African trade became a national concern, from its importance, the parliament of Britain fell in with the general idea, and confidered Negroes, purchafed from that continent, as a lawful commercial property ; and this in fo ftrong a fenfe, that the greateft oppreffion, under which our Negroes in the inands at prefent labour, arifes materially from the ordinance of that ftatute \([a]\), which declares them to be as houfes, lands, hereditaments, afiets, and perfonal eftate, transferrable, and amenable to payment of debts due to the king or his fubjects. Since the major part of thefe Negroes, efpecially in the older colonies, by having been born and trained up in them, have appeared more humanized than their anceftors, the laws in thefe places have worn a milder afpect: yet, as thoufands are every year introduced from Guiney, who differ not at all from the earlieft imported in barbarity of manners; fo the feverity of the firft inftitutions has ftill been retained in feveral refpects, which chiefly affect the Blacks of this c!afs, although all are equally bound by them without exception. This obfervation leads me to enquire, whether fome diftinction might not be taken,

Vol. II.
[a] 5 Geo. II. c. 7 . and likewife I3 Geo. III. c. 14 .
S s s
by our colony-laws, between the native or Creole Blacks and the imported favages; and whether the laws might not be mitigated in favour of the former clafs, and (without a weak or effeminate indulgence) be fo tempered, as to make their fervitude approach near to a well-regulated liberty. This would confift in giving them fuch a fecurity for life and limb, and fuch an attachment to the place of their birth, as may ferve to fweeten their toils, and engage them by the ftrongeft ties to be faithful fervants and defenders of the country. All punifhments by mutilation fhould be utterly abolifhed and prohibited, becaufe they are fcandaloufly cruel, not warranted by neceffity, nor juffified by utility; for it cannot be proved, that they are more effectual than more humane methods; and, when the laws of any country either dictate fuch inhumanities, or connive at them, they lend encouragement for individuals to feed a bloody and vindictive fpirit, which is difgraceful to the members of a civilized fociety.

The punifhment by whipping fhould be brought within fome limit; fo that overfers might not with impunity tranfgrefs, through the heat of rage, a fit degree of juft correction; and as the degree, fo the infrument, fhould be afcertained, and none permitted which may lacerate or disfigure the body.

A white perfon, found guilty of wantonly murdering a Negroe, fhould be adjudged a felon, and fuffer death. If convicted of wantonly maiming or difmembering (death not enfuing), and the owner be the offender, the flave fo maimed fhould be adjudged to enjoy his freedom, befides a compenfation for his mainteuance, if he thould be fo difabled as to be incapable of earning a livelihood. But, if the offence fhould be committed by another perfon, fine and imprifonment, with an adequate fatisfaction in money to the owner, may be thought no inequitable punifhment.

The penalty of deatb for running away, or abfenting for a certain fpace, thould be commuted to fome milder for the firft offence; and, for the fecond, tranfportation: but the inveigling, harbouring, and concealing, fuch fugitives, might remain under the fame rigorous penalties as at prefent.

The fevereft punifhments ought, in juftice and policy, to fall on rebels, murderers, confpirers againft the public tranquility, inceadiaries,

\section*{BOOK III. CHAP. V.}
cendiaries, and rioters; runaways, found carrying unlawful weapons; and fuch as ftubbornly and wilfully refufe to labour; for it is in confiftent with the general welfare, that any fhould be rebellious, guilty of outrage and violence, idle, or vagrant.

Lenity in fome points, rigid feverity in others, protection to the well-difpofed, and difcouragement to the abandoned and difaffected, might prove the means of polifhing their manners, inciting them to induftry, and enfuring their voluntary obedience. But nothing would more effęually operate to thefe purpofes, than the admitting fome alteration in the prefent laws for recovery of debts.
I have already pointed out, that making Negroes liable to be feized for bond and fimple contraet debts, and hurried from one part of the ifland to another, conftitutes the chief oppreffion under which they labour; renders their fervitude more bitter, and intolerable; and produces a very great annual lofs to the public, by the mortality which it occafions.
I am fenfible, that the exigency of commercial contracts, and the mixt nature which the laws of commerce have affigned to Negroes, combat ftrongly againft an alteration. But the law of humanity, and the general intereft of the ifland, plead more forcibly in favour of it; and fince the utmoft a creditor can defire, is the payment of his debt, or as good fecurity for it as his debtor can give, no injury is done him, by changing an oppreffive mode, for one that is not fo.
If, for example, Negroes were made glebio adjcriptitii, affixed to the foil, and only liable to pafs with it ; it is evident, they fill might pafs in defcent, or payment of contracts, or in fale. If bonds and fimple contracts were left to take their remedy folely againft other perfonal afiets, or againft the produce of the Negroes labour ; or, thefe proving deficient, that then the whole eftate, land, and Negroes, were liable to be fold collectively, for yielding full fat fo faction; would the bond or fimple contract creditor be put into any worfe fituation than a mortgagee, who has at prefent identically the fame remedy? Perhaps no fcheme might anfiwer the intention better, than the committing debtors eftates in truft, as I have propofed in the courfe of this work: a variety of plans indeed might be formed, for faving the creditor harmlefs; none however could be
\[
\text { S } 1 \int_{2} \text { carried }
\]
carried into execution, unlefs the act of parliament, before cited, was firft new modeled, and Negroes, more efpecially the natives of our iflands, diftinguifhed fome degrees above fheep and oxen. To make this improvement in the fyftem of our colony laws, were furely not unbecoming that liberal fpirit, which dignifies the prefent age : but the reform fhould begin at bome; and doubtlefs would without difficulty be affiented to by parliament, if the provincial affemblies were, upon the conviction of its utility, to facilitate their concurrence, by fubftituting an equivalent fecurity to the creditor. The circuity of action and delay, that attend recovery of mortgage debts, might probably be abridged, and mortgage deeds be made as negotiable in commerce, and as fummary in their procefs, as common bonds; nor is there any juft reafon to be affigned, why that mode of fecurity fhould not then be given for a debt of fifty pounds, as well as for five hundred pounds; in the colonies, many obftacles, that prevail in the mother country, are removed at once by the office where fuch contracts, and their affignments from hand to hand, are duly regiftered. So long as Negroes are feverable from the land, every colony is retarded in its progrefs; for, as I have before remarked, it matters not (in a general view) how often the ownerfhip of a Weft-India eftate changes hands, provided the Negroes pafs with the land; but it is their feverance from it, which is effentially a depreciation of both, and extremely hurtful to the progrefs of induftry and fettlement in thefe iflauds, particularly in Jamaica, where property
" puncto mobilis horæ
"Nunc prece, nunc pretio, nunc vi, nunc morte fupremâ,
"Permutat dominos, et cedit in altera jura \([6]\) ]."
"Shifting every hour,
"By gift, by purchafe, force, or fate's commands,
"Changes its lord, and falls to other hands."
To afcertain the Negroes who fhould pafs in this manner, would not be difficult; fince every planter and landholder might be compelled to deliver annually to the juftices and veftry upon oath, a lift of the Negroes bona fide belonging to, and fettled upon, his refpective lands; and where any doubt or difpute might arife, the onus probandi

\section*{BOOK III. CHAP. V.}
might lie on the landholder. It is true, it may be faid, that every landholder has the remedy at prefent in his own hands; he has only to make his contracts by mortgage, inftead of bond or note ; but the prolixity of mortgage deeds, which enumerate all the parcels of property, and contain a multitude of covenants and claufes, make them lefs convenient for ordinary tranfactions in borrowing and lending, efpecially for fmall fums; perhaps fuch deeds might be thortened without lofng their efficacy; but, if this be impraticable, we muft then turn back to the firft propofition, in regard to bonds, and give them effective operation againft the planter's cattle, furniture, and implements, or (thefe failing) againft the amual produce, by foqueftration, until they are fully fatisfied. The iniquitous advantages which have been taken of the laws, as they now ftand, are imnumerable : among the multitude of planters, fome will be found, whofe hearts are petrified with avarice, and rapacity; whofe views all center in felf; and who foar around with the keen appetite of vultures, feeking whom they may devour. I remember one of thefe harpies, who, in order to ftock his eftate with feafoned Negroes, went fyftematically to work. He engaged the deputy marflal in his intereft, and having bought up judgements, extant againnt feveral inferior fettlers in his neighbourhood, caufed their laves to be levied on, and fold; he himfelf was the underhand purchafer, and thus found means to advance his own fortune, upon the certain ruin of many induftrious fettlers, who threw up their lands after being ftripped of their labourers; and this furnifhed him with a further opportunity of driving advantageous bargains, by engroffing the contiguous acres at a cheap rate.

The fallacy of their opinion, who fuppofe, that no barm is dune by the fhifting of property, may be demonftrated in numberlefs inftances more than I have already given; and they all tend to prove thefe maxims: "That changing the property of lands from one " owner to another, can be of no injury to this ifland, in hindering. " the fettlement and improvement of thofe lands, fuppofing the fkill ss in hufbandry pretty equal at an average.
"But changing the property of labouring Negroes from one "o.rner to another, living in different places, obitructs the fettle6r ment of lands; turns thofe already fettled into ruinate; leffens the
" number of planters, diminifhes the fock of labouring Negroes, "s and produces a certain lofs to the community in vatious ways."

There is every year a certain number of thefe negroes, whofe labour (if I may fo exprefs myfelf) is in abeyance, from the time of heir being taken upon a writ of venditioni, to the time of their being being brought to a regular courfe of work again, at the place 10 which they are removed by their purchafer. The number of flaves fo levied on, one year with another, I compute, upon the beft grounds, four hundred ; and that their lofs of labour is equal at leaft to one month each in the year, without taking into account the time frequently fpent in their concealment, to prevent their falling into the marfhal's hands. In feven years the account will therefore ftand thus:
\(\left.\begin{array}{ll}\text { Levied } & \text { Lofs of labour; }\end{array}\right\}\)\begin{tabular}{l} 
Negroes \\
Months
\end{tabular}\(\quad 7,800\left\{\begin{array}{l}\text { Value of lofs, com- } \\
\text { puted at leaft at } \\
84,000 \% \text {. currency. }\end{array}\right.\) Of thefe Negrocs, it is not eafy to difcover how many perifh by change of place, nor the lofs on the fale fuftained by their owners; but the latter muft be confiderable; for, at an average, the Negroes, thus fold, have not yielded above \(26 \%\). to \(30 \%\). trett, which probably was not more than one third of their real worth, or what they would have been appraifed at, upon their fale with the land.

To conclude ; fince Negroes are the finews of Weft-India property, too much care cannot be taken of them; and it well becomes a Chriftian legiflature, at the fame time that it conforms its policy to what may refpect their health, and ability for labour, to foften by every reafonable means the obduracy of their fervitude, fo as to make them forget the very idea of flavery ; together with this, I acknowledge that ftrict juftice and equitable inftitutions ought to guarrantee all legal contracts entered into either by the planter, or the merchant, or other individuals: but if the rigorous exactions of payment can admit of any alleviating meafures; if lands can be made more transferable by writ of elegit, or other fcheme of extent, or bonds and fimplecontract debts be payable by other means, than hauling the Negroe labourers from one part of the country to another, tearing them from their fettlement and family, aggravating the hardfhip of their condition, and obftructing the population and culture of the ifland; it well deferves the interpofition of legiflative wifdom and humanity, to amend the law, to let juftice flow in a fmooth eafy

\section*{BOOK III. CHAP. V.}
current, or to reftrain, where it tranfgreffes its bounds. It has been the opinion of very fenfible writers, that the interelt of our colonies demands, that the Negroes fhould be better treated, and even raifed to a better condition ; this, however, muit be underfood with fome exceptions againft the imported Blacks, whofe favage manners render them incapable of thofe benefits confiftent with the fafety of the colonies, which perhaps might be granted to the natives or Creoles, to a certain limit, without any ill confequence. Some medium, it is faid, might be ftruck, between liberty, and that abfolute flavery which now. prevails; in this mediunn might be placed all Mulattos, after a certain temporary fervitude to their owner; and fuch native Blacks, as their owners, for their faithful fervices, fhould think proper to enfranchife. Thefe might have land allotted to them, or fome fort of fixed employment, from either of which they fhould be obliged to pay a certain moderate rent to the public. Whatever they acquired beyond this, to be the reward of their induftry. The neceffity of paying a rent, would keep them employed; and when once men are fet to work through neceffity, they will not ftop there; but will gradually frive for conveniencies, and fome even for fuperfluities. All this muft add to the confumption of manufactures, and the cultivation of lands; and the colonies would be ftrengthened by the addition of fo many men, who have an intereft of their own to fight for.

It becomes the gentlemen of Jamaica to fet the example, and raife their inland to the faime rank of fuperiority in the wifdom and milducfs of its laws, as it already enjoys in its extent and opulence, above the other Britifh territories in the Weft-Indies; let them boldly purfue every meafure, which will tend to multiply their people, or to ftrengthen their country againft foreign enemies; let them, in order to prevent domeftic ones, conciliate the attachment of their Negroes by protection and encouragement, rather than feek to exact au involuntary obedience by aufterity and terror. In the diffribution of our gratitude, we are bound to beftow fome thare ons thofe, whom God has ordained to labour. The juft fubordination, within the line of which our Negroes muft be kept, does by no means difpenfe with our loving, and treating them humanely. We are obliged to it, both from reafon and felf-intereft bodily ftrength,
and their adaptation to the climate, would enable them to pafs from the loweft to the higheff fations, and give the law to their mailers, if they were willing unanimounly to attempt it; but when thofe who fill the loweft rank, are ufed with equity and benevolence, fo far from becoming dreadful, by flocking together in order to trample upon us, they comply with whatever we require of them; they offer themfelves willingly to be our d.fenders, and are themfelves the inftruments made ufe of to reftrain one another within the bounds of their allotted condition. Among all the nations of antiquity, flaves were no where treated with greater humanity than at Athens, fo celebrated for the wifdom of its laws, and the refined manners of its inhabitants.

Their flaves had an action againft their owners, for acts of outrage and ill ufage; if the fact was proved, the owner was obliged to fell his flave, who while the procefs depended, might retire into an afylum appointed to fecure him from all intermediate violence \([c]\). The liberty of which the Athenians were fo jealous was not interdicted to their flaves; the latter were authorized to purchafe their freedom, in defpite of their owners, whenever they had amaffed the fum which the law had fixed for that purpofe. It was not even unufual for a patron, who was content with the fervices of his flave, to grant him his liberty for a reward; this was a fate of fervitude fo mildly regulated, that it differed but little in effentials from abfolute freedorn. Let the planters copy from this bright example, as far as prudence, and the difpofition of Negroes, can admit ; if the native flaves in our colony can with fafety be brought under an enlarged degree of protection, and fecured by rational provifions from violence and barbarity; or be permitted to redeem themfelves from perpetuity of fervitude, with the fair and honeft earnings of their private induftry; it feems highly juft, humane, and politic, to favour them; that their allegiance to the country and white inhabitants, may be more firmly engaged; after obtaining their freedom, it ftill remains by legal regulations to enforce their employing themfelves in fome honeft courfe of livelihood; they will then contribute largely not to the ftrength alone, but to
[c] This refembles the procefs under the antient Englifh writ de libertate probanda, pending which, the villein, laying claim to freedom, was protected from the vexation of the fuitor who challenged him.

Regulations for preferving Health in JAMAICA.
\[
\begin{gathered}
\text { S E C T. I. } \\
\text { Place of HABITATION and AIR. }
\end{gathered}
\]

OB SERVATION of the effects which the change from a cold to a hot climate produces on hard inanimate fubftances, fuch as wood, iron, and the like, muft naturally teach us to expect, that the human body, a fyftem of tubes and glands, or matter delicately organized, cannot pafs rapidly from the one to the other, without being affected in a proportionate degrec.

As the heated air between the Tropics acts upon metals by expanfion; fo, when it acts upoin the human body, it relaxes the folid parts, and rarefies the fluid, increafes the velocity of the blood's circulation, caufes an unufual difcharge of the bile, and a regurgitation of it into the ftomach, violent acute pains in the head, loathing of food, and ficknefs; hence feverifh diforders may enfue, which would be foon and eafily cured, if no other predifpofing caufes fupervened.

The authors, who have treated on this fubject with moft difcernment, agree pretty uniformly, in afcribing the malignancy of Weft In* dia fevers to a vitiated air, either at fea, or on fhore.

At fea, occafioned by noxious exhalations, raifed during long continued calms, when the water, not being agitated as ufual by the trade winds, is fubject to become corrupt near the furface, where it is lefs charged with falt, to preferve it from ftinking.

On fhore, by the like exhalations, excited by the heat of the fun, from foul, oozy fhores, the naufeous ftagnant water of lagoons, and the fetid mud or foil of low, fwampy grounds.

This morbid air, admitted into the lungs and circulation, may induce a difpofition to putrefcency, and render thofe diforders of the frame malignant, which otherwife, perhaps, the efforts of nature alone, or but flightly affifted, might have thrown off.

\section*{J A M A I C A.}

Such an air may therefore be confidered truly poifonous to the human conftitution; for which reafon, a firft and principal caution is, to avoid it as much as poffible; or, at leaft, to correct its baneful quality, or tendency, as much as may be, by fuitable antifeptic remedies.
As we remark, that water, whether on fhore, or in the ocean, will grow corrupt in this climate, if, for any length of time, it is not put in motion; fo the fluids in the human body will become putrefcent, if due exercife is too long neglected: hence we may conclude, that habitual indolence and inactivity are likewife to be reckoned among the predifpofing caufes of bad fevers, in a hot climate. There are practical irregularities in regard to the reft of what phyficians have called the non-naturals, which may tend either to generate or exafperate fuch fevers, and which I hall occafionally advert to. Men who commit thefe, fin with their eyes open : but from the evils of a noxious atmofphere; numbers cannot fly, by reafon of the duties of fervice, and the exigencies of bufinefs. I thall therefore give a firft attention to the injuries deriveable from this fource; and, bringing together fuch general remarks on the means of fhunning or counterating them, as gentlemen of the faculty, the moft eminent fur their fkill and knowledge in the fubject, have beneficently given to the public, apply them more particularly to this ifland. In this detail I fhall endeavour to fecond the humanity of their defign; claiming indulgence, at the fame time, for thofe fupplemental precepts and ftrictures which may be interfperfed, and meant to correfpond to the fame view.

The ingenious Doctor Lind remarks, that every country has its healthy and unhealthy fituations; and he inflances, in refpect to the furmer clafs, the inland of Portfea, near Portmouth, and the town of Brading, in the ifle of Wight; he might have added the marfhes of Kent, Effex, Lincolnthire, and Cambridgefhire, and perhaps fome other fpots in England. In the Weft Indies fuch low fwampy fposs are ftill more fatal; and they are infefted with mufkeetos, which feem as if placed there by the hand of Providence, to affault with their ftings, and drive away, every human being, who may ignorantly venture to fix his abode among them. It is moft dangerous to pafs the night in fuch places, and it is at fuch time that thefe infects collect in fwarms, and make war on every daring intruder. In fome parts of the

\section*{BOOK III. CHAP. VI.}

South American continent the torments they infli\&ed were fo intolerable, that many houfes, and even whole villages, were obliged to be deferted by the Spaniards and Indians; of which Ulloa gives an account, who, in his paffage from Guayaquil to Caracol, fuffered inexpreffibly from the multitudes which infefted the marfhy banks of the river of Guayaquil, infomuch that their ftings penetrated through all his cloathing, and would not permit him to take one moment's repofe, Such places in Jamaica are to be deemed unfit for refidence; but, in fo extenfive an inland, we meet with few of them in proportion, nor does it abound with fituations that can be juftly ftigmatized for a natural infalubrity.

There are various reafons to be affigned, why the inhabitants of this ifland were formerly afflicted with frequent vifitations of epidemic ficknefs. When Europeans reforted hither in great numbers, they were crowded into two towns, and inconveniently accommodated. A buccaneering intercourfe fubfifted with the baleful coafts about Carthagena and Porto Bello. In 1671, when the fleet commanded by Sir Henry Morgan returned from that coaft, his crews brought with them the malignant fever of Porto Bello, and the greater part of them died of it; the contagion fpread to thofe on fhore, where it produced a terrible mortality. In 1741, a very great ficknefs prevailed here from a fimilar diforder, imported by the troops, on their return from the Carthagena expedition; and the like had happened before in 1704 , when admiral Neville's fquadron was on this ftation. The houfes were inconveniently built, the difeafes of the Weft Indies were very little underftood, and fuch contagious diftempers were often fatal, for want of thofe remedies which were afterwards invented. Many lives muft have been loft, by thefe putrid fevers, before the Jefuits bark was brought into general ufe, or copious bleeding exploded; hundreds perifhed by the ravages of the fmall pox, before the art of inoculation grew into practice ; multitudes have been formerly ftifled to death in this climate, by confinement in clofe hot rooms, under loads of bed-cloaths, and poifoned with their own atmofphere, while the frefk air, which was their beft remedy, was mof induftrioufly excluded. Nor is Jamaica fingular in having fuffered great depopulations by peftilential maladies, imported into it from other parts. In 169 I , the ifland of Barbadoes was invaded with a contagion, brought by an Englifh
fleet, which continued to rage there more or lefs for twelve years, and fivept off above a third part of the white inhabitants. In the year 1740 , the South Sea galleons, having touched at Guayaquil, in order to fecure their treafure, on account of the war between Spain and Great Britain, brought with them a putrid malignant fever, which had never been known at that place before, and numbers died of it: it is needlefs to multiply examples of what muft have happened to every country carrying on any confiderable trade; this caufe is very diftinct from local maladies, excited and nourifhed by fomething pernicious to human health, in the foil or atmofphere. In regard to the latter, a foreigner, fays Lind, who fixes his abode on a fickly fpot in England, as for inftance at Hilfea Barracks, muft not call the climate of England unhealthy, becaufe be fuffers from the difadvantages of a bad fituation; fo, to apply this remark to Jamaica, an European, who fixes his refidence at Greenwich near Kingfon, or in the near neighbourhood of a lagoon, ought not to reckon the climate of this illand unhealthy, becaufe he has fuffered by an injudicious choice. The fact really is, as before has been fated, that heaithy as well as unhealthy fituations are to be found in all countries; but that the Englifh, for the convenience chiefly of their trade, and fometimes through ignorance, have generally fixed on the mon unwholefome fpots, for the fituation of their towns in the Weft Indies. The healthy air of Bartadoes is owing to that illand's being entirely cleared of wood; but the principal town there is fixed on a fivamp, and therefore perhap; incurably unhealthy. Buffe-Terre in St. Kitts, St. John's in Antigua, are not lefs fo, and, as I am informed, from the like reafon \(\lfloor a]\).

The

\begin{abstract}
\([a]\) In the year 1766 , fixteen French Proteftant familiies, confinting of \(\overline{j x} t y\) perfons, were fent, at the expence of government, to Wef Fiorida; the ground allotted for their refidence was on the filc of a hill, furrounded svith mathlos, at the mouth of the river Scanbia. Thefe new fetters arrived in winter, and continued healthy till the fickly months, which in that country are thofe of \(\mathcal{F}_{u}\) ly and Auguft; during there two months the annual lever of that climate proved fo fatal to them, that, of the fixty, only fouricen furvived; and even this fimall remnant were all in a bad flate of health in September, and moft of them died in a few months afterwards. Such cataiftophes are fhocking ; efpecially when we confider, that if thefe induftrious people had been fixed on a healchy fpot, not incommoded with the malignant vapours of a fwampy foil, they might have lived many years, and covered a large diftrict with their offspring. Filmz gives another inftance of fuch fatal fituations, in the little town of Salem, in Penfylvania, adjacent to which are fome very low fwampy meadows. They who come hither from other parts acquire a very pale fickly lock, although they
\end{abstract}

\section*{BOOK III. CHAP. VI.}

The gencral proofs of an unhealthy fituation, in this climate, are, Firf, Sudden alterations in the evening air, from ftifling heat, to a chilling cold; this is perceived foon after funfet, and is accompanied with a very heavy dew, which indicates a fwampy unwholefome foil.

Secondly, Thick noifome fogs, arifing after funfet, from mud, flime, and other impurities, having fomething of the fcent of anewcleanfed ditch.

Thirdly, Innumerable fwarms of large mufkeetos, flies, and other infects, which attend putrid air and low unventilated places, where they delight to breed.

Fourthly, Where butchers meat is foon corrupted, and in a few hours becomes tainted and full of maggots; and where wounds, nearly brought to heal, fuddenly break out afrefh, attended with great putrefaction of the parts.

Fifthly, Where a dead corpfe becomes intolerably offenfive in lefs than fix hours.

Sizthly, Where, by the fubfidence of the water in dry weather, the channel of any river is left bare to the fun, and emits a difagreeble fmell, by night as well as by day, from putrid flime, dead fifh and infects, and other corrupted fubftances.

In fummer nights, the body is moft liable to fevers, becaufe of the alterations of the air; for, in the beginning of the night, it is fultry; in the middle, more temperate; and, towards the morning, cool : by which, the accuftomed flow of perfiration is checked in time of fleep, by throwing off the cloaths. This is confirmed by all who travel in hot climates; fudden cold, after warmth, makes a change in the habit, by repelling the tranfpiring fteams, which were copioufly rifing; in thefe climates, therefore, it may be neceffary to cover the body, when the nocturnal dews happen, lelt the pores fhould be too fuddenly clofed, which might produce fevers of the worft kind.

The dew, which is moft unwholefome and dangerous, is that which rifes imperceptibly from the earth after funfet. This may eafily be enjoy ever fo perfect heaith, and lively colour, at their firf arrival. In the month of May a molt difagreeable french annoys it from the fwamps; the putid vapours are wafted upon the inhabitants, and are inhaled into their bodies torether with the air which they breathe. At the end of every fummer they are furc to be afflicted with intermittent fevers. A young couple, who came paffengers with Kalm, went, foon after their arrival at Philadelphia, in perfect health to Salem; but in a few weeks they both fell fick, and died before the winter was half over. A hot atmofphere, fo impregnated with putrid particles and watery vapours, cannot fais of producing diarrhceas, dyfenteries, and various hinds of putrid and malignant fevers.
collected, by inverting a bowl, or glafs tumbler, and plaring it on a flick, with the mouth about half an inch from the furface of the ground. After fixing it thus at funfet, if it be examined about midnight, it will be found entirely covered within with watry globules, like the cover of a boiling kettle, while the outfide perbaps i barely moiit. But if fuffered to remain the whole night in this pofition, the condenied vapour of the earth precipitating towards morning, in the cool hours before fun-rife, will cover the outfide alfo with the like app arance.

I have frequently obferved, that, in Kingfon, there is fometimes no dew at all perceptible in the morning; at other times, after heavy fhowers in the Liguanea mountains, and a brifk land wind, it has been very copious. In the former cafe, which happened in dry weather, there either was no reek or perfpiration from the earth of the ftreets, or the atmofphere above continued in too warm a fate during the night to condenfe any vapours which might afcend. In general, Ithink it may be concluded, that it is not wholefome to be much abroad in this climate after dark, at leaft without due precaution of putting on additional cloathing.
The beft prefervative againft the mifchievous impreffions of a putrid fog, a fwampy or marfhy exhalation, is a clofe, fheltered, and covered place, fuch as the lower apartments in a thip, or a houfe which has no doors nor windows facing the fwamp. If, in fuch place, a fire be kept either at the doors or other inlets, as is practifed in fome unhealthy countries during their rainy or noifome foggy feafon, thefe fires, together with the fmoak, prove an excellent fafeguard to thofe within, againft the injuries of a vitiated atmofphere.

The cuftom of the Negroes in this refpect, perhaps, may conduce as much as any thing to their enjoying health in fuch marfhy foils, when white perfons are affected by the malignant effluvia, and contract fickneff; few of their huts have any other floor than the bare earth, which might poffibly tranfmit noxious exbalations in the night, if they did not keep up a conftant fire in the center of their principal room or hall; the fmoak of which, though intended to difperfe the murkeetos, has another good effect, the correcting the night air, and difarming it of its damp and chill, which might be prejudicial to their healths \([b]\).

\footnotetext{
[b] Doctor Traphanz \{peaks to the fame effect: "Though water is a moft neceflary conveni" ency, and its plenty and goodnefs a great accommodation to thefe fettlements; yet, as the air - itfelf is very moitt, we ought to covet as dry a living as may be, and therefore not to lodge " ourfelves
}

\section*{BOOK III. CHAP. VI.}

In fuch low foots, even in this climate, the chill and denfity of the air is fuch, as to render the breath vifible early in the morning, a circumftance which is not obferved in other parts of the lowlands.

Unwholefome fogs in Jamaica are, fuch as emanate from lagoons and marfhy foils; but they are not common. The fozs of Sixteen-mile-malk, and fome other places among the mountains, are not unhealthy, nor have they any ill fmell. Thofe who inhabit places where falt or unwholefome marfhes are formed by frequent inundations of the fea, or where the fhores are lined with flinking ooze or mud, and aquatic plants of a noxious quality, ought, during the fickly feafons, to retire into the country at fome diftance. The fafeft retreats are to be found on the fides of hills or mountains, where there are no moraffes within three miles; preferring alfo thofe fituations which are not affected by vapours fpringing from the circumjacent valleys, at leaft in their perpendicular afcent. Experience confirms the fact, that in fuch elevated fituations, where the foil is dry, and clear from wood and ftagnant water, Europeans enjoy good health, in the very hotteft climates, during all feafons of the year: but, if perfons will obftinately run the hazard of their life and health, by remaining all night, or fleeping in unhealthy places, they cannot expect to reap the benefit of fafety and fecurity from a healthy air in their neighbourhood.

In every ifland, perhaps, fuch afylums may be found, where the air proves healthy, and reftorative to European conftitutions.

The ifland of Dominica is in moft places woody and unhealthy; yet there were feveral French families in it, who, by fixing their refidence on the fides of hills, lived exempted from the attack of agues and fevers, the difeafes common there; and thus enjoyed as good a fate of healsh and conftitution, as if they had been in France. The beft fituation for a change is, where the heat of the day feldom excecds 70 on Fahrenheit's thermometer, and where the cold of the night is not more than 16 degrees lower on the fame fale,

\footnotetext{
"ourfelves or fervants receptive of additional water from ponds or rivers; for I have obferved "s. it matter of fact, where fuch care hath been omitted, more lives than elfewhere have beens
"flooded into Styx. Befides its great prefervation in this refpect, a dry lodging, removed at leaft
"ore fory from the ground, is approved the beit. fecurity of our white fervants; as for. the Negroes,
"c. though their lodging be near the ground, they force of the moifture of the earth by their con-
". ftint fires, and thereby become healthy," P, 27.
}

\section*{J A M A I C A.}
or at 54 ; where the ground is cleared from wood and bufhes; has no ftagnating water upon or near its furface; where the foil is fertile, and favours the cultivation of European plants, and the health of European animals; and, laftly, where fheep, brought from England or North America, fill retain, without inconvenience, a fleecy covering. There are fpots of ground, in all the mountains and hills adjacent to the towns in Jamaica, which, by induftry and cultivation, might be converted into the moft healthy and delightful rural retirements. In fuch places, on thofe eminences where at prefent the chillnefs of the evening renders a fire comfortable, and requifite to an European conflitution, the improvement of the foil would gradually mend the quality of the air. Gentlemen, who can afford to keep a horfe or carriage, after doing bufinefs in Kingfon, or other maritime towns, might, before funfet, return to fuch a healthy and pleafant country feat as is here recominended, taking the precaution of never fleeping elfewhere during a fickly feafon. Thofe, whofe circumffances and bufinefs will permit, fhould retire, efpecially in the night-feafon, to fuch places for health, until they grow inured to the climate ; and others, who cannot afford this precaution, or whofe affairs will not admit of it, fhould be immediately removed thither when taken ill. Should the change of air not produce an inflantaneous recovery, it will at leaft mitigate the fymptoms of the diforder; and, the ufe of medicines being attended with more efficacy, a patient will more fpeedily regain a vigorous ftate of health. When a perfon is feized with a fever, proceeding from the bad air of any place, his illnefs, whilft he continues there, is daily, nay hourly, aggravated, and reinforced, by a conftant application of the morbid caufe. In this fituation, the beft medicines, even the bark, have been ineffectual in relieving the patient, whilf thus inceffantly expofed to the fources of his difeafe. They who labour under fevers, fluxes, and other difeafes of the like violent wature, may be removed with the greateft fafety for change of air. Such, therefore, as are taken ill during the rage of any epidemic ficknefs, fhould be carried immediately into a purer air, to fome diftance beyond the reach of infection; and frequently, in thefe cafes, this is a certain and immediate cure of itfelf: fo in 1765 , when a mortal ficknefs raged on thore at Penfacola, the crews of
the men of war, lying at a mile's diftance from the town, enjoyed the moft perfect health; and fuch patients, who, after their being feized with the fever on thore, were carried on board fhip, prefently recovered; the diforder, by change of air, foon loft its alarming fymptoms, and was eafily fubdued; nothing is more certain, than that the fea air, and fea breezes, in this part of the world, are fpecifics for the removal of malignant diforders contracted from a vitiated atmofphere on the land. I fhall now apply thefe remarks more particularly to Jamaica. The fituation of Spanifh Town is healthy ; it has no marlhes about or near it; and the rain water that falls upon it is drained into the river by a pretty rapid defcent. Nothing more is needful to preferve this natural falubrity of its air, than a well-regulated police, under the controul of the magiftrates, who fhould provide, that the ftreets and environs be kept clear from filth, and all putrid fubftances, which might breed annoyance. The air of all the Tropical countries is moft impure, immediately before and after the periodical feafons; and, at fuch times, the greater caution muft be ufed to avoid catching colds, which may produce intermittent, or fometimes remittent, fevers. At fuch times, or when any epidemic diftemper of a contagious nature is by accident brought into the town, the adjacent hills afford a convenient and fecure retreat. The town of Port Royal, being almoft furrounded with the fea water, is juftly commended for the falubrity of its air, a certain proof of which is the longevity of its conftant inhabitants.

The town of Kingfton, lying on a gravely flope, and open to the fea breeze, would probably be a healthy place, if it was not expofed to infectious diforders, brought into it from the fhipping ; yet, when any fuch malady begins to rage, the fick might always find a falutary retreat among the Liguanea Hills. I have already fpoken of the barrack at Stoney Ridge, in St. Andrew's; the neighbourhood of this place would doubtlefs be very well adapted for a retreat from contagion, or for the recovery of convalefcents; nor might it be a lofing project perhaps for a builder to purchafe land here, and erect a certain number of commodious houfes, to be lett for this purpofe. Society might allure thofe to try the experiment, who would otherwife be averfe to it, from a diflike to folitude; and, indeed, nothing more alleviates the diftrefs and dejection incident to

\footnotetext{
Vol. II.
}

Uuu
fevers

\section*{514}

\section*{J A M A I C A.}
fevers of the putrid clafs, than chearful company. The fituation of the other towns is but indifferent; but the inhabitants of all have their places of retreat, if they could but refolve to make ufe of them. For Old Harbour there are the Goat Iflands, and the Hills of St. Dorothy. Savanuah la Mar is at no great diftance from hills and rifing grounds; Lucea and Montego Bay are furrounded with high lands; at the latter place, in particular, the flat fpace for building is fo circumfribed, that, as the town enlarges, the houfes muft be built on higher ground, along the fides of the contiguous hill; which circumftance will one day contribute to render it populous and flourifhing. The lower part of Kingfton, next the harbour, having been founded upon foil recovered from the water, is too much pent up with the fhipping that lie near the wharfs, and with warehoufes and goods, to be eligible for paffing the night. Befides, the mud near this quarter, whenever it is difturbed, either by the violence of the furge in high breezes, or by the oars, poles, or boathooks of navigators, is apt to emit a very putrid and unwholefome ftench; fuch fituations may either generate bad fevers, or exafperate the fymptoms of thofe diforders which otherwife might eafily be conquered.
Throughout this inand, wherever we turn our eyes, it appears fo crowded with hills and rifing grounds, ventilated always with a free and falubrious air, that we cannot but condemn thofe perfons, who chufe low, damp, and fultry hollows, for their conftant refidence; and who often fuffer from the ill effects caufed by fuch fituations, without difcerning the real fource of their bad health : but in time, perhaps, when the importance of this matter comes to be more ferioufly attended to, the planters will allow more weight to thofe particulars in the oeconomy of health; which reafon and experience combine to recommend.
Thofe whom fortune has bleft with abundance, fhould be fudious to preferve the lives of their dependents, whofe paverty perhaps is their greateft crime. The cruelty of expofing the lives of men to Gicknefs or death, by reftriating them to dwell in wretched hovels, and on unhealthy fpots, needs only to be pointed out, inorder to be selieved. The natural generofity, and benevolent difpofition, of the planters will immediately lead them to adminifter the certain remedy,
although it may be attended at firft with fome extraordinary expence to them. The habitations of their white fervants thould bo fixed on iiry, dry, and elevated, fpots, raifed fome feet above the furface of the earth, floored, and conftructed either of timber and plaifter, or brick, but never (if poffible to avoid it) of ftone; which is a very improper material in this climate for dwelling-houfes, on account of the damp and chill which it ftrikes in rainy weather ; but, whenever it is unavoidably ufed for fuch buildings, the effects may be rendered lefs pernicious, by furrounding them with a fhed or piazza, or lining the walls with boards, or lath and plaifter, fet off to fuch a diftance as to let the air circulate between.

The like precautions muft be ufed in the eftablifhment of white families, if the firit Chould ever revive of introducing and fettling them in the ifland. The place allotted for their habitation Chould be ftony, gravely, or at leaft dry, open to the wind, and remote from the annoyance of vapourifh fwamps, or ftagnant waters.

It may happen, that many perfons, from the urgent nature of their employment and circumftances, may be obliged to remain in unhealthy fituations; in this cafe they muft ufe the beft means in their power to guard themfelves from the local mifchiefs to which they may be occafionally expofed. Such perfons thould fleep in the higheft apartments of their houfe, whofe doors and windows ought to be fo contrived as not to front or open towards a damp foil or marh. At thofe feafons of the year when fwampy exhalations are moft to be dreaded, as after heavy rains, and great heats fucceeding, fires made in the evening, and early in the morning, with lignum vitæ, cafcarilla, candlewood, and other refinous woods, or fubftances, would be very ferviceable. A Guiney merchant of Kingfton, whofe Negroes were feized with the fmall-pox, then raging malignantly in the town, put them all into a warehoufe, in which was lodged a confiderable quantity of pimento, for exportation, whofe odour was fo powerful as to fubdue the offenfive ftench of the diforder, and refrefhed the patients fo much, that they all got through it fafely. But of all antifeptic vapours, none is fo powerful as the acid fteam of burning brimfone, for correcting putrid air, and checking contagion.

In many parts among the mountains I have known houfes upor elevated fpots not unhealthy, though furrounded with wonds. The
greater coolnefs of the air, in fuch places, and their diftance from any fragnant water, or fetid ooze, may contribute to their falubrity; the clearing away fuch woods, which fcreen the lower fituations, and increafe their fultrinefs, by excluding the free air from them, will render them more habitable, but perhaps not add much to the healthinefs of the former; for the reafon why the mountain woods are lefs injurious than the clofe thickets of the low lands, is, that the trees fand further afunder, fo as to give a freer paffage to the winds and vapours; and confift, for the moft part, of the aromatic kinds, which ferve to correct any noxious exhalations, with their fragrancy and perfume. Their leaves in general are thick and firm; their pores extremely minute, and filled with a refinous or glutinous juice; by which means they perfpire lefs, and are enveloped with a lefs baneful atmofphere, than the trees of moift and low grounds. Pimento walks are remarkably healthful for refidence. Perfons, obliged to refide upon or near marhy, unhealthful fpots, fhould avoid expofing themfelves, when farting, to the chills of the morning and evening air, and never go abroad with an empty ftomach; but, previous to their labour, or amufement abroad, they fhould take either a glafs of wine, with a flice of bread, or drink a fmall quantity of chamomile or bark tea, or of an infufion of garlic, bark, and rhubarb in brandy; which may be taken either alone, or diluted a little with fome water, before they venture out in the morning.

In all fuch humid fituations fmoaking tobacco is beneficial; as alfo a more plentiful diet of flefh, with wine, and the peppers of the country. The pit of the ftomach, the feet, and the back bone, are more particularly to be guarded by coverings of flannel or cotton; a fquare piece of thick dimitty, with a tape ftrap to put round the neck, may be worn next the fkin, to cover the cheft and fomach. This has been experienced very conducive to health, in fuch places, and a good preventative againft thofe colds and rheumatifms, which are apt, in thefe climates, to fall on the bowels, and caufe the belly-ach; and, to thefe precautions the daily ufe of bathing may be added, in the forenoon, when the fomach is empty. Strangers newly arrived at fuch places, or thofe who are conffitutionally fubject to agues, fhould, during the fickly feafons, take, every other night, two or three fpoonfuls of tinctura facra, or a few grains of pilula mifin not fufficient to

\section*{BOOK II. CHAP. VI.}
purge, but only to keep the body gently open; and, for further prevention, a wine glafs of the [ \(c\) ] infufion of bark and orange-peel, in water; or a table fpoonful of a ftrong [d] tincture of bark, in firits, may be taken, diluted with water, occafionally, in a morning before breakfaft. When a perfon is attacked with a fit of fhivering, or the chills of an ague, he ought to go to bed; and, mixing about two ounces of white-rvine vinegar with a quarter of an ounce of finely powdered chalk, thould drink them immediately, while in the ftate of effervefcence. This draught generally fhortens the cold fit, brings on a profufe fweat, and may be repeated in the fubfequent parox\(y\) fims. A mixture of falt of wormwood with lime or lemon juice, taken in its effervefcent flate, is adminiftered for the fame intention; but the beft cure for an ague is the preparation fubjoined in the note [e], which has rarely been found to fail in carrying it off.

For perfons on the recovery from thefe and other debilitating maladies in the Weft Indies, no food whatever contributes more or fooner to the reftoration of ftrength, than a turtle, or fifh-diet, or nourifhing fifh-foup, warmed with the fices of the country; and, if neceffary, rendered more palatable by the addition of a little juice of ripe limes.

It has been a received opinion, that, upon change of air from a cold to a hot climate, the firft fever or fit of ficknefs alters the conftitution of the body, fo as to feafon it in the change; and that fuch a ficknefs is abfolutely neceffary to feafon and accommodate an European to it. But this is fallacious.

Sicknefs, though often primarily caufed by the alteration of climate, does not always adapt the body, nor feafon it ; nor is it abfolutely neceffary for that purpofe. For many perfons, either from fome confitutional ailment, fome latent predifpofing fource in their habit, as a fcorbutic taint, may fuffer reiterated fits of illnefs, without percciving themfelves better reconciled to the change, than they were after
[c] Fi. One ounce of bruifed bark, half an ounce of four orange peel, half a pint of boiling water; infure thefe ingredients, and, after fuffering them to fettle for fome time, pour off the liguor fo long as it runs clear.
\([d]\) R. One ounce of pounded or bruifed bark, eight ounces of French fpinit of wine; let it fand in a warm phace four days, then ftrain off, and bottle it for ufe; it may prove more etficacious with a fight addition of rhubarb; or, in hot temperaments, a very little nitre. Linle.
[ \(]\) P:. Three drachms of bark, finely powdered, one drachm and half of Vonice treacle, the juice of one and half commoneized lemons, and fix table ipoonfuls of found red Purt wine ; mix the ingredients well, and divide into three equal parts ; one whereoi to be taken at morning, noon, and evening, of the well day, on an empty ftomach. This dofe is for a grown perfon, and may be proportionably leffened for thoie of tender years.
the firft attack; many others fuffer no illnefs at all from the change, but bear it well; which proves, that ficknefs or a fever was not required to prepare or adapt them to it. The thorough and proper feafoning to fuch a climate is brought about effectually by remaining in it for fome length of time; and all fudden changes from cold to heat, or heat to cold, produce nearly fimilar effects. Thus, if 500 feamen or foldiers pafs from England to the Weft Indies, fetting out in very cold weather, and arriving there after a quick voyage, many of them will be feized with a diarrhoea, and with violent and mortal fevers, if they indulge, foon after their arrival, in rum newoly diftilled. But, if the fame men are kept at fea, and the flip does not put into any unhealthy port, during the fickly feafon of the year, theie men, after being twelve months in the Wen Indies, will become perfeatly feafoned to the climate, and enjoy as good a ftate of health, as if they were in England.
So, if the fame men, after being fome years in the Weft Indies, are relieved, and arrive on the Englifh coaft, in the winter time, they will be again feized with diarrhceas; the cure and removal of which will intirely depend on keeping the patients warm. On their change to the hot climate, the humours, unable to pafs off faft enough by the outlets of perfiriation, fall on the bowels. On their return from a hot to a cold climate, the outlets by perfpiration being fuddenly clofed, the humours are repelled, and driven again upon the fame parts; and the keeping the patients warm is no more than recalling their bodies to the fame glow to which they had lately been accuftomed, and thereby promoting a free difcharge by the fkin.

It has been obferved, that mufkeetos are intolerably numerous in thofe places in the Weft-Indies, which are leaft adapted to human habitation. They are found in the greateft fwarms among lagoons, and fwamps on the fea coaft, and in little creeks fheltered with mangrove trees; in gullies which contain any ftagnant water; in puddles on the flat country after the rainy feafons, and in rivercourfes in dry weather, where the water refts in detached hollows, and becomes corrupted from the fermentation of aquatic weeds, and fubfided fcum. Sometimes, I have known them driven from their fkulking holes, by the violence of firong fea breezes, to a confiderable diftance up the country; but in general among the moun-

\section*{BOOK III. CHAP. VI.}
tains, they are fcarce, very diminutive and feeble. They are principally troublefome, and in fwarms, after the periodical rains, when the lowlands are drenched with water, and full of little puddles, where thefe infects depofite their eggs, and multiply the breed.

They are therefore no pofitive harbingers of unhealthy fpots, except where they are found at all Jeafons of the year, in the greateff abundance; fuch are the places, where they can enjoy a warm atmofphere, and water undifturbed by rude winds. They are found in the moft healthy fituations; they fwarm in all the provinces of North America, and even in Canada in the fummer time ; but it is very certain, that in thofe countries, as well as the Weft-Indies, they are moft numerous in the leaft healthful parts; and that the fummer feafon is the moft fickly time of the year in North America. Thefe infects cannot exift long, nor propagate their fpecies well, without ftagnant water. Dry weather, dry expofures, and a cool air, are equally obnoxious to them; their favourite haunts therefore, and fuch as feem moft to promote their multiplication, are to be rejected as the leaft fit (in proportion) for mankind to inhabit, at leaft during thofe months in the year when they appear moft vigorous and numerous.

Butchers meat does not ordinarily grow tainted, in the lowlands of Jamaica, under 30 to 36 hours (unlefs expofed to the fun). When hung up in an airy fhaded place, and protected from flies, it will keep longer. In the mountains, I have eat beef corned and boiled, very good and fiweet, after five or fix days keeping; and pork pickled here of a twelvemonth old. Corpfes are kept, on the South fide of the ifland, in general, twenty-four hours or more, according to the nature of the difeafe, and feafon of the year, before interment, without becoming offeñive.

The effects obferved here on metals expofed to the air, is no criterion of an unhealthy ftate. This rufting, or corrofion, particularly remarked on iron or feel, is thought to be occafioned by a muriatic acid, or by nitrous particles, with which the air of this inand is impregnated. I have feen iron work upon one of the higheft ridges of the mountains, in as healthy a fituation as any on the globe, corroded in as great a degree as in any part of the lowlands. I obferved, on a large iron fcale beam fufpended clofe by the
fea,

520

\section*{J A M A I C A.}
fea, that the fide next the water was cankered with ruft in the courfe of a few weeks after being hung up; but the oppofite fide remained perfectly found, and the paint as frefh as at firft.

Tranfient fhowers here, though fometimes very heavy, do not leave the air affected with moifture ; and thefe metals ruft leaft here during rainy weather.
May not fuch irrigations dilute, conduct, or carry off, thofe particles floating in the atmofphere, which at other times act as menfrua upon iron? or, may they not render them lefs active?
Fixible or mephitic air acts very powerfully upon iron but has not any effect upon copper. But copper is corroded in this climate, though not fo violenly as iron. The volatile vitriolic acid diffolves both; this latter fubftance has been conjectured to be plentifully diftributed throughout the univerfe, in the fubterraneous regions, and even in the atmofphere ; it is conftantly prefent in the electrical fluid which is diffufed in fuch great abundance between the Tropics; and from the fuppofed exiftence of it in the air, it has been called, the fal acidum vagum univerfale \([f]\). We may therefore venture, perhaps, to afrcibe the effect obferved to this caufe, until fome more probable, or powerful, agent fhall be difcovered.
Having now laid down general rules for diftinguifhing a good from a fickly fituation I proceed to another effential article, which merits attention from all Europeans, coming to refide in this climate, viz.

\section*{S E C T. II. \\ CLOATHING.}

Fafhion and cuftom, fays Dr. Hilary, are two prevailing things, which enflave the greater part of mankind, though often in oppofition both to reafon and convenience, and particularly in our drefs; for no doubt but the loofe, cool, eafy drefs of the Eaftern nations, their gown or banyan, is much eafier and better fitted for ufe in a hot climate, than the Englifh drefs, which is clofe and tight. All who have tried both, find it fo: but, fuch is the influence of farhion and cuftom, that one may fee men loaded, and half melting under a ponderous coat and waiftcoat, richly bedaubed with gold lace or
embroidery on a hot day, fcarcely able to bear them, and little confidering how much they injure their conftitutions by a fweltering load of garments, of whofe inconvenience they cannot but be fenfible; and under whofe preffure, they cannot but feel the moft uneafy fenfations.

A banyan is the drefs of the mandarins at the courts of China and Japan, of the nobility and gentry at Indoftan and Perfia; and why it fhould not be adopted in other hot countries, can only be attributed to the tyranny of cuttom, which is ever perverfe, and whofe councils refemble the laws of the Medes and Perians, which altered not. If a Chinefe mandarin was to be crammed into a fuit of Englifh cloaths, he would look like a hog in armour, and feel as much diftrefs. But wrap an Englifhman, under the torrid zone, in a Chinefe banyan, and he would efteem it luxurioufly delightful; cuftom arbitrarily forbids him to enjoy fo much blifs, and commands him to drefs in the modes of London and Edinbugh. It is not however unwife to borrow fo much from the fathions of other nations, as we may practife ourfelves with equal advantage. To come nearer therefore to Jamaica, let us obferve a little the management of our Spanifh neighbours. All their cloaths are light; their waiftooat and breeches are of Bretagne linen, and their coat of fome other thin ftuff. Wigs are not much worn among them; only the governor and chief officers appearing in them, and that moftly on public occafions. Neckcloths are likewife very uncommon; inftead of thefe, the neck of their fhirt is adorned with large gold buttons, or clafps, and thefe are fuffered to hang loofe. On the head, they wear a cap of very fine, thin, and white linen. Others go entirely bare headed, having their hair cut from the nape of the neck upwards. Fans are very commonly worn by the men, made of a thin branch of the palmeto, in the form of a crefcent, with a ftick of the fame wood in the middle for a handle. Their zeomen wear a kind of a petticoat, which they call a pollera, made of thin filk, without any liniug; and on their body a very thin white jacket; but this is only put on, in what they call their winter, during the rainy feafon; for, in the hot months, they think it infupportable. Although this attire is fo fimple and loofe, yet it is decent; for they
\[
\text { Vo L. II. } \mathrm{X} \times \times \times \quad \text { always }
\]

\section*{J A M A I C A.}
always lace in fuch a manner as to conceal their breafts. When they go abroad they wear a mantlet or fhort cloak. The richnefs of their drefs does not confint, as with the Englifh ladies, in a multitude of things piled one upon another; but in the fimeft linen, laces, and jewels, fo difpofed as to add very little to incovenience, and to produce the moft ormamental effect.

On the head, they wear a cap of fine linen covered with lace, and worked into the flape of a mitre; which, being plentifully ftarched, terminates forward in a point, not eafily difcompofed. This they call panito, and it is wom by the ladies, and other native Whites, as an undrefs; nothing can be more becoming, and, having ufed themfelves to it from their infancy, it fits upon them with a better air. Our Englifh belles in Jamaica differ very widely from thefe madonas. They do not feruple to wear the thickeft winter filks and fattins; and are fometimes ready to fink under the weight of rich gold or filver brocades. Their head-drefs varies with the ton at home; the winter fafhions of London arrive here at the fetting in of hot weather; and thick or thin caps, large as an umbrella, or as diminutive as a half crown piece, are indifcriminately put on, without the fmalleft regard to the difference of climate; nay, the late prepofterous mode of dreffing female hair in London, half a yard perpendicular height, faftened with fome fcore of heavy iron pins, on a bundle of wool large enough to ftuff a chair bottom, together with pounds of powder and pomatum, did rot efcape their ready imitation; but grew into vogue with great rapidity, and literally might be affirmed, to turn all their beads; for it was morally impoffible to avoid ftooping, and tottering, under fo enormous a mafs. Nothing furely can be more prepofterous, and abfurd, than for perfons refiding in the Weft-Indies, to adhe:e rigidly to all the European cuftoms and manners; which, though perhaps not inconvenient in a cold Northernair, are certainly improper, ridiculous, and detrimental; in a hot climate. How perverfe is an attachment to thick bufhy periwigs (the fit antidotes to frof and fnow), under a vertical fun; or complete fuits of thick broadcloth, laced from top to bottom, in a country where there is not the leaft occafon to force a fweat! The proper conts for this climate are of the lighteft Englinh broadcloths, commonly known
by the name of kerfeymeres, made without any lining or lace, eary and loofe. The waiftcoat and breeches fhould be of cotton (corded or India dimity for example), in preference to linen, as it prevents catching cold; a circumftance not well to be avoided in a linen drefs, which is no fooner moift, than it ftrikes a very fenfible chill, fo as frequently to obffruct perfpiration. The fame fubftance is alfo proper for ftockings. Moft men however, in this ifland, wear linen drawers in preference to linings, for the fake of cleanlinefs; and prefer the Ruffia drab for breeches, as it is very durable, and has a neat look.
White hats are beft adapted to this climate, on account of their being light and cool. The black hats abforb the fun's rays, and are fometimes extremely inconvenient. All white fervants therefore, foldiers, and others, whofe employments may neceffarily oblige them to be often expofed to the fun in the heat of the day, fhould be furnifhed with white hats inftead of black; the former repelling, the latter imbibing, the heat [ \(f\) ]; and experience convinces, that light-coloured cloathing is by far the cooleft in this part of the world, and black or dark-coloured the hotteft ; for the fame reafon a full mourning, or black fuit, is improper here; becaufe, in fuch cloaths, the body is more heated by the fun in walking abroad, and heated at the fame time by the exercife; which accumulated fervour may occafion dangerous illnefles. They are prudent, who, inftead of this, wear a fcarlet, with black cuffs and button holes, by way of mourning; for nothing is more likely to fubject a perfon to catch cold, and a fit of ficknefs, than a fudden change from an habitual light and cool drefs, to one twice as hot; and as fudden a return again, after a time, to his former mode. On the fame principle, the ladies hats or bonnets fhould be lined with black, as not reverberating on their faces thofe rays of the fun, which are reflected upwards from the earth and water, and occafion freckles, or tan. And hence alfo it appears, that putting a bit of white paper within

\footnotetext{
[ \(f\) ] This is illuftrated by Dr. Franklin's experiment, who took a number of little fquare pieces of broadcloth of various colours, and laid them all out upon the fnow, in a bright fin-finy morning. In a few hours, the black cloth, being moft warmed by the fun, funk fo deep as to be below the action of the folar rays. The dark blue, almoft as deep. The lighter blue not quite fo much as the dark. The other colours fill lefs, in proportion as they were lighter; and the white remained on the furface of the fnow, not having funk at all.
}
the crown of a black hat will not keep out the heat, though it would, if placed without \([g\) ?

Travelers in this climate flould be careful always to change their cloaths after getting wet by riding in the rain. It is a common practice here, as in the Eaft-Indies, to cool bottled liquors by wrapping cloths dripping-wet round the bottles, the warmtl which the liquors had contracted evaporating with the water as it paffes from the cloths; and the operation is greatly facilitated by fetting them in a fhaded place, where they are acceffible to the wind [ \(b]\). A traveler, caught in rain, is much in the fame fituation as one of thefe bottles, and, by the quick evaporation of his natural warmth, perceives his body chilled and aguifh. It is ufual here to ftrip, and rub all over with rum, and then put on dry cloaths; which prevents any ill confequence.
Having nothing more material to add on the fubject of drefs, I fhall next fpeak of,

\section*{S E C T. III.}

\section*{Diet and general Regimen of Life.}

A learned phyfician [i] has given it as his opinion, that, as the time approaches for feamen to enter hot climates, their diet thould, by pofitive inflitutions, be varied from what is ufual at land, or at fea, in Europe; that inftinct has taught the natives between the Tropics, and in all hot climates, to live chiefly on vegetable diet and fubacid fruits; for which reafon, devouring large quantities of flefh-meats, and ufing the fame hard indigeftible food as might pafs off in cold weather, or more Northerly regions, muft alone have proved the caufe of the deftruction of many Englifh lives. He, therefore, recommends for trial, in hot climates, that the feamen on board men of war fhould not have falt meat of any kind above once a week, or twice; beef and pork alternately; and that every other fpecies of allowance fhould be provided in much greater abundance than is commonly done for fea-voyages:

\footnotetext{
[g] Franklin.
\([h]\) If thefe cloths were wetted with rum ; query, if they would not render the liquors fild cooler?
[i] Brocklefby.
}

\section*{BOOK III. CHAP. VI.}
by which regulation, he thinks, many of the ordinary mifchicfs, attending the conftant ufe of putrefcent falted ments, may be prevented.

The example of fome people in the Eaftern part of the world has been quoted, by many writers, to thew that vegetables are the natural appropriated food for hot climates; but there are fome circumftances attending it, in thofe Eaftern climes, which efcaped obfervation, or were not known. The truth feems to be, that the animal food, in fome of thofe Eaftern parts, is naturally unfit for food; of which Mr. Ofbeck mentions inftances, The Gentoos at Surat eat nothing but milk, butter, and vegetables. They have flefh in great plenty, but fuch as probably is not very wholefome, efpecially to thofe who come on thore after a voyage, and indulge their appetites. They are fubject to vomitings and diarrhoeas, and are in danger of lofing their lives. On this account, Mr. Ofbeck is of opinion, that Brama, or whoever at firft gave law to there people, had difcovered that thefe meats were very unwholefome to the Malabarians. "If all the Malabaric oxen (continues he) "were like thofe which we got, it is no wonder that the Gentoos " will not eat their flefh; the meer defcription of them would ". make the moft hungry lofe their appetites." And he attributes to this meat, that many of the Swedifh failors were afterwards exceedingly tormented with intolerably bloody ulcers. This gentleman's conjecture on the origin of their total vegetable dier feems, therefore, well-grounded; efpecially as the Jewifh law-giver prohibited the ufe of fwine's flefh, which in Paleftine, perhaps, had a particular ill quality, and was thought to have firft produced that horrid difeafe the leprofy, with which the inhabitants were fo much afflicted.
It is by no means certain, that a total vegetable diet is proper in hot climates, at leatt not in all of them, nor at all times indifcriminately. Although vegetables in thefe climates are better concocted and matured by the heat of the fur, and therefore more nutritious, and in general wholefomer, than in Europe; yet, after violent rains, the vaft quantity of water that defcends upon the earth renders all forts of roots, plants, and fruits, for fome time, crude and unwholefome. This more efpecially happens, if a courfe

\section*{J A M A. I C A.}
of hot dry weather bas proceded; for the heavien rains always follow fuch weather; and all vegetables then imbibe the water in a prodigious quantity, till they are faturated. At fuch times, they are very improper food, and often caufe very dangerous fluses among fuch of the Negroes as make too free with them. A vcgetable diet, from its extreme flatulence, occations other diforders, inflates the body into an immoderate fize, and may thus give an appearance of fatnefs; as Mr. Ofbeck obferved of the Gentoos. Some of the Negroes have the like tumefactions, which would more frequently occur, if they did not ufe falt and the country peppers very liberally. The flefh of fowls and cattle comes fooner to maturity here than in Europe. The texture of it is loofer, and the mufcular and tendinous parts lefs rigid. Their flefh, therefore, is not fo grofs, heavy, and hard of digeftion, as in Northern climates; but approaches nearer to vegetable food in its nature. A total abftinence from animal food, in Jamaica, would probably increafe the relaxation already promoted by the climate, and debilitate the bodily vigour to a very dangerous excefs. Even the Gentoos, we find, do not wholly abftain; for they ufe milk and butter (perhaps no fmall portion of their meal), which are nutrimental, and help to qualify the deleterious effects of their vegetables.

The moft appropriated diet, in my opinion, for the Weft-Indies, is a conftant misture of animal and vegetable food, (if any thing) inclining to the vegetable; that is, if an equal proportion be exceeded, it ought to be in favour of the vegetable \([k]\). And fuch is the variety and multitude of this clafs, molt of which are adapted to
\([k]\) It is certain, that, fo long as men have pienty of vegetables, and will ufe them, they are never troubled with the feurvy, whether they live in moift, warm, or cold climates. On the contrary, where there is a total want of them, all writers agree, that this diforder (or tendency of the animal juices to putrefaction) is the immediate confequence.

Dr. Falconer has a very judicious remark in refpeit to the preparation of flefh-meats in hot limates. "Meats little done," fays he, "are certainly eafieft foluble; lut they are, at the fame "time, esceedingly alcalficient, and run quickly into putrefacion; fo that it is much to be que"ftioned, whether they are to be chofen for thofe who eat a large proportion of animal fuod, as "fuch diet would be apt to induce a habit of boly highly fcorbutic, or tending to purrefiction, "except taken with a large proportion of regetables." On this account, he furpects, that the Frencls (wloo, for a warm climate, eat a large quantity of animal food) eat their meat fo much roalted, or boiled, from a kind of natural inftinct, in order to obvinte its fentic tendency, which is surch augmented by the greater heat of the climite.
nourifh, or refrefh the body, that the daintieft perfon need not be at at lofs infelecting fuch as are moft palatable to him. The olios, or pepper-pots, here (which conftitute the ordinary food of the Negroes, were the moff efteemed difhes among the Spaniards, and are equally relifhed by our natives or Creoles) confirm the propriety of fuch a diet as I have propofed; for they confift of flefh or fifh, greens, roots, plantains, okra-pods, and pulfe, differently mingled and prepared; fo that there is a great variety in their preparation and flavour; and every change in fucceffion of the ingredients prefents fome novelty, which is certainly no fmall recommendation; for they can be fo altered in tafte, by putting in fome vegetable or animal ingredients, and omitting others, as to feem entirely a new difh; and they are unqueftionably a moft wholefome kind of food for Europeans newly arrived, provided they are not too highly feafoned with pepper.

Inftead of attending to what reafon points out, mof Europeans, after their arrival here, perfift in devouring vaft quantities of animal food, with very little (if any) mixture of vegetable: they indulge in bad butter, cheefe, falt-beef, ham; and wath them down with deluges of porter, ale, bad cyder, and all forts of wines. The butter imported hither is often in a ftate of putrefcence when it arrives; in general, it is rancid. So acrimonious an ingredient in diet is noxious to health, diforders the fomach, and, oftener than is furpected, gives rife to thofe terrible fevers, whofe fource is a vitio ated bile [ \(l]\).
[l] The nourifhment is extremely hurful which is drawn from fubftances difficult to be dif folved, which tend to putrefaction, and cannot ealily be affimilated; fuch as dried-finh, and par:ticularly cheefe, which is ofien putrid, bacon, and old oil. Rutter, in warm climates, by being keps a fhort time on board fhip, grows rank and fetid; for it frequently happens in fhips, particularly thofe bound to the Weit-Indies in a warm feafon, that it melts away, like oil, in the firkins, by which it lofes great part of its falt, and, the inteftine motion being increafed by the heat, it becomes bitter and ftinks. Such grois foud not only relfits the powers of diseftion very much; but the juices, drawn from them, ane of a very acrid nature. Rouppe.

Many particles of flef, thaugh caretully falted, will in time grow putrid, as appears from Dr. Addington's experiment; who put a fimall picce of falted beef into water, and at the fame time a like piece of frefh, unfalted beef into another like quantity of water, and found the falted flefh to ttink firf ; which proves the tendency of it to putretaction, though the falt keeps it from offending the tafte or fmell : fo that falted flefh, as well as purrid air, has a tendency to occafion the feurvy, as well as other putrid diftempers.

Cliocolate

\section*{528} J A M A I C A.
Chocolate is wholefome, and well-adapted to repair the lofs fuftained by liberal perfpiration ; but it ought not to be too frecly ufed by Europeans at their firft arrival at leaft, unlefs it is well diluted with milk and water, in which way many of the Creoles prefer it.

All thofe fubftances fhould be cautioully fhumed which difpore the blood to putrefaction. Such are all rancid fats and oils; tainted fleth or fifh; a fleh or firh diet, diluted with fimple water alone; and excefs in all fpirituous liquors. Inftead of this, fuch a diet fhould be obferved as tends to acefcency; for this intention are all the varieties of vegetables, combined with found frefh meat of Herh and fifn; and the fubacid fruits, as lemons, oranges, fhaddocks, \&c. and wine, particularly Madeira, which, diluted with water, is one of the wholefomeft drinks in the Weft-Indies; it is highly antifeptic, ftrengthens the ftomach and organs of digeftion, and far preferable to the French wines. Next to this is weak punch, made with ripe fruit, and rum of at leart a twelvemonth's age. The vaft abundance of mild, vegetable acids, as well as the various fpecies of peppers, diftributed to thefe climates by the hand of nature, is a moft benevolent provifion. The moderate ufe of them, confidering the tendency of the folids and fluids to be relaxed, and contract a putrefcency, is abfolutely necefliary; and we find the natives, white and black, covet them with a fingular avidity.

The bifcuit aud flour, imported from North-America, are very apt to harbour weevils, efpecially when they are kept for any length of time. Thefe infects have fuch a cauftic quality, that, when applied to the fkin in form of a poultice, they will raife a blifter like cantbarides. How baneful then muft their effects be on the tender coats of the flomach and bowels! The beft means of driving them away, or deftroying them, is by expofing the flour, or bifcuit, to the fun, in the heat of the day, before it is ufed, or heating it in a hot oven : the former method compels thefe infects to thift their quarters; the latter kills them, and takes away the mufty fmell they have occafioned: care, however, muft be ufed to pick out all the dead, which ought never to be mixed with food.

Diforders of the putrid clafs are the molt to be dreaded by Euscpeans in this climate. Perfons, indeed, living in England and
BOOK III. CHAP. VI.
coller climates, are not exempt from thefe maladies; and they happen in both, moit commonly, from irregularity of diet, want of proper exercife, or from debauched habits of life.

An European, on arriving in Jamaica in good health, muft refolve, immeliately after he is landed, to purfue a regimen of diet, fomewhat different from what he had beca accuftomed to at home. He fhould eat lefs flefn-meat, and increafe his allowance of vegetables. This diet requires wine; but even wine fhould be moderately taken, and chiefly confidered as a mixture neceflary to qualify and counteract the putrefactive tendency of plain water. On the voyage to this illand, he fhould not gorge in falt-meat; but, laying in a flock of European vegetables, particularly onions, pickledcabbage, and the like, eftablith fome or other of them as a part of his daily meals. It is perhaps much owing to the conftant diet upon onions, that the Portuguefe at Madeira enjoy fuch good health and vigour. What thefe men eat through neceflity, others may by choice; fince the object to be obtained is worthy their purfuit, found health, and the poffeffion of ftrength and faculties.

But as an Englinman, who has been ufed to a plentiful diet of flefh during the former part of his life, might fuffer by a too fudden or unlimited abfinence from it; fo it is mof advifeable for them to change and qualify it gradually, abating a little of their flehmeat every day, until they can bring themfelves to a due proportion of animal and vegetable dinners, without fuffering any fenfible inconvenience. Their greateft danger is, that, on firf landing, they find their appetite unufually keen, after the tedium of thipfare, for five or fix weeks at fea, and ftimulated by the fight of feveral dainties they have been before unacquainted with; thus ftrongly folicited to gratify their palates, they may fall into hurtful exceffes, if they are not on their guard. A proper diet, with exercife in moderation, and the avoiding exceffes in eating and drinking, particularly the former, will procure and preferve a good flate of health; and a man, who regulates his life by a due conformity to this regimen, need not doubt of enjoying it in as great a degree here, as he might have done in other parts of the world.

Inflammatory fevers are not common in the Weft-Indies; nor a buffy appearance of the blood. The reafons affigned for this ex-

emption are, the warmth and moifture of the climate, copious perfpiration, and acidulated drinks. Excefs in eating, driuking, and exercife, between the Tropics, neither corroborates the folicis, nor increafes the denfity of the blood: thefe errors in the non-maturals may render the Weft-India blood acrid; but they certainly render the bile peccant both in quantity and quality. This is the paffiport to all the fevers in the Weft-Indies; for it may well be doubted, whether ever the blood is the primary feat of a fever, unlefs in perfons newly arrived in the Torrid Zone. Of courfe, the impropriety of frequent bleedings, as always practifed by the Freach, and ton often by the Englifh furgeons, muft be obvious; and the neceffity of carrying off the peccant matter by vomit and ftool, no lefs apparent. This opinion is ftrengthened by experience of the almoft conftant fuccefs which attends the treatment of them in this way; and the great mortality which has followed the free ufe of the lancet: and hence likewife appears the great efficacy of antimonial preparations, and of James's powder in particular, which operate in the manner recommended, and feldom fail of making a cure, if reforted to in time \([m]\).

Fevers in the Weft-Indies feldom put on the appearances of inGlammation beyond the firf twenty-four hours; after that, they become putrid, or malignant, and nervous. In the firt fage only of the difeafe, blood may be let, and even then in a very fmall
[ \(m\) ] The firft change, caufed by the tranfition from a cold into a hot climate, is a rarefaction of all the humours in the body, and of the blood among the reft; and, when the containing veffels do not expand fufficiently to give it a free circulation, the confequence muft neceffarily be a feverifh heat, anxiety about the pracordia, a difficulty of breathing, violent pains in the head, and uneafinefs. Thefe fymptoms are fometimes relieved by a fpontaneous bleeding at the nofe, which anfwers the end of venefection: and it is to be underftood, that I do not mean to condemu bleeding in all cafes, becaufe, where the party is young, vigorous, and contracts a fever immediately afrer his coming to the Weft-Indies, moderate bleeding, in the beginning of the diforder, may often be not only fafe, but neceffary; and, for this, the particular fymptoms are the beft indication. But it fhould be ufed in the Weft-India fevers with great caution, and frict regard had to the age and habit of body, the time that the patient has refided in the Welt-Indies, his general diet, and fuch other circumftances as may lead to the forming a competent judgement whether opening a vein be proper or not. Where there is a very ftrong pulfe and great heat, which is often obfervable in young, florid perfons, newly arrived from a cold climate, venefection is often found ferviceable, to check the too rapid motion of the fluids, and gain more time to treat the diforder properly. But fuch fymptoms rarely occur, after an European has been a twelvenonth in the WeftIndies; unlefs it may happen in Jamaica, by a fudden check of the perfpiration, on the firit ferting-in of the cold Northerly winds.

\section*{BOOK III. CHAP. VI.}
quantity. When the bilious matter has once entered the blood (which it will foon do, if fweats are incautioully ufed at firft), vomits and acid purges become lefs ufeful; and the morbid matter muft be thrown out upon the fkin by wild-fage tea, weak punch, or other liquors which promote a flight diaphorefis. In this diforder it often happens, that a weak purgative, or emetic, will produce uncommon evacuations. This thould not alarm; and the patient's ftrength fhould be well fupported with Madeira whey. This fever often fubfides into a remittent, and then into an intermittent, whofe beft remedy is the bark, which not only produces a wholefome bile, but invigorates the whole habit. Fluxes and dyfenteries proceed often from the fame caufe, a corrupted bile, and fometimes from a fuppreft perfpiration, or too free indulgence in crude, watery vegetables. Of all the fubftances known, the bark, and ripe orange or lemon juice, deferve, for their excellence, the name of feecific againft putrefaction. I knew an European gentleman in Jamaica, who regularly drank every day a fmall tumbler full of fweet or four orange.juice, ufing them indifferently, immediately after dinner, and enjoyed conftant health. I remember another who cured himfelf of a bilious putrid fever with no other remedy than the juice of ripe Seville and other oranges. And fo many inftances have been noticed of their antifeptic quality in thefe cafes, that the utmoft confidence may be repofed in their falutiferous effects.
Much more might be added on the fubject of thefe diftempers, their caufes, fymptoms, and method of cure; but, as I mean not to enter into an elaborate and medical inveftigation of them, I refer to the writings of Pringle, Huxham, Lind, Biffet, Hilary, Rouppe, and De Monchy, who have treated of them with the greateft ability.

Moft Europeans, on firf coming within the Tropics, are affected with an eruption upon their 1 kins of fmall red pimples, which goes by the name of the prickly heat. This is looked upon to be falutary, unlefs it is repelled; and it is remarkable, that it returns periodically every year, about April or May, on perfons who have refided a long time in the Weft-Indies \([n]\). It is, probably, caufed
[n] At leaft in Jamaica.
Y y y 2
by
by an extiaordinary flow of perfiration, and the current of the humours towards the ikin, promoted by the heat of climate. It muft not be unnoticed, that the periftaltic motion of the bowels being here perhaps more languid than in Europe, perfons newly arrived are often fubject to conftipations; and fometimes the faces are fo hardened, as to be excreted with great difficuley. The retention of them too long may therefore not only caufe an acrimony to lodge in the inteftines, productive of belly-ach, or other fpafmodic complaints; but give rife to bad fevers, by the abforption of fuch an acrid and putrid humour into the veins. It is neceflary, therefore, to keep the body always open. Chocolate tends to this effect; and it is obferved by Ulloa, that, at Carthagena, where it is to be had extremely cheap, there is not a Negroe flave Lut allows himfelf conftantly a regale of it after breakfaft and dimer; but they never ufe it fafing, nor without eating fomething with it. I have, in another place, cautioned Europeans, newly arrived, from iudulging too much in it, efpecially when made thick. I alluded to the coftlier fort of chocolate, manufactured here with cimamon, and other hot fices, which are the ingredients that render it improper for them. But the common fort, chiefly ufed among the free Negroes, and cthers of the natives who love it plain, is mixed up with maize; and this may be fafely ufed by fuch Europeans, diluted with milk and water: in this fate it will be found rather cooling than heating; and the addition of fugar makes it the more aperitive. Sedes figurate are feldom obferved in this climate; which may be afcribed to the weaker periftaltic motion above remarked, as well as to the diet purfued by moft of the inhabitants, confifting chiefly of vegetables and foluble fubftances.

In all hot countries it has been obferved, that healthy people generally perfpire very much; and this (from the greater difpofition of the humours to putrefcence) may be accounted one of the principal confervators of health. It is therefore furprizing to find Mr. Reaumur affert, "that perfpiration impairs the longevity of all "animals, by difcharging, not only the ufelefs, but nutritious, parts " of the animal lluids; and that an excefs of perfpiration feems to " be the reafon why the inhabitants of hot climates live a fhorter "terms than thofe who inhabit the temperate zones;" for, in fact,

\section*{BOOK III. CHAP. VI.}
this effect, by a wafte of actual fubftance, can only happen when the body is kept unreplenifhed, by fupplies of nutriment, to repair the lofs of what may be carried off by this means. Hence thofe, who are moft healthy, are known to dilute more frequently and plentifully than others; their perfpiration chiefly eliminates aqueous particles, which are feedily replaced ; they do not grow emaciated, but plump; and gain, inftead of lofing, weight; which would not be the cafe, if the fact was as Mr . Reaumur fuppofes. Neither is it proved, that the native inhabitants of hot climates are fhorter-lived than thofe of the temperate zones; fince there are many inftances to the contrary, both in the iflands, and on the continent of SouthAmerica.

The reapers in Pennfylvania, who work in the open fields, in the clear, hot fun-fhine, common in their harvert-time (about the end of June, or beginning of July), find themfelves very able to go through that labour, without being much incommoded by the heat, while they continue to fweat, and while they fupply matter for keeping up that fweat, by drinking frequently of a thin, evaporable liquor, water mixed with rum ; but, if the fweat Atops, they drop, and fometimes die fuddenly, if a fweating is not brought on again by drinking that liquor, or (as fome rather chufe in that cafe) a lind of hot punch, made with water mixed with honey, and a confiderable proportion of vinegar. Hence Dr. Franklin very properly concludes, that the quicker evaporation of perfirable matter from the fkin and lungs of Negroes, by cooling them more, enables them to bear the fun's heat fo much better than the Whites can do; though, abftracted from this, the colour of their fkins would, otherwife, make them more fenfible of that heat \([0]\). From the fame caufe, perhaps, it is, that they do not bear cold weather fo well, and are more apt to have their limbs frof-bitten in the Northern parts of America; their greater evaporation contributing. to chill them more feverely. However this hypothefis may be, it is certain, that Europeans, coming to refide in the Weft-Indies, are never known to enjoy their health and firits, unlefs they perfipe freely; and thofe, who continue to do fo, are not afflicted with ficknefs fo long as it continues: that regimen thefore of diet,
[o] Franklin's Papers on Philofophical Subjects.

\section*{J A M A I C A.}
of exercife, and cloathing, which anfwers beft for fupporting this regular flow, without carrying it to extreme, is the moft falutary for European ftrangers to purfue. The natives, black and white, are not fubject, like Europeans, to bilious, putrid, and malignant fevers : they are not only habituated to the climate, but to a dif. ference in refpect to diet and manners; which works no fmall change in mens confitutions. A Creole, if he was to addict himfelf to that kind of diet which is known to have a tendency to produce putrid diforders, or an acrid, corrupt bile, would no more be exempt from them, than an European. I knew a Creole boy, of about fix years of age, who, being reftrained by his mother from eating any fort of fruit or vegetables (the former, left they fhould generate worms; and the latter, through fear of acidities and gripes) made his principal meal every day on butchers meat, fowl, or filh, without falt, feafoning, or any bread, except now and then a very fmall quantity, and wathed it down with plain water. The boy, after perfifting for fome mouths in this regimen, was feized with a very violent, bilious, remittent fever, accompanied with a delirium and other bad fymptoms, that threatened his life; but, by adminiftering the bark inwardly, applying poultices of it externally to the ftomach and abdomen, and often foaking his feet in a ftrong warm decoction of it, he at length recovered, and doubtlefs owed his life to this noble fpecific, thus thrown into his body by fo many different ways. But the acrimony in his blood was apparent, from the vaft abundance of boils, whish broke out afterwards from head to foot. \(I\) think it probable, that the luxuriant flefh-diet of Englifhmen at home, together with fome fcorbutic taint in their blood, may be affigned partly as an occafional caufe of their being more obnoxious, generally fpeaking, to bad fevers in the Weft-Indies, than many other Northern mations. This, however, is not the fole caufe, becaufe we find that Englifh women, who are alfo equally flefl-eaters, and liable to the fame fcorbutic taint in a degree, are not fo often feized with thele dangerous fevers; nor are they attucked fo violently, inor to fuch a degree of maliguancy. Perhaps, we may impute this diverity to the more cool and temperate regimen of the women, their lefs expofure to heat and hard exercife in the fun, lefe addiation to intemperance, and late hours.

\section*{BOOK III. CHAP. VI.}

There may be other reafons fuggefed for the difference obferved between the Englifh mea, and thofe of other countries. Firft, their exceffive indulgence in a promifcuous commerce on their firft arrival, with the black and mulato women; and this, with fo little prudence and caution in their amours, that they are almoft morally fure of being very fpeedily infected. The facility with which the milder fymptoms of the virus are removed, in this warm atmofphere, ferves only as an incentive to thefe perfons, and renders them indifferent and carelefs about confequences; for a gonorrbea fimplex yields in a very few days to gentle medicines. Encouraged, therefore, to perfevere in this unheeding courfe, they in due time attain to the higheft honours this impure contact is qualified to confer, as a reward for their temerity; the confequence of which is, their being laid under abfolute neceffity of praying to their god Mercury for relief. Not a few alfo arrive here, who have already paffed through many of thefe fiery trials in London, and other feats of debauchery. It has been remarked by feveral of the moft eminent phyficians, and fands confirmed by repeated experience, that mercurial medicines are attended with the moft pernicious effects upon fcorbutic habits, and on fuch as are difpofed to putrid fevers. Thefe gentlemen all agree in opinion, that the power of mercurials chiefly confifts in weakening and relaxing the folids, and in attenuating and diffolving the fluids; a human body therefore, which has recently undergone a mercurial regimen, is already on the very brink of putrefaction, and very ill prepared to refift the affault of a putrid fever. Thus in the Scurvy, a very fmall quantity of mercury is fufficient to bring on a falivation. When this diforder raged among the imperial troops in Hungary, four-hundred foldiers, who took mercury contrary to the advice of their phyfician, all died to a man in a falivation. Pringle obferves, that perfons who have lately undergone a falivation, and whofe blood is confequently in a fate of diffolution, are much fooner infected by noxious effuvia than others; and, that malignant fevers, and the fcurvy alfo, are rendered more fevere and dangerous in fuch circumftances. To the fame effect is the remark of \(D e\) Moncly, who found, that, after ufing mercury in zenereal difor-
\[
536 \quad \text { J A M A I C A. }
\]
ders, the Peruvian bark lofes a great part of its efficacy, in the moft virulent cafes. Thus, that admirable medicine the bark, which in found habits proves a fovereign autidote againut putrid and malignant fevers, is robbed of its virtue by the putrefacive counteraction of mercurials; thefe noxious effets therefore, conjunaty with any morbid difpofition of the humours, or with a bad air, and improper diet, or too violent exercife in the fun, may eafily and naturally either haften the attack of a putrid diftemper, or promote the exacerbations of it, if already formed; and, fuch being allowed the predifpofing caufes, it is eafy to admit, that a common fever may foon degenerate into a putrid, and even one of the mont maIIgnant fiecies. The female flaves, and even free Blacks, in our plantations, are few of them exempt from this virus; but they conceal it lyy every artifice in their power, that no delay may happen in their bufinefs; for a hindrance in this refpect would be a certain lofs of profit to them. What Ulloa mentions of the Spamiards at \(Q^{2 u t o}\), is applicable to thefe traders: he tells us, "The "vencreal difeafe is there fo common, that few perfons are free " from it; even little cbildien, incapable by their age of having " contracted it actively, have been known to be attacked with it "in the fame degree as perfons who have acquired it by their "debauchery ; the chief caufe of its prevalence, is negligence in the "cure. This difeafe muft naturally be thought in fome meafure " to fhorten their lives; though it is not uncommon, to fee per"fons live to feventy -five years or more, who have never been en" tirely free from that diftemper, either hereditary or contracted, "from their early youth." It is probable, that the Scotch and Irifh, who come over with founder conftitutions, lefs impaired perhaps by fcorbutic and venereal taints, are, for this reafon, more healthy than the Englifh; befides, the Scotch, in particular, if not more chafte, are at leaft in general more circumfpect in their amours.

1 knew an European gentleman, who, by imprudent connexions of this fort, was infelled not only by the lues venerea, but with the yarws at the fame time; under thefe two diftempers (than which there are few in Pandora's box more loathfome), he lingered for a
long time; the remedies proper for the one, only ferved to exafperate the other; and therefore not being able, by the powers of mercury, to obtain relief, he was obliged to leave the ifland, in the hope of receiving fome benefit from the advice of phyficians in Great Britain. Another, a young man of a lively but lafcivious turn, for feveral months after his arrival, was fcarcely ever free from venereal infection, having not patience to wait the cure of one taint, before he contracted another ; by this infane conduct, a falio vation became neceffary; debilitated with this, and his preceding exceffes, he was fuddenly, upon fome little irregularity, feized with a fever, fo flight at firft, that, had not his conftitution been worn down, and his whole habit degenerated, it would have been eafily removed; but, being aggravated by the tabid ftate to which his body was then reduced, it turned by degrees to a highly putrid diftemper, and carried him off.
Cataftrophes of this nature, it is to be feared, have but too often occurred in the inland, to the untimely deffruction of many an improvident youth; nor are our furgeons wholly to be exculpated, who are but too fond of prefcribing mercurials upon all occafions, without adverting to their fatal operation on fome habits.

Ardent fpirits, particularly brandy, and frefh difilled rum, in exce/s, are no lefs injurious in all cafes where the humours have a difpofition to putrefcence; although, when ufed with due moderation, and not too frequently, they are antifeptic, or antiputrefcent. What chance have thofe men for longevity, who af as if they were engaged in a perpetual confpiracy againft their own health; who are inceffantly inflaming and irritating their blood and juices with an acrimony, that is productive of mortal diftempers; who indulge beyond meafure in fiery fpirits; carelefsly hurry about, and ufe violent exercifes in the hotteft part of the hottert days \([p]\); fit up late at night, deprive their bodies of refrefling fleep, and expofe them to the night air; and laftly, who plunge
\([p]\) From a great increafe of corporeal motion, and a want of repofe and fleep, the fame confequences are to be expected as from fevers; the nature of which confifts in an accelerated circulation of the blood, attended of courfe with an exceffive heat; whence proceeds an enfuing putrefcency of the humours : juit as a bare, killed after being hard run for a confiderable time, becomes fooner tainted than one that has been killed upon its form.

De Monchy.
Vol. II.
Zzz
headlong

\section*{J A M A I C A.}
headlong into venereal debauches, and a mercurial regimen! ought the premature fate of fuch men, to be charged on climate? They who follow fuch improper courfes, muft count on their natural confequences; and unlefs, by the perverfion of their intellectual faculties, they can be acquitted as lunatics or idiots, they muft expert, in the award of divine juftice, to be deemed guilty of felfmurder; having willfully, wickedly, and, I am fure, I may add roantonly, put themfelves to death, by means as effectual, as if they had ufed arfenic, or a dagger.

Early-rifing, which has been fpoken of with the greateft encomiums by medical-writers, for its contributing very eminently to the health, vigour, and activity of animal life, as well as rational, is particularly neceffary in Jamaica; and no man ever attained to longevity here, who was not an early rifer; nor are any fo healthy, as thofe who religioully addict themfelves to this practice. It is neceffary here, becaufe nothing more relaxes the body than the warmth of a bed, more efpecially if fleep is indulged at a time when the fun has afcended to fome height above the horizon, and renewed the heat of the atmofphere [g]. The morning air is here delightfully cool; and the moft agreeable time for exercife is before, or juft about, fun-rife; they who exercife at this hour, feel their bodies refrefhed and vigorous, fo as to fuffer no inconvenience from heat during the remainder of the day. The bed fhould be forfaken by fix o'clock at furtheft ; many there are who rife at five; this fuppofes an early retreat to reft, the preceding evening; the more common bed-time at night, is from ten to eleven. They who lounge till eight or nine in the morning, and make it an habitual practice, cannot be long free from diftemper; it is not only,
[q] It is a curious, although not a new remark, that the inhabitants within the Tropics fleep lefis than thofe who dwell in the cold, Northern climates; I believe, the difference in this refpect, between a healthy perion in Jamaica, and another in Britain, may, on a fair calculation, amount at leaft to thirty days per annum. If an inhabitant of England fleeps eight hours a night, at an average the year throughout, the inhabitant of Jamaica will be found to fleep not more than feven; confequently, the latter poffefies thirty days, or upwarls, of confcious exiftence more than the former; and, at the end of twelve years, may be faid to have outived the other by a full twelvemonth. How far this difference may tend to free the Welt-Indian from fome diftempers, iucident to Northern drowGinefs, or to irritate his animal fpirits, or enliver his faculties, has not yet been examined ; but it is probable, that it may obviate, in fome degree, the relaxing eifects of a warm atmofphere, and fweep away that gloom from the foul, which Noyember weather is fo apt to caft upon it in England.
that an excefs of fleep, inftead of nourifhing and refrefhing, enervates and emafculates, the human frame, but the body gains not a moment's refpite from heat, or relaxation; it is heated during the day, it is heated again by fitting up late; and, after retiring to bed, it is plunged into a kind of hot bath; and lies ftewing in its own vapours: while, as the fun draws nearer the meridian, the air grows more fervid every moment. So beneficial indeed is the cuftom of early rifing in this climate, that it fortifies the organs againft the invafion of fickuefs, and is of more importance than any other branch of regimen; more efpecially, if joined to moderate exercife.

It is difficult to fay, what degree of exercife a man may ufe here without danger; it muft perhaps be confidered relatively to mens different conftitutions, and ftrength. The weakeft are ftrengthened by it, and the ftrongeft become weak without it. In general, I believe, the inhabitants, efpecially Europeans, ufe it to a greater degree every day, than men in general do in England, and with feemingly lefs fatigue. I have myfelf traveled frequently fifty miles in a day on horfeback, without fuffering any laffitude, and always found fuch journies moft fupportable, the earlier I fet out in the morning [ \(r\) ]. But, confidering the expence of perfpiration and fpirits, which the body undergoes here daily, efpecially in the Southern diftricts, we ought to infer, that a lefs degree is requifite here for health, than in colder climates; for it feems reafonable to fuppofe, that we fhould endeavour here, rather to reftrain, than promote, all violent motions of the blood and humours, and preferve them calm and temperate, at the fame time not fuffering abfolute inaction and floth to poffefs us fo far, as to caufe a flagnation ; extraordinary exercife is lefs hurtful than fuch an indolent, motionlefs habit of life. The beft exercife in this climate is geftation, either in a wheel-carriage, or on horfeback; but the latter is to be preferred, except in long journies. But walking is too laborious, and attended with too great a watte of fubftance and fpirits. The common practice of many in the towns, who are continually in agitation, and take the fame liberty of buftling about on foot, at all hours of the day, as if they were in London, is evi-
[ \(r\) ] Sixty miles are ufually reckoned heie a day's journey, on horfeback.
dently abfurd. It feems probable, that fo much hurry, which in creafes the momentum of the blood, and throws the whole body into violent heat, which is augmented by the intenfe ardour of the fun at noon, may bring on fevers of the moft fatal kind. This practice is equally injudicious and unneceflary; the former, becaufe it may be productive of fevere illnefs; the latter, becaufe, by rifing early, much cooler hours might be found for tranfacting all the bufinefs, which any man who values his health can, or at leaft ought to, go through in this climate, during the forenoon. When bufinefs demands attendance abroad, they ought to choofe the mo:ning and afternoon for difpatching it, and keep within doors, or in the flade, at that time of the day when the folar rays are felt with moft force and inconvenience; but, if they cannot avoid expofing themfelves, they ought to walk flowly, and ufe fome other precautions, to guard againf any bad effects. The Negroes arm their heads with a load of handkerchiefs, carefully twifted about them, in form of a turban. The Eaftern nations ufe the turban, which is not more calculated for ornament, than as a prefervative againt the violent action of the meridian fun upon the delicate, capillary vefiels in the head; the obftruction of which occafions obftinate head-achs, and fometimes that fatal apoplexy, called by the French, coup de foleil. In the French, Spanifh, and Portuguefe colonies, umbrellas are in general ufe, and found extremely ferviceable to protect the head and body from this unwholefome fultrinefs. But our brave countrymen, defpifing all thefe precautions, as too ridiculous, or too effeminate, courageoully face the fun at high noon; and will fuffer death rather than put on any armour for their defence. It is not therefore without juft reafon, that the Spaniards, who fit calmly within doors, whilft honef John Bull is anxioully trotting about his bufinefs, all befimeared with duft and fweat, fay proverbially, that, "no animal, " except a dog and an Eng lijman, is to be feen walking the flreets " in the middle of the day."
Doalor Hilary exclains moft profanely againft dancing: "It is, " fays he, too violent an exercife for a hot climate, and many in" jure their health very greatly by it ; I have known it fatal to " fome; neither is it ufed in the Eaftern hot countries. But moft
" of the ladies are fo exceffively fond of it, that, fay what I will, they " will dance on."

The doctor very rightly concludes his foliloquy, in defpair of prevailing on his fair audience to defiff from an amufement fo delightful to them, and, in my opinion, fo innocent, if not carried to excefs. 1 fear the doctor forgot his reading, when he afferted that no fuch diverfion was in ufe in the Eaftern hot countries; there are none of them, perhaps, where it is not in ufe: we find it in Afia, in Africa, and every part of America. The Indians of South America are particularly fond of it; even the grave Spaniard here is melted into an affection for it, and capers in farabands and faldangos; the natives of Jamaica are dancers from their infancy. The domeftic life of women, which prevents them from exercifing abroad as much as the other fex, naturally in clines them to love thofe active amufements which may be followed within doors; dancing therefore, confidered as an exercife, is healthy and proper for them, promotes the circulation of the blood, and refrefles the fpiits in the moft agreeable manner, by the chearfulnefs and gaiety which it infpires. In Jamaica, indeed, it is fcarcely to be called an exercife weitbin doors; the windows are all thrown open, and the dancers enjoy a conftant fucceffion of frefh air. It is very different here in its effects from what it is in cold countries, where the heat, and offenfive fmell of fires and lights, and the atmorphere of a clofe apartment, from which the external air is carefully excluded, and which is further vitiated by the breath and copious perfiration of a multitude of perfons crowded together, make it productive of no falutary confequence. It has rarely been prejudicial in Jamaica, except where common prudence was wanting afterwards, and the parties have carelefsly expofed themfelves, when in a profufe perfiriation, to the damp and chilling midnight air. They, who are more cautious, cloathe themfelves properly on going home, put on dry, well-aired linen, take a little draught of fome warm liquor at getting into bed, and feldom feel any bad effect, even after what fome may think an excefs; the principal reafon for which may be, that the pleafure and vivacity, infeparable from it, in fome meafure counteract the laffitude which fo much mo. tion (mechanically confidered) would naturally bring on, and prepare the body for a found and undifturbed fleep, which reftores very fpeedily the wafte of firits; infomuch, that I have known in this ifland,
a regular dancing-bout perfifted in for a whole week, not intermitting a fingle night, without any ill confequence to the parties concerned. However, it is certainly more advifeable to ufe it in moderation; and, thus ufed, it will prove, in my humble opinion, a healthful recreation, an excellent antidote to cares, and a happy promoter of nuptial unions.

The utility of batbing need not be infifted on, where we find it practifed by the White and Negroe natives fo univerfally, and conftantly. Frequent wafhing the body with water, cleanfes the perfpiratory ducts from that foulnefs that is continually falling upon them from their own condenfed, dewy atmofphere; the middle of the day is fitteft for this operation, in water which has been placed fome hours in the fun-fhine, fo as to acquire a tolerable degree of warmth. The Negroes wafh in the open rivers at that time, and find it moft wholefome, by experience; they have a different opinion of cold-bathing; and indeed it feems not proper for this climate, except at a very early hour before fun-rife, and in the cooler mountainous or Northfide parts, rather than the Southern: in the latter, I have known three or four fatal accidents which have followed plunging in cold water in the heat of the day. It fhould feem therefore more eligible to follow that ufage, which experience fhews to be not only healthy, but neceffary to clean linefs, than to try experiments which have proved unfuitable to the climate, and are condemned by the native inhabitants, whofe judgement has originally been founded upon trials, of what cuftom was hurtful, and what harmlefs.

The influence of the paffions upon health, has been the fubject of many differtations from medical pens; in this country it muft operate with double force, where men are more feelingly alive to joy or inquietude; where the nervous fyftem is far more irritable than in a Northern climate. Men of lively imaginations and great vivacity (and fuch are the natives of this ifland) are more liable than others, to fudden and violent emotions of the mind, and their effects; fuch ftrong and fudden tranfports may actually throw men into acute difeafes: but the flow and durable paffions, folicitude, grief, ftiffed refentment, and vexation, are more often dangerous and mortal. Thefe confuming enemies to health difturb the functions of the ftomach, and vitiate its juices, fo that no wholefome chyle or nourifhment can enter the blood; the patient languifhes under a bad habit of body, contracted from this caufe,
pines with atrophy, and want of refrefhing fleep; bence a complication of difeafes fucceeding each other, from bad to worfe; and, unlefs he can fubdue his anxiety, and reftore peace to his mind, he gradually finks under it, and dies, as it is faid, of a broken beart [s].

Anxiety affects men in this country in proportion to their fenfibility, and to its duration. When once it has taken a firm hold, it is generally productive of mortal confequences. Multitudes have expired here under the preffure of this fatal caufe. Hurried by levity of difpofition, or want of thought, into an expenfive way of living, or imprudent fchemes and purfuits; diftrefs has poured in upon them at once like a deluge. Fretted, and wearied out at length with the conflict, and clofely befet on all fides with implacable creditors, they have yielded paffively to their fate, and funk down into the grave, under a load that was too grievous for their mind to fupport. In fuch defperate circumftances, a flight indifpofition is foon converted into one more formidable; the fymptoms become more and more dangerous, and the malignancy increafes every day, till, in the end, it has deftroyed thofe, who required the aid of good fpirits and chearfulnefs, to fecond the efficacy of medicine; every drug bas loft its ufual virtue; the organs refufe to perform their functions; and thus, the difeafe in the mind has led the way to a fure conqueft over the body. The life of an induftrious planter is one continued feene of activity, both of body and mind. He is neceffarily engaged in many public duties, as well as private affairs. His flumbers are often difturbed with corroding cares, the failure of feafons, the cafualties to which his property may be liable, and the importunity of creditors. The day is often infufficient for the multiplicity of buinefs which he finds himfelf obliged to allot to it. He ought, therefore, to arrange his various occupations, and make them conform to a certain orderly train and method, that he may proceed in them with the greater eafe and difpatch; and, by this means, retrench great part of the perplexity, which mult otherwife enfue. The like regular method he fhould inforce throughout all the inferior departments of his plantation; and, weighing well the uncertainty of all human poffeffions, and the frequent vicifitudes of fortune, he fhould determine with himfelf to confine his annual expences of living within certain pofitive bounds, fo as not to exceed, if poffible, one

\footnotetext{
[s] Cadogan on Chronic Difeafes.
}
third part of his clear income, computed upon the average of five or feven years preceding. Some caution may likewife be requifite in his dealings with mankind; but there is one, which particularly merits his conftant recollection; which is, that more perfons in this country bave been made unhappy, and even ruined, by other mens debts, than by their own. Let him therefore, above all things, keep a frict guard over the liberality or credulity of his own temper, and refolve inflexibly, Never to be bound for any man, and to confider debt as one of the moft fubftantial evils in life. By a courfe of even moderate œconomy, he may have fome little overplus at the year's end; and let this be applied (if neceffary) to fupply the wants of his friend, or his dependant. Men are not injured here fo much by what they lend, or give away to the neceffitous, as by fetting their hands and feals to paper too often, and for too confiderable fums; which unexpectedly rife up in judgement againft them, or their family, after many years have elapfed. By engaging as collaterals, they have made themfelves principals; deftroyed their peace of mind; involved their eftates, and beggared their children; without effentially benefiting their pretended friend: for fuch is the ftrange difpofition of a finking man, that, like one who is in danger of drowning, he catches at every ftraw within his reach; thinks of nothing but temporary expedients; and, between hope and defpair of extricating himfelf from diftrefs and ruin, he will, even when he knows it will turn out wholly unavailing to his own affairs, infiduoully draw his beft benefactor into the fame abyfs, to perifh with him.

Misfortunes here, in planting and in trade, are neceffarily very frequent, where men often adventure without limits; give, and take credit; are fubject to be hurt by mifplaced good-nature and confidence; and liable to various calamities and loffes. It is difficult for men to reafon themfelves into a calm compofure under afflictions, or vexatious circumftances, by all the arguments that philofophy or religion can furnifh :
"Durum: fed levius patientia,
"Quidquid corrigere eft nefas."
" 'Tis hard: but patience muft endure,
"And foothe the woes it cannot cure."
This is the remedy which philofophy fuggefts, as the beft means of alleviating thofe ills, that vexation only ferves to render more fharp
and intolerable. The heathen moralifis called it, for this reafon, "portus mijeriarum; the afylum of mileries:" but Cbriffian patience brings infinitely more comfort and fupport. This inftuats us to believe, that nothing befals us, except by the permiffion, or the direction, of Divine Providence; it attracts our dependence upon that Being, who can enable us to bear what, otherwife, the frailty of our nature muft fink under; it informs us, that difeafes, pain, lofs of friends, ingratitude, difippointments in our affairs, and all the various ills that feff is beir to, fall to the lot of the good, as well as the wicked: the Divine Being exercifes our virtue with fuch trials; corrects our vices and miftakes by thefe examples; leads us to foberer purfuits and councils; and excites us to repofe our future thoughts on his care for our happinefs, by fubmitting to his wife and provident difpenfations, with ferenity and fortitude. Thefe trials, in a greater or lefs degree, every mortal muft expect to meet with, in the courfe of his life ; he fees continual inftances of them, if he will but turn his eyes to view what befals the reft of mankind; he ought then to prepare to meet them himfelf; never to be too confident under good fortune, nor too defponding under the common mifchances to which all are equally liable. Infead of giving way to thofe corroding thoughts, which keen fenfibility, when too much indulged, is fure to aggravate with frefh tortures every moment, he fhould apply himfelf to meditate on the means of leffining his torment, by fubmiffion to the Father of all inen, and frequent fupplications to him for affiftance and relief: books, exercife, bufinefs, chearful fociety, any innocent amufements, fhould be reforted to, for unbending the mind, and breaking the iron chain of forrowful reflection. Too many have flown to the bottle, or to laudanum, to quaff the fweet oblivion [ \(t\); fuch men are cowards, who have neither coulrage to bear up againft their misfortunes, nor to end a painful exift-

\section*{ence}
[i] I canot avoid tahing fome notice of the abufe committed by many perfons here, male as well as female, in their daily potations of this baneful mixture; feveral of both fexes love to become inebriated with it, and make their boaft, that, of all liquors, it is not only the fpeedielt and cheapeft, but the pleafanteft, to get drunk with. This vice (for a notorious vice it is) has ruined, and fill ruins, the beauty of many a fine woman in this ifland, both in complexion and conititution ; for it fo poifons the whole corporeal mass, as to render the lips of a deadly pale or livid hue, and the face cadaverous. After frequent repetitions of it, fo importunate and ftrong are its folicitations, as to admit of no denial, till, in the end, it conftrains even its debauchees to abufe it. One morning I paid a vifit to an elderly gentleman, whom I had frequently feen, and talked with beVoL. II.
ence by one bold ftroke; to end it indeed in fuch a manner, were but a temporary cure, for this world only; and the means, perbaps, of making that mifery eternal, which otherwife would have been, at the worft, of fhort duration. To combat with fteadinefs againft adverfity, and refolve
fore, at other places. I found him fitting in a chair in his hall, and, accofting him as ufual in as civil a manner as I could, I perceived that, contrary to his former polite and friendly manner, he fat regardlefs of me, and every thing elfe about him, except that his eyes were fixed upon me with a ghaftly flare. Upon this, I appeared to take no further notice of him, but, addreffing myfelf to the other company prefent, fat down, and difcourfed on different fubjects. Soon aftier, he withdrew, into an adjoining room, and, itaying there not half long enough for me to be informed what his diforder was, he returned alert and chearful, with a bottle and a fpoon, and kindly afked me if I would take a cordial with him; which I declined doing, as I did not know the liquor; but he frankly told me, it was liquid laudanum of his own preparing, of which he had juft drunk one fpoonful, and fhould at lealt twice repeat the draught in courfe of the day, according to a cuftom he had practifed for fome years paft. It was furprifing to me, to fee how fuddenly and powerfully it had operated upon him; for, inflead of the torpid, fuiritlefs creature, whom I firit faw, he was, in the fpace of five minutes, fluhed in his countenance, gay, talkative, animated throughout, and univerfally changed in mind and body.
This puts me in mind of the account which travelers have given of the Perfians, whio, like other Eaftern nations, take pills of folid opium, which fome of them gradually increafe to a dofe that would deltroy half a dozen Europeans. Within half an hour after taking the pill it begins to operate, and a thoufand vagaries delight their imagination; they laugh, fing, and talk extravagantly, like men in a delirium, or meddened with wine; but, after the effeet is gone off, they find their fpirits exhautted, and grow penfive and melancholy, till they repeat the dore again: by this means, fome make it fo necellary to them, that they cannot live without it.
I have known a whole compai:y of men in Jamaica, at table, pledge one another in this liquor. The women, in general, are more moderate in the quantity they take at once; but, although they lip it drop by drop, it is repeated fo frequently, that the whole they take in a twelvemonth is pretty near as much, as what others drink, who recur to it feldom, but in larger dofes at a time; and jts effects, in both cafes, are equally fatal. Some ladies are never without a botle of is in their pooket, with fume lumps of fugar; and fwallow it with great privacy, and by ftealth, twice or thrice every day, increaning the dofe fo high, as to eighty or one hundred drops. They pretend it is theit "c cwarum dulce levamen," and abfolutely requifite for their comfort and happinefs.
" Their only labour is to kill the time,
"And labour dire it is, and weary woe.
"They fit, they loll, turn o'er fome idle rhyme;
" Then rifing fudden to the dram they go,
" Or faunter forth with tottering fteps, and flow;
\({ }^{6}\). This foon too rude an exercife they find;
st Strait on the couch their limbs again they throw,
"Where hours on hours they, fighingly reclin'd,
"Enbrace the vapoury god, foft-breathing in the wind."
Thomson.
The Turks, and other difciples of Mahomet, betook themfelves to this mode of inebriation, beRave their religion forbad the ufe of wine. The Afatic Indians are faid to indulge in it, not fo much to make them fleep, as from a notion, that it is a great provocative, and quadifies them the boter for libidinous exercifes.

Sottifners refolve to conquer it, is the higheft teft of a good mind, true courage, and found underftanding; in other things, men will perfevere through every difficulty, and fucceed in defiance of every obftacle; nothing more is required, than the like firit of perfeverance and fortitude, to furmount the greateit ills of life, and trample upon thofe diftreffes, which ceafe to be burthenfome, when we have learned to bear them; but ever redouble their preffure upon us, when we bear them with impatience and timidity.
Sottifhnefs then and luft being the chief founders of its ufe among thefe Eaftern people, what opinion are we to form of thofe ladies in our Weftern hemifphere, who are bewitched to the fame deteftable cuftom? If drunkennefs is fo difgraceful to the fair fex in particular, they furely ought to reflect, that it makes not the leaft difference, in point of difhonour, whether they fuddle themfelves with laudanum, or with brandy; neverthelefs, there are too many among them, who, if a dram was to be offered them in public company, would confider it a high affront put upon them, and yet take the firtt convenient opportunity to beaftialize themfelves with their favourite liquor, till they are deprived of their reafon, and driven into the moft incoherent ravings in their converfation, and the wildeft extravagancies in their conduct; thus facrificing fenfe, beauty, health, fame, and even virtue, to this pernicious habit. All phyficians agree, that it is exceedingly hurtful to thofe of weak and delicate habits, and brings on prematurely the infirmities of old age; for, among the Eaftern nations, it has been obferved, that fcarcely any, who begin this practice while they are young, live to be above fifty. It produces paralytic diforders, and palfies; hinders digeftion, and palls the appetite. It likewife is charged with caufing a relaxation of the lower jaw, and a ftammering fpeech; in regard to the latter bad effect, I am morally fure, we may afcribe the drawling, faltering pronunciation of many women and men in this ifland, to their exceffive ufe of laudanum.
In fome cafes, and in the hands of a difcreet phyfician, it is a noble remedy, and particularly in the diftemper called the locked jaw, fo frequent in the Weft Indies; and not feldom, as a palliative in the colic, and belly-ache: but thofe perfons, who make it a part of their daily diet, receive all the injury it is capable of producing; and preclude themfelves from all hopes of relief from it, in thofe maladies, where it might otherwife have proved their certain friend.
The firm hold which fo horrid a fanhion has taken in this ifland is really unaccountable, unlefs we fuppore that the force of example, and the alluring perfuafion of inveterate female tipplers, have combined with the deluding charms of this Circean draught:
" Offering to every weary vijitor
" Their magic liquor in a cryftal glafs,
"To quench the drought of Phœebus; which as they tafte,
" (For moft do talte through fond, and curious thirft)
"Soon as the potion works, their human count'nance,
" Th' exprefs refemblance of the gods, is chang'd
"Into fome brution form of wolf, or bear,
" Or ounce, or tiger, hog, or bearded goat,
" All other parts remaining as they were;
"And they, fo perfect in their milery,
" Not once perceive their foul disfigurement,
" But boaft themfelves more comely than before,
"And all their friends, and native home forget,
"To roll with pleafure in a fenfual ftye."

Milton. S E C T.

\section*{Of Sugar, confidered Medicinally.}

There is no better prefervative, perhaps, againft thofe difeafes which owe their rife to a putrefcency of the humours, than the juice of the fugar-cane, and its various preparations. The effects they produce on debilitated Negroes, and on brute animals, whom they reftore to health and vigour, rendering the moft emaciated plump and lively, are extremely remarkable. There cannot be a fronger recommendation of any fubfance proper for aliment, than to fay, that it is eagerly devoured by all animals, and offenfive to none; more efpecially, as they, who are governed by unerring inftinct, are never known to delight in any fpecies of food, which is inimical to their health: but human reafon and experience correfpond with this inftinct, in recommendation of thefe mild, nutritious, and falutary effects.
It has been obferved, that, fince fugar and aceffent fubftances have come into vogue, all putrid difeafes, the fcurvy no lefs than putrid malignant fevers, the dyfentery, and even the plague itfelf, are much abated. The ableft writers on thefe difeafes inention fugar or melaffes as neceflary ingredients in the diet of patients afflicted with them; and that their virtue confifts in the efficacy with which they refift, and counteract, all putrid humours. The Spaniards in the Weft Indies, Senfible of this effect by long experience, ufe it univerfally; it forms a part of all their collations, and they never drink even a glafs of water without previouly eating fome conferve, or fweetmeat. In the putrid yellow fever, Duedor Mc Bride recommends very flrenuoully the juice of the Jugar-cane before it is thoroughly ripe, diluted and acidulated with the frefh juice of lines or Seville oranges. Let our men (fays he) in the navy be as well cloathed as in the army, and let them be allowed, whiift at fea, a daily portion of fugar; and, I will venture to promife that, in a time of war, we fhall annually fare fome thoufands of very ureful lives.
To the ufe of this, and frefh vegetables, which now make up fo great a part of the diet of the European nations, it is to be afribed, that we at this day fo feldom hear of the dreadful putrid difeafes which formerly fwept off fuch multitudes, every thirty or forty y yars, under the name of plagues.

The diet moft fit to preferve health in hot climates muft confiff (for the greater part) of vegetables, and of thofe fubftances, which produce the greateft quantities of air, in order to afford a fufficient quantity of antifeptic vapour, to make up for the extraordinary wafte of air, which is carried off from the fluids by infenfible perfiriation; and thofe perfons mult inevitably fall into putrid difeafes, who eat much animal food, which produces but little air; who drink much of fpirituous liquors, which contain no air in themíelves fcarcely, and prevent the ready extrication thereof from the aliment, during the digeftive procefs; and who incautioully expofe themfelves to a moift atmofphere, which hinders any thing but the aërial part of the perfpirable matter from being carried off.

The great efficacy of vegetables confifts partly in their containing a large quantity of this fixed antifeptic air or vapour, and their impregnation with a very fweet juice, or mixture of faccharine oil and falt, which doctor Tiflot obferves is highly falutary. All the culinary roots, even in Europe, are full of this kind of fugar, which may eafily be extracted from them. Experiments to this effect have been tried on feveral; and, in particular, eight ounces of the juice of fkirret yielded one ounce and an half of fugar [u]. This faccharine juice predominates in moft of the fruits and efculent roots in Jamaica in a very fuiprifing. degree, as if the Divine Being h d meant peculiarly to adapt them as neceflary correctives of thofe putrefcent humours, which a diet on animal food is apt to generate in this climate. Thus we find, that the Irifh potatoe, when tranfiplanted into this foil, acquires a fweetifh tafe, whi.h fhews its impregnation with faccharine principles; the fiweet potatoe, the native of this climate, is largely fupplied with the like impregnation; fo are the yams, eddos, cocos, moft of the different forts of pulfe, and almoft all the fruits. The plantain, when ripe, and dricd in the fun, is a perfect conferve, without the aid of any more fugar, than what is naturally contained in it; the banana is fill more lufcious, but with a flight aftringent quality, which has made it extremely remedial in fluxes; correcing the putrid humour by its antifeptic virtues, fheathing the acrimony with its balfamic oil, rendering the bowels gently foluble, and yet ftrengthening their tone by its mild aftringency. The China oranges here, when full ripe, and in a good
[u] Margraft's. Mem.

\section*{J A M A I C A.}
foil, are frequently incrufted over with a palpable integument of white fugar, concreted on their rind, and hardened by the fun. How benevolent and gracious is this ample provifion of fo wholefome and neceflary a fubftance, which is fo copioully lodged in the foil, to be imbibed, prepared, refined, and duly adapted, by all thefe vegetable productions, for the ufe, fuftentation, and health, of the inhabitants! The fugar prepared from the cane contains thefe virtues in abitract, which are found lefs copioufly diftributed to the culinary roots, and efculent fruits; it therefore prefents itfelf as a portable remedy, always at hand, to fupply the occafions of thofe perfons who are not able to procure other vegetable productions, endowed with the like properties; or to be mixed with thofe aliments, which contain too little, or none at all, of them; it feems therefore peculiarly of ufe, as a neceffary part of feafrore, for the ready fervice of thofe, who are too diftant from the land to come at frefh vegetables, and the nature of whofe flefh diet requires fuch a conftant corrector. The warrant and petty officers on board a fleet are fcarcely ever feized with acute putrid difeafes, excepting by meer infection ; and they are very feldom known to become fcorbutic in any violent degree, unlefs the general caufe (exceffive moifture) be of a remarkably long continuance. The diet of this clafs of men is, in general, the fame with the reft of the crew, but they are well clad for the moft part, and never want a little ftore of fugar.

The expence of allowing fugar, or melaffes, as a part of fea provifions, even taking it at the higheft, is too trifling, when put in competition with preferving fo valuable a part of the community as our feamen, at leaft, for all that they might have occafion for, when at fea.

The efficacy of this medicine, in preferving the health of feamen, is far from being a recent difcovery; fo early as the reign of Charles the Firft fugar had been found eminently ufeful in fcorbutic cafes, as appears by Woodall's Treatife, re-publifhed in 1639 . But Great Britain had at that time no colonies to fupply her with a fufficient quantity of it; and it is worthy remark, that the plague almoft uninterruptedly raged in London till towards the Revolution, when confiderable remittances of fugar began to arrive from Barbadoes, Nevis, Jamaica, and other iflands, belonging to Britain. This affluence rendered rendered it much [w] cheaper than ever it had been before; confequently the ufe and confumption became far more extenfive, particularly in London, than in preceding times; and the vifitations of the plague gradually became lefs frequent, till at length they ceafed intirely. Thofe medical writers, who have entertained very fanguine expectations from new roort in the cure of the fcurvy, feem neverthelefs to be of opinion, that fugar is equally efficacious; the fame reafons which lead to expect fuccefs from the one, holding good, in moft effential circumftances, in regard to the other; and their opinion is founded on this doctrine, that fuch vegetable fermentable fubftances are difcovered, by experiment, to have the power of preferving animal fluids from corruption, and of even reforing them after having undergone fome degree of putrefaction.
The hot liquor taken from the tacbe, or laft copper, in the Weft India boiling houfes, during crop, and mixed to a fufficient dilution with water, makes a moft agreeable drink, having fomewhat of the tafte of new wort, but more pleafant; of this both the Negroes and Whites in general are extremely fond, and it ought to be the principal drink of Europeans newly arrived. From this caufe it happens, that the imported Negroes, purchafed during the crop, are more likely to do well than thofe who are introduced at other times of the year; for they are freely indulged with a daily allowance of this liquor, and it is found to recover the languid and diftempered, and make them grow fat, fleek, and vigorous. In its operation it is cooling, gently moves the body, and throws any latent acrimony or putrid humour, which may be lurking in the blood and juices, upon the furface of the fkin, as many Europeans experience on drinking it; but, on perceiving boils, or cutaneous eruptions, about the lips, or other parts of the body, to follow the ufe of this beverage, they ignorantly fancy, that thefe falutary fymptoms are a real diforder, caufed by fome noxious quality in the liquor; and fome have difcontinued it

\footnotetext{
[w] When the Portuguefe fupplied England with fugar, the price of this commodity was from \(7 \%\) to \(8 l\). fterling per cwt. a moft exorbitant rate in thofe days. As the Englifh plantations increafed, they reduced the price to \(3 \%\) and \(2 \%\). \(10 \delta\).; and, fince that period, to \(2 \%\), and 1. 105. per cwt. But the merchants were obliged to bring it down as low as even to feven or eight fhillings, before they could force the Portuguefe out of the market,
}

J A M A I C A.
for this reafon, at the very time, when it has been deing fuch effential fervice, by driving out fuch foul and corrupt bumours, which, when retained in the habit, produce fevers, and other dangerous maladies. Nor are its good effects confined to the human race. It is the common practice, on the plantations in Jamaica, to feed the working horles and mules in crop-time with chopped cane-tops, and the fkimmings of the boiling-houfe liquor, which anfwer better than corn, in preferving them plump, ftrong, and healthy. Hogi, poultry, and, in fhort, all the animals belonging to a plantation, thrive on this juice. Even the dogs in this illand, although qualified by nature not only to relifh, but to digeft, putrid food, are not lefs fond of fugar. I have known a well-fed animal of this fpecies, who was commonly dieted from a plentiful table, and never tafted carrion by way of bon bouche without fuffering feverely for it ; on thefe occafions he ufed a quantity of what is called here \(\operatorname{dog}-\mathrm{grafs}\), fufficient either to make him difgorge, or compofe, his ftomach, probably, by the fixed air contained in that plant; at other times he would greedily devour the avogato pear, clammy cherry, ripe plantains, yams, bananas, \(\delta_{c}\) c.; but, when introduced to the boiling-houfe, he never failed to regale himfelf without intermiffion; and, from being in a fate of miferable leannefs, was fure to become plump, and full of life and agility.

I have feen the good effects of it on Negroes afflicted with the yaws, even after the diforder (by catching colds after a mercurial regimen) had fallen upon their joints; it threw the venom out on the furface in a plentiful eruption, and thus brought on a crifis, which no other known remedy could have produced fo defireably.

In worm diforders there is not a more powerful remedy than the juice of ripe canes, to expel thefe vermin [ \(x\) ]. The Negroe children (as if prompted by inftinct) fuck them with the utmoft avidity, and are always relieved. When powders and other vermifuge medicines are adminiftered, melafles or fyrup ufually forms a part of the compofition, and perhaps contributes more than is generally imagined to
[x] Doctor Grainger obferves, that fugar is commonly fuppofed to favour worms; that, however, he knows this, from repeated experiment, to be a rulyar error. That perhaps no one thing in the suateria thedica is more deadly to worms than caire-liguor, unlcis we except mufiorodo, mixed with an equal quantity of fwect oil, efpecially what is made by exprefion from the cocoa nut.

\section*{BOOK III. CHAP. VI.}
their fuccefs. I have known many old white perfons in this ifland, extremely fond of the refined fugar, eating it frequently in a morning, and with a fingular goitt, from a firm affurance (eftablifhed by long experience) of its mild, balfamic, and falubrious, operation.

Some (fays Brookes) are great enemies to fugar, and affirm, that it produces I know not what bad effects; but, as thofe who have ufed it very freely have never received any detriment from it, we may conclude, that it is intirely harmlefs. It does not produce confumptions, as fome pretend, becaufe an apothecary, who had that diftemper, almoft lived upon fugar of rofes, and was cured by it. Some have affirmed, that it produces the fcurvy, and was the original caufe of it; whereas it is well known, that the fcurvy appeared long before fugar was in ufe: befides, the pooreft people, who eat much lefs fugar than the rich, are moft afflicted with the fcurvy. This is likewife true of common failors, who eat more falt provifions, and lefs fugar, than their officers. Some affert, that it turns four upon the fomach, but give us no argument to prove it. An acid may indeed be extracted from fugar, and fo there may from all forts of corn, as well as wine; but then it muft be performed by art, and turned into an ardent fpirit firt, by fermentation. Befides, fugar is a natural foap, and will readily mix with any fort of liquor ; and therefore it is not probable that it Chould turn four on the ftomach \([y]\). The officinal compofitions of fugar are allowed on all hands to be good in diforders of the breaft; and, mixed with oil of fweet almonds, it is good in coughs, hoarfeneffes, and the like. Externally applied, it is a very great vulnerary, efpecially when mixed with a little brandy, whofe ftyptic quality, joined to the balfamic virtues of the fugar, makes a compofition, which will heal wounds, cleanfe ulcers, and prevent putrefaction. Doctor James concurs in the fame opinion. When duly ufed (fays he) it is not fo offenfive to the blood as is vulgarly

\footnotetext{
[y] I am apt to furpect, that the other ingredients, fuch as rancid butter, and other greafe, unfermented flour, and crude fruits, \(\varepsilon^{\circ}\). with which fugar is generally combined by paftry-cooks and confectioners, may occafion fuch effects, and deferve the whole blame, which has been wrongfully afcribed to the fugar alone, from ignorance of its principles. This probably is the only wholefome ingredient belonging to fuch compofitions, and may prevent much of the bad confequence they would otherwife produce, efpecially in the weak ftomachs and bowels of children, who are the principal fufferes.
}

\section*{J A M A I C A.}
thought. It is daily taken to a degree of excefs by fome, who, inftead of being injured by it, live in a found and perfect fate of health. It is a mild and fweet falt, which is far from being unfriendly to the mixture of the fluids, becaufe it corrects acid, bilious humours, and renders the body foluble.
Every teftimony, in fhort, agrees in pronouncing it to be one of the beft adapted prefervatives of health in cold as well as hot climates, from its nutritious, healing, and antifeptic qualities. Thofe who rejeet punch, from an opinion that lime or lemon-juice is offenfive to their bowels, which often is the cafe in gouty habits, would do well to mix fugar and fyrup with their rum and water; at the fame time being very moderate in the ufe of that firit ; they may be affured, that fuch a beverage will be far wholefomer for them than the liquor called grog, which is a mixture of rum and water only; for, although rum is far preferable to any other fimple diffilled firit, yet it may be advifeable in the Weft Indies to mix it with fome fermentative ingredient; and none is more proper than fugar or melaffes.
For the fame reafons on which the caufe of the plague's decreafe in many parts of Europe has been fuppofed, it may be juffly concluded, that putrid. and malignant fevers neither originate fo frequently, nor (when brought by infection) ravage fa extenfirely in the Weit Indies now as formerly they did. A proof of this declenfion is not only the comparative healthinefs of Jamaica, formerly deemed a fickly ifland, but the greater health of the feamen employed in this trade, who ftill drink as hard, and expofe themfelves to all extremities of the climate as much, as they did one hunded years ago. Yet the merchant thips feldoin lofe any of their crew by thefe diffempers, and moft of them lofe none. Some will attribute this to the more extenfive cultivation of the country, the cutting down its thick woods in feveral parts, and melioration of its atmofphere; but there is fuperadded to all this the much greater quantity of fugar manufactured throughout the ifland, and the greater facility which the feamen have found in getting at fupplies of it for their private ufe, whilft they wait in port the loading of their fhip, as well as during the voyage home; for, when they cannot procure it gratis, they either buy of the Negroes for a little tobacco, or other triffing confideration, or get it by theff. There is now near fixty times as nuch fugar made in the
illand, as there was an hundred years ago ; and a large quantity falls to the fhare of the Negroes, not only in what is given to them, but what they feal, which it is impoffible to prevent, as they are the conductors of it to the fhipping-place, as well as manufacturers. The fuperfluity, or what they do not referse for their own ufe, is cliefly difpofed of to the failors, and poorer Jews; the failors likewile, who come aflore to the wharfs, find many opportunities to fill their hats or pockets from the packages that lie there. Befides this, they are generally allowed fugar on their voyage home, to mix with their tipple; and, when it is denied them, they make no ceremony in purloining it; and, by this means, eftablifh a pretty regular article in the Britifh factor's account with the planter, which goes under the name of plunderage. From this caufe we do not hear of the crews of Weft India men fwept off, or indeed hardly afflifted at all with the feurvy, or thofe malignant difeafes, which fo commonly depopulate the Eaft India fhips in their paffage homewards; although fume of the former, in wet and fevere winter voyages to England, are often, by controry winds and bad weather, detained at fea for a fpace of eleven or tweive weeks, and without any difference to their crews in point of die from thofe employed in other trades, except that they have the ufe of fugar and melaffes; and rum, inftead of brandy.

Thefe facts feem to be confirmed by the confent of the ablef of the faculty, who acknowledge this change to have been actually wrought; and fome among them have thrown further light on the caufe of it, by infifting, that the very fame prefervatives, in Weft India voyages, anfwer as well againft malignant, remittent, and intermittent, fevers, as againft the fourvy. Grounding our judgement therefore on the concurrent evidence of obfervation, and the opinions of fo many learned and intelligent phyficians, who have adopted their fentiments, upon certain experience, and moft accurate enquiry, we are well fuppoited in recommending the plentiful ufe of the cane-liquor, and its preparations, to all thofe who pafs from Europe to refide in Jamaica; and may venture to affert, that it is perfectly inoffenfive in its priaci, les, and fingularly conducive to health in its effects on the human body in that climate. The Spaniards in our neighbourhood are very liberal in their ufe of fugar and honey; their fweetmeats they eat chiefly with wheat brend, which they referve for thefe and chocolate only. The
\[
4 \mathrm{~B} 2 \quad \text { honey }
\]
honey they fpread on caffava cakes; the affinity between thefe two fweet fubitances need not be infifted on.

That malignant and terrible difeafe, called the black vomit, was unknown at Carthagena (as it is faid) till about the year 1729 . It was fufpected to have been firft brought thither from Porto Bello. It made its appearance in that year on board the guarda coftas and galleons lying in the harbour, and deftroyed almolt the whole of their crews. The Spanifh phyficians attributed it to the falt meat on which the feamen were fed, as it was obferved to rage more among them, than thofe who had been able to live on more wholefome food; they confidered falt meat as tending to bring on this diftemper, and that the humours it generated, together with the labour and hardfhips of duty, inclined the blood to putrefaction; but it is certain, that the failors alone were not its only victims; for even paffengers, who had not tafted any falt meat during the voyage, felt is effects; it was therefore, with more appearance of truth, imputed to the peftilential air of Porto Bello. It is remarkable, however, that the natives of Cartbagena, and thofe who had lived there fome time, were not, nor ever are, affected by it ; but enjoy an uninterrupted health, amidft the dreadful bavock it makes among others; it feems rational to fuppofe, that this diforder has its fourcce at firft in a high degree of the fcurvy, which, from the baleful influence of the fwampy effuvia at Porto Bello, degenerates into a putrid fever of the worft fpecies. This is confonant to the idea of our Englih writers on the fubject, who affert, that fuch as have any fcorbutic fymptoms are in porportion more fubject to the dyfentery, and malignant putrid fevers; and likewife are the moft feverely handled by thefe diftempers. A proof of this theory, was: the memorable deftruction of the feamen belonging to admiral Hofier's fquadron, at the Baffimentos, which began with the fcurvy, and was compleated by a malignant putrid fever, and dyfentery, contracted from the fatal air of that place. The diet of the native Spaniards, and others, who naturally fall into their cuftoms at Carthagena, preferves them free from any forbutic acrimony, or difpofition in their humours to breed or admit the entrance of putrid difeafes. The fame good confequence would probably enfue at Kingfon in famaica, if the inhabitants of that town would adopt a diet, and regimen of life, fimilar to thofe of the Spaniards at Carthagena. For although this difeafe
difeare has made but little ravage, at any of our Jamaica fea ports, of late years, in comparifon with anterior times, which is to be afcribed to the greater abundance of vegetable food, fugar, and fruits, in common ufe; it feems likely, that the inhabitants would be equally proof againt its attacks, as the Spaniards are found to be, if they would but depart a little more from a too plentiful flefh diet, and ftrong liquors, and regale more frequently on chocolate, and fugared preparations; ufe none but rum of due age, with the fubacid fruits, not green, but thoroughly ripened; with fuch other materials, in their ordinary refrefhments, as, by the confent of experience, and medical precepts, appear beft calculated to refift the venom of this, and fuch like putrid diftempers. That Cartbagena is not a very unhealthful climate (though in a low fituation, and intenfely hot), is manifeft from the good old age which feveral of its inhabitants attain, many of whom enjoy fo confirmed a fate of health, as to reach their 8oth year. This, indeed, is not an extraordinary thing in Jamaica, which is much cooler, and where there are now, and have at all times been, feveral perfons exceeding that period; but, in order to make this longevity a more univerfal bleffing, thofe means and habits of life muft be practifed, and refolutely attended to, which are found to be the moft conducive and favourable to the end propofed. I fhall next confider, as another ingredient in the common diet of perfons in the Weft lindes, the article of

\section*{\(R \quad \mathrm{M}\). \\ S E C T. V.}

I do not know of any author, who has treated this fubject iis a manner fo fcientific and elaborate, as the ingenious Mr. Doffie; as his pofitions, relative to the analyfis and properties of this firit, have not been controverted, and appear to be the refult of experiments, joined to an eminent degree of chemical knowledge, I thall readily adopt, and endeavour to illuffrate their truth, by other obfervations. From thefe, a judgement may be formed, why rum in fome circumftances is to be confidered an un wholefome article of diet; why under others it is quite the reverfe, when ufed in moderation; why it is to be preferred to other fimple-diftilled fpirits, whether it be drank in moderation or to an excefs; and hence will appear the means moft certain,
to difarm it of noxious qualities, and adapt it with greateft fafety to common ufe.
I. Ardent fpirits, in their pure fate (i,e.e not dulcified by union with fome corrective), have a violent aftringent action upon the folid parts of animals, coagulate the fluids, and diminifh the power of the nervous fyftem.

From thefe caufes they produce fuitable effects:
A tabidnefs, or wafting of the extremities,
A nervous weaknefs, or tendency to palfy,
Deftroy the appetite and fecretions,
Render the liver fchirrous, and occafion dropfies.
On diffecting the bodies of perfons, who have died of exceffive dramdrinking, the whole liver has been found converted into a fchirrus of peculiar hardnefs, 60 as to be altogether incapable of its office, of \(\int e\) creting the bile; and the mefentery fometimes aftonifhingly enlarged and tumefied.
§ To this may alfo be added, Doctor Macbride's pofition, that fuch firits contain little or no air per fe; and that they prevent the ready extrication of it from alimentary fubaftnces during the digeffive procefs. From all which caufes it is evident, that perfons, who indulge in fuch drink, generate nothing but crudities in the fomach: and are fubject to dyfenteries, wafting of the flefh for want of nourifhment, all forts of nervous diforders by the continual irritation of acrid matter, and to dangerous fevers; from the want of that aërial principle, which is neceflary to ferment and prepare the aliment for concoction. Rum is therefore leaft wholefome, when it comes neareft to fuch pure ardent fpirit in its properties; and hence, new or frefh diftilled rum, which is in this predicament, appears to be in its moft unwholefome fate.
2. The fubftances, which, by uniting with pure ardent fpirit, counteract its noxious qualities, are, volatile oils, generated either in the fermentation or diftillation; and acids, either fuch as were natives in the particular vegetable matter which was the fubject of fermentation, or fuch as are generated in the courfe of the fermentation.
3. Thefe corrective fubftances are, in part, combined with the fpirit before diftillation, and rife united with it ; and, in part, uncombined

\section*{BOOK III. CHAP. VI.}
with it before the diftillation, but, rifing with it then, unite themfelves gradually with it afterwards.
4. It is from the latter union, which takes place after the difillation, that rum is fo much improved by time, and efpecially in a calk. Where a large quantity of it is kept together, the inteftine motion being greater, and at greater liberty to act, than in a fmall confined fpace, the particles are more fpeedily brought within the fphereof each other's attraction, and the union more quickly compleated. Hence, when kept in bottles, a very great length of time is required to perfect it ; but when kept in cafks, the fpirit becomes gradually milder, and lofes that violent aftringency, which manifefted itfelf before this change, in a fiery fenfation in the mouth and throat of thofe who have drunk. it.
§ I have tafted rum in Jamaica, which had been bottled \(j 0\) years, but ftill retained this pungent, fiery quality, and a moft difagreeable twang; which fhewed, that the oil was not thoroughly united with the fpirit. But, when it is kept in a calk. fix or eight, to twelve months time, is generally fufficient to perfeet it; thofe planters who keep their ftock rum in large butts, which hold three or four hundred gallons, find this union perfected in a fill fhorter time; and the rum fo packed is of a far fuperior quality to what is ftowed in fmall calks.

I am apt to fufpect, that there is likewife, in all frefh diftilled rum, a certain etherial volatile fpirit, of a very cauftic and pernicious quality, which evaporates by keeping for fome time in cafks, but cannot entirely efcape when fuch frefh rum is put into bottles well ftopped, and laid on their fides.

It fhould be the practice, on all the plantations in this inland, to lay up one or more puncheons of rum every year, that they might fupply their white men with what is of due age, inftead of poifoning them with that fiery, unwholefome fpirit, juft drawn from the fill. A neglect of this humane đconomy, either through a pitiful avarice, or a brutal indifference, has deftroyed many hundreds. The like. caution may be offered, in refpect to the foldiers and feamen on this ftation. The way to have it wholefome, and potable, is to lay up, in large tight buts, a fufficient fock to ferve two years; the one-half new, the other at leaft a year old; by this method, there would be a con-

\section*{J A M A I C A.}
ftant fupply of good firits; and whatever fuperfluity might remain, upon leaving the ifland, would certainly produce much more than the prime coft, whether it Chould be difpofed of at that market, or brought to Great Britain.
5. Where an acid abounds, the firit gains by time, in confequence of this dulcification, a grateful flavour and odour.

Where volutile oil abounds, the feeming ranknefs of finell and tafte gradually goes off, or is converted into a fpecies of perfume.
6. The wholefomenefs is alfo improved by time, as it caufes a privation of thofe ill qualities, which render the frefh diftilled fpirits fo noxious.
7. The melaffes fpirit, diftilled in Britain and North America, is fo defective in the volatile oil, which is the great corrective, and gives the characteriftic to rum, that it is moft palpably different from it in tafte and flavour, as well as in its moft falubrious qualities.
§ For this reafon the North American fpirit is better than the Britifh; the former being made from the firft-drawn melaffes, which generally contains a portion of fugar, and a large fhare of this oil. The French melaffes indeed is impoverifhed very much, by their boiling it over again, to make their paneel fugars; but in Jamaica this piece of æconomy not being practifed, the melaffes fold here to the North Americans is twice as rich as what they purchafe at the French iflands; and their diftillers probably find it fo in the yielding.

In Britain the melaffes is proportionably jejune, and deprived of its richnefs; as the mufcovado fugars, by the time they fall into the baker's hands, have been pretty well drained; fo that what is drawn in the refining procefs, and afterwards fold to the diftillers, muft be very much impoverifhed.

Some diftillers buy up the dark uncured fugars, which yield a fpirit of better quality; but it is impoffible for them to produce the fame firit as Jamaica rum, where the liquor for diftillation is compounded of various mixtures, not to be obtained by the Britih ditiller.

This liquor, for example, confifts of
I-part fkimmings,
I-part walhings,
1-part cool lees.

To thefe variounly compounded, according to the particular judgement of the manufacturer, and other circumftances, the melaffes is added during their fermentation in the cifterns, and in the proportion of about fix gallons of melaffes to every hundred gallons of liquor.

Sometimes it is made wholly of crude cane-liquor and melaffes, run into fermentation together.

So that not only the ingredients are various and differently compounded; but the melaffes, which is the principal or only fubfance ufed in Britain and North-America, bears in Jamaica but a very fmall proportion to the other ingredients, being only as 6 to 100 , or thereabouts.
8. The fpirit, when meliorated by union with thefe corrective fubftances, and by age, is reduced to a mild and gentle ftate; and, when taken in moderation, is not only fafe and wholefome, but even in fome cafes falutary and medicinal.

Its aftringency, when duly reftrained, renders it invigorating and cordial ; and its power of checking the animal ferments, renders it opponent to a putrid difpofition. In hot countries, therefore, it prevents that extreme relaxation which is generally fo incommodious and debilitating ; and, by its antifeptic power, that tendency to a putrid habit, which induces the moft fatal difeafes.
§ The effential points, to make it become medicinal and wholefome, are then, ift, the keeping it to a due age; 2dly, the ufing it in moderate quantity. The ufe of it in the Weft-Indies, under thefe precautions, is fo far from being injurious, that it adapts the body to fuftain the heat of the climate with lefs inconvenience, and checks the humours from running into putrefency. This feems confirmed by obfervation, and the cuftomary practice of the inhabitants in hot climates.

Among the Spaniards at Carthagena, the ufe of fpirits is fo common that the moft regular and fober perfons never omit drinking a fmall glafs every forenoon about eleven o'clock, alledging that it ftrengthens the ftomach, weakened by copious, conftant perfpiration, and Charpens the appetite. Hacer las once, To do the eleven; that is, to drink a glafs of fpirit, is the ordinary invitation. But this cuftom, which is not efteemed pernicious when ufed with moderation, Vol. II.

4 C has

\section*{J A M A I C A.}
has degenerated into vice; many being fo fond of it, that they do nothing the whole day but Hacer las once. Perfons of diftination ufe Spanifh brandy, but the lower fort a kind of rum diftilled from the fugar-cane.
Jobfon remarks, that the common people in Guiney eat only once a day, which is after fun-fet. They hold, that eating feldom, and in the cooler part of the day, is a good prefervative of health. He adds, that the natural moifture being drawn outwards to refrefh the external parts when parched by the fun's heat, the ftomach is then cold, and fitter to receive a dram than to digeft folid food; in proof of which opinion, he afferts to have found by experience, that he and his men could drink as much brandy in the middle of the day, at a time, as in England would bave burnt out their very hearts; that is his expreffion.
The fweating, which happens in confequence of overmuch relaxation in fome hot climates, feems to be of the colliquative kind, refembling that which accompanies putrid diftempers in their advanced flage, when there is an utter proftration of frength, and when the blood is haftening into a total difiolution; a moderate dram of fome fpirituous liquor, at fuch times, operates by its bracing or aftringent quality, and fuppreffes the immoderate flow of perfpiration; hence thofe perfons who drink this liquor moderately, when they are almoft overcome with the debilitation of heat and moifture, perceive a fenfation of coolnefs, and ceafe to fweat fo profufely. But the wholefomer way of ufing it would probably be with a due mixture of water, like the reapers of Pennfylvania, mentioned by Mr. Franklin. In this way likewife admiral Vernon, when he was at Jamaica, caufed the crews of his fquadron to be ferved, and it caufed a wonderful change in their health; for with this caution they became lefs fubject to bad fevers; and were able to go through the fatigues of their duty without inconvenience.
The moft wholefome proportion of rum to water, in this climate, is as 1 to 16 , or half a pint of rum to a gallon of water, and the allowance to foldiers, feamen, and white fervants, fhould rarely or ever exceed it, for their ordinary beverage; the price of half a pint of rum is feldom above \(1 \frac{1}{4} d\). Jamaica currency, or \(1 \frac{1}{4} d\). fterling; the navy allowance of beer is one gallon to each common

BOOK III. CHAP. VI.
feaman per diem, the price of which cannot be rated lower than \(3 d\). whence it appears, that, without any extra charge to government, the feamen on this fationmight be fupplied with a daily allowance of fugar or melaffes, viz. a pint of melaffes, or half a pound weight of mufcovado fugar, the coft of either of which would not exceed one penny fterling, and in general it would be found to fall fhort of the expence of beer, about \(\frac{3}{4} d\) ferling per gallon, and conduce infinitely better to keep the men in good health.

The liquor called grog, or a mixture of rum and water, is often rendered noxious by putting in an over-proportion of rum. For although the drinkers of it fet out at firft with a moderate quantity of the fpirit; yet, as by habit it grows more and more taftelefs, they are induced gradually to add a little and a little more, till they bring their mixture to equal parts of half rum, half water, and fometimes three parts fpirit to one of water, for their common dilution at meals, and in the heat of the day. I have known feveral perfons deftroy themfelves in this manner, who at firft were extremely fober and temperate; but it was a work of fome time hefore they arrived at that degree of excefs which was neceflary to bring on a droply, or other bad habit of body. Without a large proportion of water, or the correction of a fubacid, as the juices of fruits, melaffes, fugar, cremor Tartari, tamarinds, and the like, it promotes, inftead of allaying, thirft and every draught, that is fwallowed, ferves but to provoke the fwallowing another, till the faculties are ftupified.

After being heated in this climate with exercife in the fun, I know not a more excellent remedy than a bafon of warm green tea, fweetened with fugar or fyrup, with the addition of a fpoonful of found old rum. This prefently reftores the perfpiration, takes off the fenfation of fatigue, and is cooling and refrefhing. But cold liquors, as punch, \(\mathcal{E}\). drank at fuch a time, are apt to fupprefs the perfpiration, increafe beat, and bring on violent pains in the head, and fometimes a fever.
9. The faccharine matter fermented in order to the making rum, produces in hot climates a copious quantity of volatile oil, which unites with the fpirit during fermentation.

Part of this oil then combines with the fpirit, and comes over in the courfe of diftillation united with it.
\[
4 \mathrm{C}_{2}
\]

The

The other part rifes uncombined, but unites by Now degrees afterwards. A proportion of volatile oil is likewife produced in the procefs of diftillation, by the action of the fire upon that faccharine matter in the diftilling liquor, which has continued unchanged by fermentation, and adheres to the fill, in form of wobat is generally called dunder.
10. The volatile oil, which comes over uncombined, imparts to frefh diftilled rum that ranknefs of fmell and tafte, which are almoft always found in it. And the aftringent quality of the pure fpirit, as yet not united in due proportion with this oil, caufes that fiery pungency, which it remarkably poffeffes at that time.
II. But the union being afterwards perfected and matured, by due age, the rank tafte, fmell, and acrid pungency, are then converted into fuch as are grateful. The aftringent and coagulating powers of the fpirit, of courfe, are materially corrected, infomuch that they ceafe to be detrimental to thofe perfons who drink it in fit moderation.
12. This dulcification is verified by an eafy experiment. A piece of raw flefh being fteeped in brandy, another in rum, it is found, that the plumpnefs and foftnefs of the flefh is much longer retained under the action of rum, than under that of brandy. Although braindy will harden it ftill lefs than rectified firit of wine, or alcohol.
13. Brandy is united with fome portion of acid, but no volatile 9il. It comes therefore nearer to pure ardent fpirit, has not its noxious qualitics corrected, and confequently is very inferior to rum in falubrity.
14. There are inflances where the fref diftilled rum has all the fenfible good qualities that, in general, are only to be gained by the improvement of time and long keeping. This peculiarity has its caufe in the volatile oil being of fuch a nature, that the whole of it unites immediately with the fpirit in the proceffes of fermentation and diftillation, and thus renders the rum perfect at the firt.
§ This muft be underftood only in a certain degree. For the beft fpirit that can be made, when firft drawn, is not without that fiery, pungent, acrid tafte before defrribed, though it becomes divefted of it in a much horter time.
15. This
15. This materially depends on the right management of the diftilling procefs, taking care never to draw off the fpirit or runnings too low; for whenever this happens, the concreted matter at the bottom of the fill will be apt to burn, and an empyreumatic oil comes over, which requires great length of time to make it unite with the fpirit, and fometimes it cannot be cured of this depravity by the longeft keeping.
§ The beft method for preventing fuch an effect will be, to keep up an equal, and not tos violent, fire, and to draw off the runnings for marketable ufe not a moinent longer than while they continue perfectly limpid, colourlefs, or clear from any whitifh cloud or tinge; a fmall quantity of which is fufficient to foil the flavour of a whole puncheon of the fpirit.
§ This milky tinge is the fure criterion, to fhew that a burnt or naufeous empyreumatic oil is rifing, and that the rum is what is commonly called fill-burnt. It afcends commonly towards the end of the operation. Some planters draw the runnings too long, from a miftaken thrift of making the moft they can, and thus perhaps depreciate the whole of their diftillation. What firf comes over is always the beft, and, when diluted to the ftandard proof with pure fpring water, it makes the fineft rum. In Jamaica, they generally mix the whole of the firft runnings together, and diftil or rectify them over again, referving alfo the low wines, or latter runnings, for the fame purpofe.
16. This empyreumatic oil is apt to difagree with fome flomachs, and caufe the heart-burn. But the effect is rather an inconvenience than any injury. It only gives rite to an unpleafing fenfation, but does no real prejudice to the health.
17. No fpirituous liquor digefts more kindly, or affifts digeftion more efficaciounly, than good rum, fufficiently diluted with water, and drank in proper quantity. The ufe of it has even been found effectual in fome chronical cates of bad digention, where all other means of relief have failed.

The comparative effects of rum and brandy on the health have been noted at fea, where they are particularly difinguinable; when it has happened, that, in failure of being able to procure the former,

\section*{566}

\section*{J A M A I C A.}
the latter has been fubftituted. The decline of health that has followed has been exceedingly confpicuous on this change, from the ule of rum to that of brandy; numbers of feamen contrating diforders they were free from before.
§ Mr. Kalin mentions, that, in the North-American provinces, rum is efteemed much wholefomer than brandy; and he was told by Major Rutherforth, that, being upon the Canada expedition, he had obferved that fuch of his men as drank brandy for fome time, died of it; but thofe who drank rum were not hurt, though they got drunk with it every day, and oftener than the others.

The caufe of this great difference is obvious from the foregoing remarks.
19. It is proper however that this fpirit Mould always be drunk in moderation. Whatever quantity infringes on fobriety, and brings on any diforder, ought to be diminifhed. It is always proper likewife, that in the daily conftant ufe of this fpirit, it thould be diluted with water or other fmall liquor, which will render it more mild and inoffenfive in its action on the fomach, and organs of fecretion.

The too copious ufe of thofe very aftringent acids, the juice of limes and lemons along with fpirits, has greatly promoted the in. jury done to the health of thofe who have drunk them to excefs, and in moft habits they are apt to do mifchief. But the juice of oranges, and milder fruits, taken with fuch fpirits, is lefs noxious. Lemons and limes ought always to be admitted fparingly and with the greatert caution.
§ It is a very wrong and injudicious cuftom in Jamaica, in taverns as well as private houfes, to ufe green limes in making punch; for lemons or Seville oranges are feldom made ufe of. The juice of green limes is of a very corrofive nature; and hence its efficacy in cleanfing foul ulcers. There is ftrong reafon to believe, that this moft noxious ingredient is often productive of cramps and other fpafmodic complaints; and that its bad effects would be more feverely felt, if it were not that they are in fome meafure corrected by the fugar which makes a part of the compofition. The acid of this unripe fruit is fo tharp, that it excoriates the inteftines, and caufes

\section*{B O OK III. CHAP. VJ.} caufes bloody ftools, if fwallowed without any corrector [y]. But when they are ripe, their juice, having been thoroughly concocted by the fun, becomes mild and inoffenfive, if ufed with a due proportion of fugar ; and experience fhews, that all fruit may be more fafely eaten, the more fugar it contains.

The fafer way is, to fubstitute the Seville orange, which grows wild in every part of this inland, and might eafily be propagated in fufficient quantity on every plantation, or in the neighbourhood of the towns, for fupplying the inhabitants.

It is a queftion whether the addition, of the carhoo fruit, which poffeffes an highly ftyptic acid, be proper in punch? It communicates a pleafant flavour, and perhaps the roafting before it is ufed for this purpofe may abate much of its aftringency, which is fo great in the crude fruit, that it has often performed a cure in dropfical complaints, occafioned by the immoderate ufe of fpirituous liquors; I fhall not therefore haftily condemn, what may poffibly operate as an antidote in fome degree to the bad effects of thofe fpirits.

It was a long time a vulgar prejudice, that the diforder called the belly-ache was caufed by drinking rum mixed with dark uncleanfed fugar in punch. But it is morally certain that this was an erroneous opinion, and that the juice of unripe fruit, which was fuppofed the moft harmlefs ingredient, was in fact the primary caufe of this mifchievous confequence in many cafes [z].
[y] If a fowl juft killed, or a piece of butchers meat juff flaughtered, is ffeeped before it is put on the fpit, in the juice of unripe limes for fome little time, or if the juice of three or four is fqueezed into the water wherein fuch flefh is intended to be boiled, it will become fo foftened as to be thorougly dreffed in an hour's time. The Negroe cooks, who are to drefs what is called here a furprized fowl, or one which is required to be roafted or boiled with great expedition immediately after it is killed and plucked, pour lime- juice down the throat, and at the vent, to make the flefh tender and eatable. The fame effect is caufed by the juice of the unripe papaw fruit, which is known to be highly cauftic. An eminent phylician for this reafon advifed, that the limes wed for making punch fhould be fliced thin, and bjiling water poured on then, to extra foucilage out of the feeds, which may prevent the acid from fhutting up the neck of the gall-bladder: and he affirmed that it might be drunk with much more fecurity by being fo blended.
\([z]\) Dr. Cheyne declares it the fole caufe. "In the Weft-Inuiles (fays he) where, from the neo " ceffity of drinking much, and from the rwant of proper ligwors, they are forced to drink much punco. "t though lemons and oranges be in their full perfection, they are zuiverfally afflicted with nervous "t and mortal dry belly-aches, palfies, cramps, and convulfions, which cut them off in of fou digys. "entirely owing to this poijonous mixture." The doctor was fadly miftaken in thefe pofitionia, and fo he was told by a cotemporary writer. "It the Weit-Indians are zuiveryally aftlicted with 4. thefe diforders, and ase cut off in a fow days, how can any inhabitants remain alive? But if

This diforder is a fpafmodic affection of the bowels, which may proceed from the irritation of fuch a corroding acid, or from a fudden repulfe of the perfiration after the body has been violently heated
" the puncl-dinkers alone are meant, the doctor has been mifinformed; for the people in the "Weit-Indies have plenty of wines from all the countries producing that commodity, and ale " and cyder from Eng:and, and are under no neceffity of drinking punch for want of other liquors.
"They make Madeira wine and water ferve the common purpoles of dinking, as we co frall
" beer in England; nor is it to to be fuppofed that an opulent peovic, whofe commerce obliges
" them to have dealings with almoft every country in Europe, would want any conveniency that
"Europe can attord; nor can we imagine, without infulting the good femfe of thefe people, that
" they would indulye themfelves in a liquor fo poifonous and deftruative to them, as the doctor
"defcribes punch to be, when they have fo great a variety of other liquors that anfiver all the
" ends of drinking. The dry belly-ache, which is fo peculiar to that part of the world, attacks
" the women as well as the men; yet the women there are particularly remarkable for their
"temperance, and abtinence from frong liquors; and many of both fexes, who never tatied
" punch, or indulged in any ftrong liquor in their lives, are aflicted with this diftemper. Nor
" is it true that it is mortal; going to a colder climate never fails to produce a cure, without
" taking any other remedy; and this difeafe is fo far from cutting them off in a ferr days, that
" they who live foberly, when they are fo afflicted, generally recover in a very little time; and it
" will hold thofe who continue the exceffive ufe of itrong liquors many months, and even years,
" before they are either killed by it, or cured of it." The latt point is in regard to the fruit, lemons and oranges, which, the color fays, are found in the utmoft perfection in thofe places; and of courfe he fuppofed, they were ufed only in that ftate: but herein he was greatly miftaken again; for whatever mifchievous effects thefe fruits have produced, have been owing entirely, either to the eating too large a quantity of them at a time, or to the ufe of fuch as were not half ripe, and confequently not in that fate of perfection which he has fuppofed. Dr. Traphan, in remarking on this diforder, ingenioully obferves, that the Eaft-Indians, though living under much the fame temperament of climate, are not afflicted with it; which exemption he afcribes to their conftant ufe of baths and unctions; by which the cutaneous pores are kept open for a free difcharge of the perfiniable matter, and the origin of thefe fpafins thus fet loofe, inftead of being locked up. And upon this principle he ftrongly recommends the uie of warm and refrefhing baths, fiweetened with orange-flowers and the aromatic leaves of the country; more particularly after a journey, or other hard exercife; to which may alfo be joined dry-rubbing with flannel or a coarfe towel. This advice is ftrongly fupported by an obfervation which every one here muff have made, viz, that the Negroes, and the white natives, who bathe every day, are rarely or ever ubject to this diforder ; and that warm bathing has generally procured relief and eafe to patients 1 abouring under it, when other remedies have failed. Trapham mentions a fpecific for it, which had been proved eflicacious by a vait number of trials; this is a fpecies of tithynalus, Br. p. 234 . called by Pifo, Cajacia, p. 102. finahe-weed, or creeping-hairy-fpurge. It is a fmall, creeping, milky plant; its leaves not unlike thofe of mint, but longer and narrower, of a dark-green colour its falk inclining to a reddifhnefs, with finall fibres or hairy radicles; between its leaf, at the joints of the flaik, the flowers come out in fmall bunches, and of a green colour. It is common in all the dry favanuahs of Jamaica.
A drachm of the dried herb is given powdered in any convenient liquir, and repeated once is three or four hours till the ufual fymptors abate; or it may be made into a fyrup, and given from one ounce to three, pro re natá; likewife in decuctions and clyfters. He recommends it alfo to be infufed or boiled in the medicated baths prepared for cafes of this nature.
with motion or hard drinking, by which fome acrimonious humour is lodged upon them. Sailors who tope half rum, half water, till they are fweating at every pore, and tumble almoft naked on the open deck, or in a ftreet, and there fleep, expofed to the damps of the night air and dew; or white fervants on plantations, who follow the like fottifh practice; or others who are obliged to travel in the night, and after riding hard till a fweat is excited, come on a fudden to a fleep hill, or a river, which conftrains them to walk their horfes a gentle pace; or thofe who are chilled by a fudden rain; or who are too carelefs a fter violent dancing; all thefe perfons are liable to be afflicted with fuch a fpafmodic diforder. Hence it appears, that it may proceed from a variety of caufes, and affect even the moft fober and temperate perfons, as is well known it does in Jamaica; and the oleum ricini, or nut-oil, which is ufed with fo much fuccefs in giving relief to thofe afflicted with it, owes perhaps its efficacy to the opening, foothing, lubricating nature of its operation, by which it fweeps away the acrid matter that was perpetually ftimulating, fupplies the want of mucus, to the abraded parts, and recompofes the nerves, in confequence of which the fpafm or convulfion ceafes.

Let me now juft recapitulate, for it cannot be repeated too often, the deftructive effects of fpirituous liquors immoderately ufed; for rum, though lefs pernicious than any other, is not lefs noxious in the end, when drank in excefs for any confiderable time.

When drank in this manner, they render the fibres of the body too rigid and tenfe. They communicate an acrimony to the animal fluids, and, not mingling freely with them, thicken, coagulate, and obftruct their circulation, efpecially in the fmaller vefiels. They caufe the liver and mefenteric glands to become fchirrhous, render the bile tenacious and vifcid, deftroy the appetite, hinder the excretion of the urine, and produce difeafes that terminate in untimely death [a]. The dropfy was formerly fo common in Jamaica,
[a] Their corrofive action on the fromach and bowels may be inagined, from the effects oblerved on the hogs in Germany fed with the difililers waht; their guts are fo rotted, that the inhabitants cannot make hogs-puddings with them. To the fame caufe it is owing, that the flefh of fuch hogs becomes fo tender that it will not keep by falting.
It is a known obfervation of expert dealers in hair for wigs, that they can diftinguifh the dramdrinkers hair by the touch, finding it dry, harlh, dead-ended, and unfit for ufe : and in the fame Vol. II.

\section*{J A M A I C A.}
maica, that it went by the name of the country difeafe; it drew its origin from the practice of inebriating with raw rum, which in thofe days was almoft the only fpirituous liquor the inhabitants were able to procure. It is now grown uncommon; the inhabitants are not only more temperate, but provide themfelves with Madeira wine, and a variety of other vinous liquors; drink lefs rum, and more diluted; perhaps too they are much improved in the art of diftillation, and have produced fome amendment in point of quality.

One of the beft of all drinks for this climate is good water, mixed with a moderate quantity of found wine, as I have had before occafion to remark; but as fome cautions are neceffary to direct the choice of fuch water as is beft accommodated to health and digeftion; or to inftruct the means of purifying and correcting it, when impregnated with noxious mineral or other particles; I fhall confider them in a feparate fection.

\section*{WATER.}
manner it is that it fpoils the fromach and bowels, the liver and lungs, and the whole body, of thofe unhappy perfons. Their fomachs are contracted into half the common natural fize, and hardened like leather that has been held to the fire; the confequence of which is a lofs of appetite, and a wafting confumption.

The rage of mankind is fuch for thefe liquors, that it is almort dangerous to fay any thing in their behalf, left it fhould be miftaken for an encouragement to perfevere; and indeed it avails but little to preach up moderation in the ufe of them, to thofe who will fet no bounds to their fottifh habits from any fenfe of their ill confequence to health; fuch beafts mult be reftrained by meer force and authority, and debarred from the means of procuring fo much as may do them injury, for they cannot or will not judge for themfelves within the line of common prudence.

It appeared from admiral Knowles's orders, when he commanded a fleet at Boffon, that his men got drunk with New-England rum at the rate of a thoujand in a day; and that 1400 New-England men were killed by it in two months; and in New Jerfey, where it is fold very cheap, the people are fo attached to i, that in harveft-time they make it their bargain to have every man a pint a day, befides wages.
Thofe commanders therefore cannot be too much applauded, who have the prudence and humanity to oblige their men to drink fpirits largely diluted with water; which, as \(I\) have before taken notice, was practifed with the happieft effect by admiral Vernon. Captain Ellis attributed to the fame wife precaution, the uncommon fuccefs he had in bringing home, in the years 1753 and 1755 , all his white men, which were thirty-four, and thirty-fix in health, from a Guiney voyage of fifteen months. Hales on Ventilators.
The fame precaution thould be ufed by the commanders of the regular troops, and the overfeers of plantations in Jamaica. Nothing can more plainly evince the fatal effects of thefe exceffes, than the general appearance and untimely end of moit of the white men and Negroes employed in the diftilling-houfes, who, as they can fupply themfelves freely and without reftraint, fo they fwill immoderate quantities of freh diftilled rum, piping hot from the worm; for they cannat

```

Water, in its natural ftate, is no where to be found entirely fimple and pure; but it is generally treated of by authors, under two heads, common, and mineral. Common water admits of all thofe various impregnations, which are not obvious to the fmell or tafte, and have no fenfible action on the human body. The impregnations in mineral waters will affect the body, and health, according to the properties of the fubftances diffolved, or contained in them; and in proportion as the quantity of fuch heterogeneous particles be greater or lefs. But it is to be obferved, that this definition is not compleatly fatisfactory: there is a middle clafs of water, which is uncompounded with any mineral or foffile fubftance, and yet may contain particles imperceptible to the eye or tafte, different from what are ufually found in common water. It may, for example, contain the fubtile ova, or exuvic, of various infects, or a volatile gas, fo well procure any better. They are bloated, pallid, emaciated, without appecite, and generally die of dropfies or confumptions.
The overfeer fhould never deliver an allowance of rum to the white fervants to ufe at their pleafure, unlefs he can rely on their difcretion and fobriety ; it ought to be ferved to them every day ready mixed with water; at leaft this might be the conflant fure penalty of their being ever found inebriated.

The beft way of leaving off a habit of dram-drinking is, by degres to mix water with the drams; to leffen the quantity of fpirit every day, and keep to the faine, or an encreafed quantity of water, till, in about the courfe of a week, no fpirit, or but very little, is ufed.
By this means the party will fuffer no inconvenience, hut reap great benefit, as has been experienced by many.

If any gnawing is left in the foomach, a little warm broth is a good remedy.
The appetite always increafes after leaving off this cuftom of fwilling raw fpirit, unlefs by too long a continuance the tone of the flomach is defitroyed.
In this melacholy flate,
Take One ounce of elixir proprietatis.
Three drachms of elixir of vitriul.
One drachno of Minficht's elixir of fteel: mix together.
A teafpoonful of this mixture in a fmall wine-glafs of white-vine, or a cup of carduus or chamomile tea, every morning and evening taken fafting, is recommended for the benefit of thofe who have wifdom or refolution enough left to defint from a pernicious Ewcefs in thefe liquors, which cannot be long perfited in, without the greateft mifchief to health ; for fuch perfons only it is meant; and not for thofe infatuated wretches, who are blind to felf-prefervation, and wilfully rufh into their grave.
- Hales,
\(4 \mathrm{D}_{2}\)
injurious

\section*{J A M A I C A.}
injurious to health. It is of confequence therefore, to have fome criteria, whereby to diftinguifh any noxious qualities contained in water, that fuch may be chofen as is beft adapted to preferve health. Philofophy and experiment have inftructed us in the means of making the difcovery, in moft refpects ; and likewife have pointed out thofe waters, which deferve a preference before others, for their lightnefs and falubrity.
Of all waters the atmofpherical, or rain water, is the mof light and fimple; yet even this is found to contain fome impregnations, difcoverable by a chemical procefs. Next to this, is fpring water; which varies in purity and gooduefs, according to the nature of the foil through which it percolates; what rifes amidft a rocky, gravelly, or chalky fratum, is generally moft efteemed. The water of wells, if fed by a fubterraneous current, comes next in order; and improves, by fanding for fome time expofed to the air before it is drank. River water is not much to be recommended, unlefs fome previous cautions are ufed in depurating, and preparing it for ufe; but of all waters, fuch as is ftagnant, found in lakes, ponds, or ditches, is the very wort. I fhall now apply thefe diftinctions more particularly to Jamaica. The rain water here is experienced to be extremely light, pure, and wholefome, collected in thofe mountainous places where no fprings are at hand; provided it is carried in clean gutters, into fome refervoir, or fhaded place, which is not expofed to the fun at any time, nor open to infects for depofiting their eggs. When I was at St. John's Town in Antigua, fome years ago, I obferved moft of the houfes were provided with cifterns, for receiving the rain water which fell on the roofs; this water, from the multitude of mulkeetos which bred in it, the lizards, cockroaches, and other animals, that had fallen in, and the dirt wafhed down from the houfe tops, was feculent, and almoft putrid. Such water, even boiling can fcarcely accommodate to health. The water of many of the rivers in Jamaica is turbid, from the frequent heavy fhowers that fall in the uplands, and flood them; in geveral therefore, their water ought to be kept for fome days, until the clayey and other impure particles are entirely fiblided, or that it is otherwife purified. The water of lagoons is
fo fetid, that the fenfes will fufficiently caution againft the admitting. any of it into the ftomach.

The moft common impregnations in the Jamaica waters are,
On the South fide - a foffile muriatic falt, terrene particles, and particularly lime-Atone.

On the North fide - Terrene, argillaccous, ftalactite matter, and chalk.

There are likewife, of the mineral clafs, fuch as are known to be impregnated with iron and fulphur; and others, that are fufpected to contain copper, lead, or allum.
1. Brackish, or Water impregnated with a Muriatic Salt,

Is difcovered, by letting fall two or three drops of folution of filver (in aqua fortis) into a glafs of it; when, if there is ever fo fmall a quantity of that falt, it will unite with the aqua fortis, and caufe it to feparate from the filver, which will fall flowly in the form of a white cloud; and if the proportion of the falt be large, the cloud will have a curdled appearance, and a corulean caft.

> 2. Terrene Impregnation.

A few drops of oil of tartar will difcover a fuperabundance of earthy: matter, by caufing it to precipitate to the bottom of the glafs, in a whitioh cloud or fediment.

> 3. Calcarious and Stalactic Matter.

Syrup of violets detects alcaline as well as acid particles; communicating to the water a greenifh tinge, if an alcali, and red, if an acid predominates.
4. Vitriolic, Chalybeate, or Tron.

The milder acids, as vinegar and lemon-juice, poured into a chalybeate water, give it a fweetifh tafte. But the principal teft of the iron impregnation, is the black colour it Arikes with a vegetable aftringent, as tincture of galls; and the purple caft when an alcaline falt, or lime water is added to the aftringent; and which is of deeper hue in proportion to the larger mixture of the alcali. The galls of which the tincture is made, for purfuing this experiment, fhould be blue, of the ftrongeft kind, frefh and found.
5. SULPHUR
is diftinguifhed by the tafte, and inflammability of the fediment \(\%\) and by the waters ftriking a black colour, with a few drops of folution

\section*{J A M A I C A.}
folution of faccharum faturni in water; or folution of lead in the nitrous acid; by its fudden tarnifhing of filver; and by the fetid fmell refembling a rotten egg, or fcowerings of a foul gunbarrel, on dropping in folution of alcalis.

\section*{6. Copper.}

This is difcovered by fpirit of fal ammoniac, made with quicklime; which, if the fmalleft particles of copper are prefent in the water, caufe it to aflume a very beautiful blue colour. Iron precipitates this metal. A plate of iron laid in water, impregnated with copper, will foon be covered with an incruftation of it.

> 7. LEAD
is not a native impreguation of mineral waters; it is generally found in the earth united with fulphur in form of an ore. Waters, impregnated with its ruft or mineral vapour, ftrike a pink or red colour with aqua fortis, and are highly poifonous; for which reafon, on liquor fhould ever be kept in leaded cifterns or other veffels, either for drink or preparing food. That lead, when diffolved by fire, or corroded by an acid, emits poifonous effluvia, is fufficiently fhewn by the difeafes incident to plumbers and painters. But much lefs heat than is required for melting lead, is capable of detaching fuch pernicious efluvia. The heat in the bowels of the earth in this climate may be juftly furpected, efpecially in Liquanea, and other parts where lead ore has been found to work this effect; fo far at leaft as to impregnate any fprings of water, which circulate among this ore. Water alone, if not perfectly pure, is a fufficient agent to caufe a folution of the metallic poifon; and has been found by experience to imbibe it largely. The noted colic of Amfterdam, which for a long time eluded the fearch of phyficians with refpect to its caufe, took its rife from this poifonous impregnation of the rain water, which was collected in leaden refervoirs, after firft lodging on flat leaded houfe roofs, upon which the leaves of trees had fallen in great abundance about autumn. Thefe excited a fermentation, which corroded the lead, and contaminated the water. Tronchin relates that whole families were feized with this dreadful colic: eleven perfons fell ill with it at once in one houfe; who, upon new covering the roof with other materials, and changing their water, recovered. Dr. Baker fufpects, that the lead ufed about the
works in our plantations, where fugar and rum are made, is a principal caufe of the Weft-India colic, or belly-ache But in this conjecture he feems to be greatly miftaken; for, if this was true, the effects would always be certain and invariable; and thofe only would be fubject to that malady, who fwallowed rum and fugar in the largeft quantities, which does not agree with oblervation or experience; fince many are fubject to it, who never drink any rum, and eat but very little fugar. The drinkers of new rum are the moft fubject to it, the reafon of which I have endeavoured to explain. Befides, the caufe is not proportioned to the fuppofed effect. It is true the mill-bed is covered with lead; but the metal fuffers no abrafion, as in a Devonfhire cyder-mill, to which the Doctor's idea perhaps compared it. The cane liquor does not reft upon it long enough, or with preffure enough, to act upon the metal; it falls in fmall quantities, and keeps on its progrefs, in a gentle fmooth current to the gutter, which is commonly made of folid wood hollowed; and where one gutter joins another, the joint is fometimes covered for the face of two or three inches with a piece of lead, though more generally with clay. Two or three fuch gutters at moft are commonly long enough to reach the receiver in the boiling houfe, which is made entirely of wood; and there the liquor remains to fettle, till it is wanted for the copper. If any ill effect can be fuppofed to arife from this metal in the procefs, it can only happen from what is laid round the rim of the coppers, where it undergoes a conftant great heat; and might poffibly communicate its effluvia to the liquor, whenever it is fuffered to boil fo high as to come in conta\&t with it. This the boilers in fome meafure prevent, by beating it conftantly down with their fkimmers; however it might be advifeable, hever to lay the lead low in the coppers. In the diftilling houfe, this metal is never ufed in any fhape; and, therefore, the rum cannot be fufpected to be impregnated with any of its effuvia, except what may come in the fkimmings, which are but a fmall part of the liquor ufed in diftilling rum. Whether the fkimmings have any fuch impreguation, is a fact very queftionable, and not very probable; but againt a partial degree of impregnation, the oleaginous and laxative principles of fugar appear to be a fufficient prefervative; and hence it is found, that they who

\section*{576 \\ J A M A I C A.}
eat pan fusar, which is the hard cruif formed about the mouth of the tache, and which cannot well be taken off without fcraping at the fame time into the very fubftance of the lead, do not fuffer any of thore fpatimodic fymptoms in their howels after eating it, which the ruft or effuria of this metal are apt to caufe, when combined with things which are not qualified to correct their natural effects. Dr. Cremer obferved, that the potters at Ofterhout near Breda, though conftantly employed in glazing earthen veffels, were rarely affected with any diforder in their bowels; which exemption he attributes to the large quantities of butter and fat bacon, which are their ordinary food; fo experience has taught the labourers in lead mines, to fortify their fomach, and inteftines, with fat broths, and fuch like unctuous aliments, which are antidotes to this poifon.

The vapour arifing from the fmelted ore at the mines in Mendip Hills, in Somerfethire, is fo poifonous, that if it fweeps the ground adjacent, it affects the grafs in fuch a manner, as to deftroy cattle or fheep that browze on it. There is a flight, or light fubflance, which floats in the fimoak; and this, if it chances to mix with the water in which the ore is wafhed, and carried away with the ftream, is faid to have deftroyed cattle, that have drunk of it after a current of three miles.
The diforders to which the workmen are fubject, are pains in the fromach, violent contorfions of the bowels, obftinate coftivenefs, afihmas, and fhortnefs of breath, vertigos, paralytic affections, lofs of appetite, ficknefs, and frequent vomitings.

The foil about thefe mines is red and ftoney; and the flones wathed by the brooks and fprings, are of a reddifh caft and very ponderous: I cannot precifely anfiver, whether the foil about the Liquanea lead mines has a conformity in this refpect. It feems, from the foregoing account, that a ftrong degree of heat is required to difengage this pernicious fume ; the fubterraneous heat is fufficient for fuch an effect in fome places, where there are frata of particles qualified to produce it by their fermentative action. No doubt too, but fones containing this mineral, if lying upon and very near the furface expofed to a Tropical fun, may caufe this poifonous vapour to be emitted or perfired in fome degree; and, mixing with the air, may render it unwholefome; but we bave no certain proof, that

\section*{BOOK III. CHAP. VI.} any fuch effect happens about the lead mines of Liguanea. This merits a further inveftigation; and likewife the fprings, or ftreams, which pafs among them, ought to be carefully examined. It appeared, from Mr. Mufchenbrock's experiment, that lead is the fooneft rarefied of all metals; its expanfion with the fingle flame of a lamp being (compared with iron) as one hundred and fifty-five to eighty: which is nearly double; fo that its parts are evidently liable to be affected by a very fimall portion of heat. And we find, that milled lead, when expofed to the action of the fun in Jamaica, by being improperly made ufe of, inftead of theet-lead, for covering gutters and valleys on the roofs of buildings, very foon blifters, cracks, and becomes leaky.

\section*{8. Allum.}

Waters which contain it difcover themfelves, on evaporation, by their auftere, aftringent tafte. They change vegetable blues (as fyrup of violets frefh-made) to a red colour; but, if the fyrup is old, to a green. An addition of lime-water deepens the green. They alfo coagulate milk. Bricks harden the fofteft water, and give it an alluminous impregnation. The practice therefore of lining wells with brick is fuppofed improper.

But, on the other hand, about a quarter of an ounce of allum, powdered, and thrown to every fix or feven gallons of turbid, muddy water, will, in about an hour or two, render it perfectly pure and tranfparent. Nor does any inconvenience refult from the allum. It is not only an excellent purifier of fuch water, but is thought, in hot climates, to cool the body, and brace up its relaxed fibres.

There are other methods likewife recommended for purifying water. In Jamaica, the people of Spanifh Town keep their riverwater in feveral large jars, where it fettles and depofites a fediment in about twenty-four or thirty-four hours. Some families have three, or more; which, being taken in turn, well cleanfed, and replenifhed regularly, fupply them with a very pure and light water inferior to none.

Very foul water may be purified by letting it percolate through fand fowed in half-puncheons, or tubs made on purpofe; with fmall holes two or three inches above their lower end, guarded with a piece of hair-cloth, doubled on the infide, to prevent any

Vol. II.
4 E
of the fand from dripping out with the water, which may be collected in a receiver placed underneath. The fand ufed for this purpofe fhould be fhifted now and then, perfecily clear from dirt, and free from all mixture of fearfand. Several of thefe fandftrainers might be provided where a large fupply is required. And thus any perfon may have no bad fubflitute, where a natural fpring is not to be met with. Brackifh water might be very much depurated, if not wholly corrected, by this method : but, fhould this. fail, a very pure element may be obtained with a common fill, even from fea water; and, for this procefs, Dr. Hales advifes powdered chalk, in the proportion of half an ounce to a galion of water, to be from time to time put in at a hole in the upper part of the fill, below the head, to prevent the rifing of the fpirit of the bittern, which would caufe a difagreeable tante; this hole to be immediately clofed, to prevent any abatement of the quantity diftilled. The fame ingenious gentleman invented the tin air-box, full of holes; by blowing through which, with a pair of commonr bellows, the moft ftinking water may be fweetened; the frefh ftreams of air thus thrown in, and difperfed throughout the ventilated water, caufing the putrid vapour to afcend, and efcape from it: and, by this method, a whole butt of ftinking water has been corrected in the fpace of an hour. Nothing is more likely to difpofe the body for the reception of diforders, than water filled with putrid particles. It is worth the experiment, whether even lagoon water may not be rendered potable, after being firft well ftrained, by tranfmitting fhowers of frefh air through it. The failors, belonging to the merchant-fhips which load at this ifland, will very frequently, out of meer lazinefs or ignorance, fill their cafks with brackifh water, taken up at the mouth of a river, or even with lagoon water; rather than be at the pains to procure what is fweet and wholefome. There is farcely a harbour in the iffand, indeed I do not know of above one, where a fupply may not be had of good water. This carelefs practice, and the want of cleanfing their calks before they are filled, may probably have often bred fluxes and other diforders among the crews of thefe fhips.

The lagoon water, being the conftant feminary for mufkeetos, is loaded with the eggs and dead bodies of thefe infeits. It fwarms, befides,
befides, with numbers of other animaicula; and is further corrupted with ftinking aquatic plants and filthy ooze \([r]\). It is difficult to exclude mufkeetos from water referved for ufe, without keeping the mouth of the jar covered with a piece of ofnabrig, or other cloth, which may hinder them from penetrating, at the fame time not wholly excluding the admiffion of frefh air. They depofite their eggs in river-water, and in cifterns. I have even known them hatch in lime-water: but, when the eggs are hatched, the young ones are very confpicuous to the eye, and appear like little tad-poles. Whenever the water is fufpected to contain them, it is carefully ftrained, for drinking, through a clean linen cloth three or four times doubled. The Spaniards generally made ufe of percolating ftones; and, indeed, many perfons now ufe them in Jamaica. They tranfmit an exceeding pure, and very cool water; but the procefs is rather tedious, where a large quantity is every day wanted. Moft people here put out of doors, in a fhaded place (the more open to the wind, the better), feveral fmall unglazed jars, with water; which is always cooleft in thofe whofe texture is fo loofe as to admit part of, the water to penetrate through, and appear in a conftant moifture on their outfide ; the evaporation, no doubt, contributing greatly to the coolnefs of the fluid within, by carrying off the heated, rarefied particles inceffantly.

Cool water may juftly be regarded in this climate as medicinal, and neceffary either to preferve health or reftore it. Many perions, afflicted with putrid fevers, have even recovered by no other remedy; and, in thefe diforders, it is remarkable with what eagernefs and pleafure the patient will drink cold water in preference to fubacid liquors, or any other. The natives drink it almoft univerfally. Sir Hans Sloane mentions it as the cuftom, when he was here, to take a glafs of it every morning at getting out of bed; and he judges it extremely conducive to health, as it not only may cool the inflamed blood, creating a rheumatifm (very often taken for, and almoft always joined with, the belly-ach), but it may alfo clear the bowels of fome four or tharp matter, which may happen to lodge in their cells. He therefore efteems good water to

\footnotetext{

\]

\section*{J A M A I C A.}
be the moft wholefome drink of any; obferving, very juftly, that fpirits, wine, beer, ale, cyder, and all other vinous and fermented liquors, inflame the blood, and load the ftomach with phlegm, caufing hiccoughs with their fharpnefs, and difordering the head. It muft be underftood, however, that, when water is ufed as the only beverage in a hot climate, it ought to be as pure as poffible; and that acefcent fubftances, fuch as vegetables, fhould make a conftant part of the water-drinker's food, in order to avoid that putrefcency of the bodily humours which a total water and flefh diet, without the correction of vinous acids, or the antifeptic air of vegetables, would probably generate. We find, accordingly, that although the natives in this climate feldom drink any other liquor, except cool, pure water; yet they make their principal daily meal confift chiefly of vegetables in their pepper-pots; eat plantains, yams, and cocos, inftead of bread; and are fond of fallads, fruits, and fugared preparations.

The great axiom of health among the natives of the Weft-Indies (as Rouppe well obferves) is, "to keep the body open, to drink "، water, and not to indulge in exceffive venery." But I muft remark, that, of thefe three cautions, the laft is the leaft attended to.

\section*{S E. C T. VII.}

HAVING now confidered the beft means of preferving health in this climate under the feveral general heads propofed, it may be neceffary, perhaps, that I fhould make fome apology for having trefpaffed thus far upon the province of phyficians. Some, who obferve that I have founded the rules prefcribed on the opinions of many among the ableft of the faculty, will acknowledge the weight of authority from whence they come recommended. Others will, at leaft, have the candour to allow, that any inaccuracy, or error, betrayed in the afforting of them, may be pardoned, for the fake of their utility, and the object in view, which is no other than that of promoting the health and happinefs of this colony. For the reft, I fhall gratefully be one of the foremoft in offering my thanks. and applaufes to any gentleman of the faculty refident here, who dlall bend his thoughts to this important fubject, and give the public a more elaborate and ufeful detail of the means whereby the

\section*{BOOK III. CHAP. VI.}
diforders, incident to the climate, may beft be prevented, or remedied. For what can be a more praife-worthy tatk, than the God-like difpenfation of health to the fick, life to the dying, relief to the miferable? It is not a little extraordinary, that, among all the gentlemen eminent and learned in the medical profeffion, who have practifed in this ifland, not one of them fhould have publifhed his fentiments on its difeafes, and the remedies found moft efficacious in the cure of them, at leaft not within thefe fixty or feventy years paft. The only treatife, I ever faw, was compofed by Dr. Trapham, who refided here long ago. Dr. Patrick Brown, who printed a natural hiftory of the ifland in the year 1756, gave his fubfrribers affurance of a fecond volume, which was to contain differtations upon climates, atmofpheres, and difeafes, the yellow and remittent fevers, and worm-diforders; with a particular application of thefe fubjects to Jamaica: but this gentleman has not hitherto thought proper to comply with his engagement. Is it becaufe feveral celebrated phyficians, as Hillary, Biffet, Lind, and others, have publifhed their opinions already, that our Jamaica profeflors of the healing art have, through modefty, been filent? If it be a modeft reluctance, we may defervedly call it a puddor malus, a blameable diffidence, which brings fome reproach on their underftanding, if not on their humanity; for, Scire twum nibit eft, nifite feire boo foiat alter.
And although thefe learned precurfors mentioned may have handled the fubject with much fkill and accuracy; yet it cannot be denied but much ftill remains to be faid: for the fcience of phyfic, like other human fludies, is far too complex in its nature, and admits too comprehenfive a variety of obfervation and experience, to derive more than a partial, progreffive improvement from the practice of many phyficians, even applying their thoughts to it inceffantly during their lives. After a feries of ages, it is perceived ftill very fhort of perfection; but it may be gradually brought nearer and nearer to that fate, by the concurrent obfervation, practice, and experiment, of a multitude of intelligent men, rather than of two or three. Befides, although the genera of the difeafes, moft mortal in the Weft-Indies, may perhaps be well defined and diftinguifood; yet, in the extenfive range of atmorpheres, and countrics comprehendect
hended within that part of the globe, there muft neceffarily happen a diverfity in the fpecies, a deviation of fymptoms, and a confequential obligation to treat them differently, according to the various feafons and fituations.

Thus, for example, the putrid fevers of the Weft-Indies may appear with different fymptoms at Jamaica, than have been obferved at Barbadoes, at Tobago, at Surinam, at Porto Bello, or the Havannah. It may be requifite, according to the feafon of the year, to vary the precautions in avoiding, as well as the precepts for removing, them. In the Northernmoft parts of the Torrid Zone, thefe and other difeafes may differ from, and call for a mode of treatment materially altered from what might be abfolutely proper in, fituations under or very near to the Equator. That fuch a publication is much wanted is, in no refpect, more confpicuous than in the ill fuccefs (too often the child of ignorance) which, to the defruction of many inhabitants every year, has accompanied the pratice of fome bomicides in this country.

If every phyfician here, of good education and ability, was to publifh the fruits of his knowledge and practice, his work would fall into many hands, and prevent much of the mifchief likely to happen from thofe, who, wanting fuch a guide, are continually in error. But, inftead of this, we obferve with regret, that, when an experienced gentleman of the faculty has died here, or removed from the ifland, his treafure of experimental knowledge has been buried with him, or paffed away to another country, where, from difference of climate, it becomes ufelefs.

If to refcue one man only from impending death can yield unfpeakable pleafure to a benevolent heart; how infinitely fuperior mult be his fatisfaction, who, whilf he communicates the means by which thoufands, perhaps, of his fellow-creatures may be faved from extremity of torture and diftrefs, reflects a moment, that, by fo doing, he builds a monument that will tranfmit his name with culogy to future generations! that the happy refult of his fkill does not perifh with him! but that, after his body ceafes from exiftence, he may continue ftill the author of health, life, and eafe, to lateft pofterity!

To lay the foundation of unceafing benefit to mankind in this way, is a work of the nobleft ambition that can infpire the human mind. How applauded is the patriotifm and benevolence of thofe princes, who have erected bridges, formed roads, cut navigable canals, made fecure harbours, and executed other plans of great public utility! They are defervedly fyled the fathers and friends of their country. Nor lefs fo the phyfician; who is really a father to thofe who enjoy their life through his means.

Opifer per orbem dicor was thought an epithet the moft honourable of any to be conferred on the fabulous god of phyfic; and not undefervedly; for, if there is a being upon earth to whom divine honours could, without impropriety, be offered, it is a learned, virtuous, and communicative phyfician.

To defcribe the ftate of phyfick in this ifland, would be an invidious tafk. It is happily fupplied with feveral men of great ability. But, as every plantation requires what is called a doctor, it is needlefs to obferve, that there are too many pretenders to the fcience, as in other countries, the practice not being as yet put under any regulation by law. It may be fome amulement to my reader to be prefented with the hiftory of a Jamaica quack; not that he is to regard it as an epitome of all the practitioners. \(24 i\) capit, ille facit. To a few it may be applicable; but, for the credit of human nature, I declare it is not applicable to any confiderable number. Mr. Apozem, the hero of my narrative, was the fon of a houfe-carpenter in London. At the age of twelve, he was put to a grammar-fchool; and, at fifteen, removed from thence, and apprenticed to an apothecary, of mean circumftances, and very little bufinefs; but he was an old acquaintance of the father, and a member of a weekly porter-club, where they had regularly met each other for twenty years, and contracted a frict friend hip. During the firft three years of apprenticefhip, Mr. Apozem had no other employment except to forape and frweep out the fhop every morning, olean bis mafter's fooes, and go on errands; and, when he had juft attained his nineteenth year, his mafter unfortunately dying by one of his own naufeous compofitions, inadvertently fwallowed, he returned to his father's houfe, where he continued perfectly idle for about a twelvemonth; when an opportunity of fered.

\section*{J A M A I C A.}
fered of getting him provided for, that he might no longer lie a burthen on his father's hands, who was extremely poor, and had a numerous family to maintain. This was effected through the good office of another member of the club (which thews the utility of fuch inftitutions) ; who, on being appointed captain to a Guiney trader, readily offered to take Apozem with him, in quality of furgeon. This being chearfully affented to, the young doctor was properly equipped for the occafion, and foon after entered on the voyage. They took in three hundred flaves, and failed from the coaft, bound to the Jamaica market. The firft great exploit, performed by Mr. Apozem, was in diminifhing the number of moutbs
 time they had reached their deftined port, he regiftered no lefs than eighty Blacks, and nine white feamen, on his dead lift. This wonderful difpatch made the captain extremely anxious to look out for fomething on fhore more proportioned to his great abilities; for he wifely apprehended, that a longer continuance on board might probably leave the thip without hands to navigate her. He therefore gained the intereft of the merchant to whom he was configned. The merchant had a proper regard for the fhip-owners, and foon found means to engage Mr. Apozem in the fervice of an honeft planter who dealt with him; and who, conceiving the higheft opinion of Mr. Apozem's fkill and knowledge, from the many encomiums that were lavifhly given both by the captain and merchant, ftipulated fo handfome a falary, that Apozem quitted the fea without the fmalleft hefitation.

Mr. Apozem, foon after his entering upon this new feene of bufinefs, difdained to confine his carnage merely to the family with whom he refided. The firft ftep he took, after looking about him a little, was to extend his practice, as much as he could, among other families and plantations; fome of which were not lefs than thirty miles diftant from his employer's habitation: fo that, in about fix or eight months, he was continually upon the high-trot, riding poft, and fpreading depopulation far and wide. His principal inftruments of death were mercury and opium, ever miftakenly applied, and injudicioufly combined. Liquid laudanum was his ready help in time of need, and ftood his ignorance in great fead.

\section*{BOOK III. CHAP. VI.}

Whenever at a lofs to find out the caufe, or nature, of a diftemper (which generally was the cafe), a dofe of laudanum was the firft piece of artillery he brought into the field, to begin the attack. If the fymptoms ftill left him doubtful, repetatur dofus! laudanum again, either per fe, or jumbled with a new mixture, to raife the credit of his fkill, and prevent detection. Thus the fiege went brifkly on, with laudanum, to the end of the campaign, until the patient's life, or conflitution at leaft, was fairly fapped, and compelled to furrender at difcretion. As opium was his grand fpecific for all hyfterical and nervous ailments, as well as others where the fymptoms puzzled the doctor's imagination; fo mercury was lugged in by the head and fhoulders, to fave his credit, in all cafes of cuticular eruptions, belly-achs, and topical inflammations. If mercury failed, after a bill of one or two hundred piftoles, "The de" vil's in this obftinate difeafe !" cried Apozem; "it is not, fure, " in the power of phyfic to conquer it! There's no remedy left, "Sir, but to flce to Bath, or change the climate!" This was the laft refource of his art; for he reafoned thus: "I fhould be a con" fummate blockhead, indeed, to put the finifhing ftroke to this " bufinefs, and fo blow myfelf up at once. No! let my patient "perifh at Bath, or on the road thither ! or fail for Britain, and die " in his hammock! If death fhould lay hold of him, after he is " difcharged out of my hands, thou canjf not Say I did it!" Thus argued Mr. Apozem; and thus did he extricate himfelf from many a troublefome fcrape. It was a great misfortune to the public, that his father had not kept him long enough at fchool to acquire a fmattering of Latin: it was, indeed, no lefs inconvenient to himfelf, and multiplied his difficulties on many occafions. But true genius leaps over every ftumbling-block; and, what he could not conftrue with the help of Cole's dictionary, he always gueffed at as well as he was able. No man, furely, could have done more. It is needlefs to fay, that he never boafted his fikill in decyphering a common formula, or Latin prefcription. He condemned the folly of writing receipts for health in an unknown tongue; and one might as well have fent him an infcription taken from one of the ruins at Palmyra. After puzzling his brain for half an hour in vain, to difcover the meaning, he ufually mixed up fome horrid

Vol. II.

\section*{J A MA I C A.}
hotchpot of his own invention, in order to comply with vulgar prejudice, and leave no room to furpect that he had not compleated a grammatical and claffical education. It was enough for him, if he could but luckily explain the laft words of a prefription, to diftinguifh a fait bolus from a fath hauffus. Under the aufpices of thefe qualifications, the following efcape of a patient may be confidered as almort miraculous. A certain gentleman was troubled with an eruption on his fkin; and, having a fmattering of medical knowledge, he took upon him to be his own phyfician, wrote a Latin prefription for a liniment, in which fulph. vivum was the principal ingredient; and difpatched it to be made up by Mr. Apozem. Our hero pored over it for fome time with great attention; and, concluding at length that fulph. vivum and argent. vivun were coufin-germans, compounded a mercurial ointment; with which the patient unthinkingly befmeared himfelf from head to foot: but, in a fhort time, he became convinced of his error; the eruption ftruck in; he gave himfelf up for a dead man; and, indeed, did not come off without a violent fit of illnefs, which had nearly coft him his life. I eannot, without horror, reflect on the multitudes who have quietly defcended into their grave, leaving the frauds impofed upon them undetected. It was always a maxim with Mr. Apozem, " that the dead tell no tales," - "My reputation," (thought he) " is fafe, under the authority of a diftemper which " is often known to be mortal. But, if that won't ferve my turn, "I'll fay the patient was fulky, and determined not to live; or "that he was faint-bearted; or had a bad habit of body; or had " lived too free in his youth; or wanted a fiamen; or that fome"thing broke within him; or-any other reafon why." Under fuch prudent falvos did Mr. Apozem, " not having the fear of " God before his eyes, but moved and feduced by the inftigation of "the Devil," go on to ravage and deftroy the human fpecies, with as little remorfe and fhame as Alexander the Great, or the greateft flaughterers of antiquity. His utmoft dread was the decline of fuch bloody bufinefs; his principal wifh, the quick fale and confumption of his drugs, which were rotten or fophifticated: though, bad as they were, he generally made a profit of one thoufand per cent. upon them in the retail way. The fale of thefe poifons

\section*{BOOK III. CHAP. VI.}
formed the moft gainful part of his bufinefs; though he was, occafionally, a phyfician, apothecary, furgeon, man-midwife, dentif, phlebotomift, farrier, \&cc. He profeffed every branch, knew as much of one as of another, underftood none: and, thus aecoutred, he was ready at all calls, and engaged in the cure of diftempers, whofe names he had never heard before. He had a happy manner of difcuffing the rationale of any difeafe, of which I fhall give a fpecimen that does him honour. He was fitting one day by the bed-fide of his patient, whom the hero had over-dofed with a purgative, which caufed fifteen evacuations in a few hours; and, the irritation ftill continuing, the very mucus of his bowels came away. The patient, alarmed at this appearance, languid and almoft fpent, having taken no fuftenance all the day, for want of fome refpite from his agony, requefted the doctor to inform him of the caufe of the laft mucilaginous difcharge. "Oh," quoth Apozem, with an air of moft folemn fagacity, "it is nothing more than the fuper"fluous juices of the blood, Sir, which are following the operation " of the bolus, Sir; 'tis a fure diagnoftic that the medicine has "s worked critically, and that the morbid acrimony of the prime "vix is depurated from the abdominal emunctories." Mr. Apozem continued in this ftrain till he had talked his patient faft afleep by dint of hard words; in which comfortable ftate he foftly left him, to recruit his wafted fpirits.

Mr. Apozem was a profeffed enemy to regular phyficians, becaufe none, who valued their good name and reputation, would be concerned with him; for they never could have the fatisfactory affurance, that a fingle ingredient of their preferiptions would ever enter into Mr. Apozem's manufactures. It was impoffible they could meet with fuccefs; for, when they prefcribed one thing, Apozem was fure to compound and adminifter fomething very different: fo that, in defpight of all their learning and affiduity, the patient was morally fure of dying. When the manner of the death came to be the fubject of converfation, Apozem laid it, with a thrug of his thoulders, at the phyfician's door: "the poor man "died regularly!" After a few fuch examples, the preferiber loft his bufinefs; and Apozem was fent for in his ftead. I have often thought, that, confidering the defolation which Apozem fpread

\section*{J A M A I C A.}
through the country, and the many hundred victims which he facrificed every year, there arifes a very frong evidence of the falubrity of the climate, which of itfelf is pregnant with but few endemial difeafes; and thefe are pretty well underftood by phyficians of any tolerable education and experience; fo that, had it not been for the activity of Mr . Apozem, the proportion of fuch as might have owed their exit fairly and truly to the climate, during the time he flourifhed here, would have been too infignificant to caufe the fmalleft furprize.

Mrs. Apozem (for our hero thought meet to take unto him a wife, in hopes of making fome reparation to fociety for the thoufands he had fent out of the world) was a religious, good fort of a woman, and would very often give him wholefome admonition. "I would ad"s vife yout, my dear Mr. Apozem, faid The, to turn from your evil
"ways, and honeflly confefs your ignorance, by refufing to prefcribe
" for diforders, to which you know you are as much a ftranger as
*s myfelf. Surely this would be more humane in you, than to go on
"s at this rate, wilfully and confcioufly adminiftering your flops to the
"deftrution of your fellow creatures. Ignorance is never criminal,
"6 except when it does mifchief; and then, if it is unchecked, God only
"s knows where it will ftop. It is true, you think to fupprefs your
"t qualms of confcience by alledging, that you do not difpenfe your
" ftuff with a downright direct intention to wound or kill; but, if the " effect is generally hurtful, what does your intention fignify in the " fight of God? If you was to ftand in the middle of a crowd with a " loaded gwn in your hand, and difcharge it with your eyes fhut, " would this acquit you of the damage that enfued; you might fay,
"I took no aim, I pofitively did not fire at any particular perfon, and
ss therefore did not intend to kill the poor man who happened to be
" ftruck with the ball: but, I am afraid, this excufe would not fatisfy
" a jury, they would moft undoubtedly call it murder, and, after all
" the logic of your diftinction, you certainly, my dear, would be
" hanged, which heaven forbid! for in hort, although you did not " pofitively intend to kill Dick or Tom, yet you confcioufly did an " act, which, your own mind muft have fuggefted, was not perfectly " innocent, confidering the fatal effect it would in all human probabi" lity occafion." Mr. Apozem ufed to hear thefe harangues pretty frequently, and fometimes he would even promife amendment; but fo

\section*{BOOK III. CHAP. VI.}
flinty was his breaft become by inveterate habit, that the dying groans of a patient never coft him a fingle pang; and he grew more hardened in proportion as he fuffered no lofs, either in bufinefs or character, from fuch misfortunes; fo fertile was his invention, in thifting the blame from his own hands. Thus, like a fkilful archer, he dealt his arrows from behind a bufh, whilf,
"Sævit atrox Volfcens, nec teli confpicit ufquam \({ }^{\text {" }}\)
"Auctorem."
"Volficens form'd, nor found
"The daring author of the diftant wound."
He never voted the calling in a phyfician, till his patient lay at the very laft gafp, drenched with his deadly potions beyond the falvation of medicine; and hence always drew the advantage of proclaiming, " that death and the phyfician generally came into a fick room toge"ther." His rule for vifiting, is not the leaft curious part of his ceconomy : whenever he was fent for, his maxim was, to meafure the delay of fetting out, and the length of the vifit, " according to the " ffrength and length of the patient's purfe." If he faw reafon to expect a handfome gratuity, or a long bill, he ufed to feud upon the wings of the wind, and was at the patient's wrift in a trice. He held, that " putting any interrogatories to fick perfons, was only perplexing " their minds, already too much difcompofed with illnefs; and im" peached the dignity of thofe who are born doctors, and fo compre" hend every branch of the art, by natural intuition." Any enquiry therefore, into the paft habits of living, diet, exercife, irregularities, and the general flate of health and conffitution, "were utterly fuper"fluous to a man of true penetration." Apozen was fatisfied to fay no more, than "I'll fend you fomething directly;" and he never was known to break his promife; phials, boxes, and gallipo is, followed by dozens, whilft, repofing in his elbow chair, he fat down to enter \(f_{0}\). s. \(d\). His vifits were repeated three or four times de die in diem, more or lefs, according to the patient's rank and fortune. If his applications were unable to interrupt the laborious efforts of nature, and the difeafe began to lofe ground, it was very well; there was, however, no want of regular fupplies, of pectorals, emenagogues, febrifuges, and vermifuges; paregories, and fudorifics; laxatives, and alteratives; fomentations, and embrocations; draftics, and epifpaftics, to be fwallowed, or
applied, every fifteen minutes, night and day; none of which, we may be fure, were unnoticed in Mr. Apozem's maniffript, commonly called a Journal.
To conclude my narrative ; fince the beft precautions cannot at all times guard the moit temperate and careful; fince all flefh is fubject to pay the debt of nature, and even doctors themfelves are not exempted from the common lot of mortality; fo it full out, that Mr. Apozem was taken, by furprize, with a malignant diffemper, which laid hold of him with fo much violence, that he was very near calling out for help of the ficulty, if he had not been reftrained by a riveted opinion, that fuch auxiliaries were like the Saxons and Normans, who (upon invitation) firft drove out the inteffine enemy, and then fell upon the inteftines themfelves: configning himfelf therefore to defpair, he foon fell a victim to his own drugs, which had inflicted the fame fate on many a worthier man. Such were the life and opinions of Mr. Apozem, who might boaft of having fent more fouls to the banks of Styx in one year, than the yellow fever ever did in ten,
The fcience of phyfic, when taken out of the hands of fuch poifonmongers, is truly noble. We find the Saviour of mankind employed himfelf in this godilike office; hís miracles were medicinal, he "went " about doing good," and his divine power was exerted in healing the fick, reftoring fight to the blind, and vigour to the infirm. It certainly merits the greateft encouragement in all inhabited countries, but more eipecially in colonies and new fettlements, where unufual difeafes are obferved. This exalted art, if duly cultivated, is capable of producing very important effects in fuch places. If nothing more was to be expected from it, than the augmentation of commerce, this alone is a fufficient motive for a trading people to give it the moft honourable diftinctions among them ; fince commerce ftands fo largely indebted to phyfic, and its fifter botany, not only for materials of import and export, but the abilities of men employed in collecting thofe materials.
Nor muft we pafs over the happy confequence accruing to a new fettlement, from having its endemial difeafes thoroughly underftood, and the lives of the fettlers preferved or prolonged, by medical fkill and fagacity
The number of hands in fuch a place is generally fo inconfiderable, that a fudden mortality, and the lofs of a very few inhabitants, may nip
the moft hopeful projeet in the bud, and deter other adventurers from going to refide in it; for, if once the character of any remote fettlement is eftablifhed for unhealthinefs, it is always found a very difficult tafk, and a work of long time, to difpel the popular prejudice, and convince mankind that fuch a place is habitable. Befides, it may happen, that the perfons firft carried off by the attacks of ficknefs in fuch a country, for want of proper medical affiftance, have been the chief promoters or undertakers of the fettlement; they may be men of the moft capacity and ability among the inhabitants; and, in fuch cafe, the lofs is irreparable.

But, in a colony already formed and provided with a legiflative power, it is the higheft reproach, it is even an impiety, that a tribe of Apozems fhould be tamely permitted to over-run and depopulate it, preying on the purfes and lives of innocent men, with an impudence, ignorance, and rapacity, that is unparalleled. If the woods were peftered with tigers or rattle-fnakes, like the forefts on the American continent, with what terrors fhould we not reflect on the deftruction they might caufe! with what zeal and folicitude would not the legiflature promote rewards and encouracements to extirpate them! Yet, in fome colonies, they have been known to fuffer with impunity a much more lethiferous race of favage animals in human fhape, who have fiffed the emotions of humanity and confcience, whilft they poifoned, and tortured to death, the bodies of their very friends and benefaqors.

The dignity of the fcience of healing (not of murtbering) ought furely to be placed on the firmeft bafis in fuch a country; that, whilft the inhabitants confide their very exiftence to the phyfician's care, he may be enabled, by proper regulations, to affure himflef, that his patients will not be forced to fivallow any other mixture than what he has prefcribed; and that the varying, or adulterating, his prefcription, will be punifhed by the laws, in the fevereft and moft exemplary manner; and furely, if we confider a moment, that fuch deceit is no lefs than a clandeftine attempt againf the life of one party, and the reputation of another, it muft appear an offence of the moft capital nature, and worthy of capital punifhment.
As a foundation for this, we may recommend the plan, which that good man colonel Codrington found means to carry into execution, from the opulence of his fortune, and liberality of bis fentiments. He,
no doubt, had long deplored the calamitous circumftances of Barbadoes, unprovided with a fufficient ftock of practitioners, regularly trained to the knowledge of phyfic. He was fenfible, that a colony, furrounded with enemies, and liable to internal infurrections of flaves, required a conflant fupply of white inhabitants; and that, if the proportion of thofe ammally imported did not counterbalance the number annually fwept off by diftempers, the colony muft ineritably decline; for, it is the multitude of ufeful hands which conffitutes the vigour and profperity of every fettlement ; and the greater the mortality is, the greater, and heavier, mult be the labour that falls upon the furvivors: if 500 men only are employed to garrifon a country, which, from its extent and circumftances, requires 2000, the infufficient body may harrafs themfelves to death, and yet be unable to maintain their ground againft an enemy; fo if, by judicious practice, only 500 lives per annum are retrieved, which, by erroneous practice, would have infallibly been loft to the community, no man furely will deny the importance of fuch an acquifition to a Weft India colony; the faving thofe lives may introduce, perhaps, an increafe of many hundred more to the ftock by procreation; add to this, that the death of a principal planter, on whofe well-being twenty white perfons are probably dependent for bread and employment, is equal to the lofs of twenty-one perfons; becaufe thefe difcarded fervants, who have attained to no fixed property, may remove to fome other country in fearch of a provifion. Nor does the lofs entirely reft here ; if he was a virtuous man, fuftained a public employment with integrity, and diffufed happinefs and utility from the greatnefs of his ftation, his ability, and benevolent fpirit, fuch a chafin becomes fill more extenfive, and difficult to be repaired. Colonel Codrington, who enjoyed the government of Barbadoes, devifed by his will in 1710, two plantations in that ifland, and likewife a part of Barbuda, another of the Carribbee iflands, in value about \(2000 \%\) per annum, or upwards, to the fociety de propaganda fide, for the purpofes of inftructing Negroes belonging to Barbadoes, and the other Carribbees, in the Chriftian religion, and for erecting and endowing a college in Barbadoes, in which the liberal arts thould be taught, particularly phy/ic and furgery. A college was accordingly erected there, the good effects of which may be traced, not only in the greater number of white inhabitants in proportion to the other Britifh iflands,

\section*{BOOK III. CIIAP. VI.}
illands, but in the fuperior flaill of the phyficians refiding in it ; for, 593 bas been in no fmall degree otwing to the practitioners of Barbadoes [s], that we bave any tolerably fcientific account of dipafes incident to the Weit Indies, their treatment, and method of cure. We muft not expect, perhaps, to fee a tolerable performance on ths fubject, compofed by a Jamaica phyfician, until the legillature, in ommiferation of the fufferings, and lofs of inhabitants, fhall take vigorous and effectual meafures, for excluding all thofe from commencin! phyficians, who do not bring with them authentic and fufficient crdentials, certifying their qualification for fo arduous a bufinefs.

It is true, a diploma from Glafgow does not lways confer fenfe, neither fhould the want of that venal bonour depure any man of the efteem and deference due to real merit. If a fuyeon or apothecary has got the education and knowledge required \(i\) a phyfician, he is a phyfician to all intents and purpofes, and ought tibe refpected accordingly \([t]\); but fome line fhould be drawn, in ordero refcue the practice out of the hands of low and illiterate perfons, wh are a fcandal to the profeffion. The difeafes of the human body at fo intimately combined, thet it is impoffible to underfand fome ofhem perfectly, and be entirely ignorant of the reft; and equally imoffible to underftand any of them without a proper knowledge of anomy, and the animal ceconomy, both in its found and morbid fate. 'o excel in this profeffion, requires a greater compafs of knowledgthan is neceffary in any other art. A knowledge of the mathematis at leaft of the elementary parts of them, of natural hiftory, and nural philofophy, are effentially comected with it; as well as the fcices of anatomy, botany, and chemiftry, which are deemed its immete branches. There are likewife fome pieces of knowledge, which ough not abfolutely neceffary to the fuccefsful practice of medicine, ayet fuch ornamental acquifitions, as no phyfician, who has had a regir education, is found without; fuch is, an acquaintance with the La; Greek, and French languages ; to which may be added, fome knovdge of the world, of men, and manners \([t]\). All thefe qualificationve look for in a re-gular-bred phyfician; but when the three braes, of the prefcriber or phyfician, the furgeon, and the apothecaryll mix in one man,

> [s] Viz. Towne, Warren, Bruce, Hillary, and others.

VOL. II.

\section*{J A M A I C A.}
which is more generally the cafe in Jamaica, we may difpenfe with many of thefe attairments, fo requifite in an accomplifhed phyfician, provided fuch a pratitioner is well acquainted with the fciences of anatomy, botany, ard chemitry ; for, without a competent knowledge in thefe, be cannot underffand properly the principles of any drug or medicine, nor in wat manner to apply it to a difeafed body. The animal machine willbe, in his hands, like a watch in the hands of an Indian; he will fee i move without knowing the caufe; and when it is difordered, he ma break it to pieces by his unikilful attempts to rectify it. Perhaps, nif fcheme might be apter to eftablifh the practice on a proper footing Jamaica, than the erection of a college, endowed with a library, leturers on phyfiology, pathology, anatomy, bofhops and the materimedica; with licenfed infpectors of apothecaries required fron oath for the honeft tion, before he coul be ifland.

From fuch an inflution might be hoped the beft effects, in refpect to the health of the inabitants, the triumph of ability and learning over impudent empirifm, and a large fund of information to guide future practitioners; he is the nobleft field for botanical enquiries, and the readieft helps to atomical knowledge. In procefs of time, the commerce of the ifla might expect to paricipate the advantages refulting. The fpices the Eaft, the bark tree of Peru, the balfam trees of Mexico, and manyther valuable plants and productions, might be introduced under the ficices of a learned fociety, and propagated in this fertile foil.

Providence has accumodated every region with fpecific remedies for its endemial differrs: but the medicinal virtues of the Jamaica plants are as yet but le known to any of its practitioners. It is attended with lefs trou to find a medicine in the next drawer, or gallipot, than ramblato woods for it, or enter upon a laborious courfe of experiments.And, in truhh, very ferv here underfand any thing of botany, or chiftry. Yet as the American difeafes differ in many refpects from th of Europe, fo they feem to require a different materia medica; anone can be fo appropriated, as the native productions
productions of the country to which thofe difeafes are endemial. The practice of phyfic then, where neceffarily deviating from the European (refpect being had to the diftinctions occafioned by climate) would become eftablifhed upon more rational, and certain grounds; many lives would annually be faved, and the profeffion, which is now difgraced by illiterate dabblers, would refide in hands, from whofe fikilfulners the inhabitants might expect more fecurity to their life and welfare, whilft the illand, thus relieved from one principll caufe of mortality, would fee its people multiply, its trade and exports enlarge, its ftrength and opulence augment. From the neeffary connexion of caufes with effects, it is reafonable to think, tht all thefe advantages would happen, in confequence of a thorough pugation of abufes from the practice of phyfic in this ifland.

A moderate fhare of induftry, with health, hs laid the foundation of many a great fortune in Jamaica; this places, therefore, jufly an object of attention to thofe, whofe flender patrnony, or indigent cercumftances, render them unable to gain a compent provifion in their native country. It is the afylum of the diftuffed and unfortunate, where all may enjoy fuftenance, and where beggar is unknown. They who arrive now have an advantage, unnown to our anceftors, of coming to an eftablifhed fociety, which, fro the number of towns and fettlements, has every accommodation ad convenience that can be defired. Here is ftill ample room for manyoung beginners, fince much of the beft land has hitherto, by reon of its central fituation, lain neglected and uncultivated. Theaily improvements that are making in the roads will foon (with thoublic aid) render thefe lands of the middle diftricts extremely valule, and convenient for fettlers; the chief difficulty which always ænds new fettlements, in hilly or woody countries, being the want good carriage roads, affording an eafy communication with townsad fea-ports. It is a further inducement, that thefe diffricts are asealchful as any part of Great Britain; which circumftance feemslly evinced by the undiftempered lives of thofe perfons who have akdy refided in them. The purity and mild cool temperature of their a at all times of the year, are propitious to human health, whilft the itfulnefs of the foil is inexhauftible, and affords abundant fupplies food more than anfwerable to the labourbeftowed upon it. Whimay be further conducive

Vol. II.

J A M A I C A.
to population, muft depend on wife laws and fit regulations, calculated for the protection of property, the encouragement of induftry, the abolition of tyranny, the difcountenancing of felfifh monopolies, and the confervation of bealib Thefe demand affiftance, from a legiflature influenced by public fprit, a liberal judgement, and perfect knowledge of their country's beft ittereft. Such a legiflature need not to be informed, that the advantags of a thorough population and fettlement are of fuch vaft importane to this ifland, as to be well worth their purchafe, by every fuitabl provifion and encouragement in their power to frame or beftow. Covinced of this truth, the means are obvious.

\section*{APPENDIX to the SECOND VOLUME.}

7AMAICA is divided. p. I.] My opinion in regard to the Indian origin of the name of this ifland, as hinted in the former volume, p. 353 , is ftrengthened by the account we have from Peter Martyr, in his Decades; who fays, that it was called Jamaica by the Indian inhabitants when the Spaniards firft difcovered it.

Indian natives, who fell victims to the barbarity of their Spanifl conquerors, p. 153.] Peter Martyr mentions, that it was exceedingly populous; and the Indian natives far more lively, acute, and ingenious, than any the Spaniards had met with in the other iflands.

Known by the name of Curtin's Jpring, p. I38.] This water, I am informed, has been examined, with ftill greater accuracy, by Dr. Turner; but I have not been fortunate enough to meet with his ingenious remarks upon it.
P. 207. To the account of Weftmoreland parifh I am enabled to add the following particulars:

Its metropolis was formerly Queen's Town (now Crofs-Path), which contained a church and many inhabitants. But, in the year 1729, Thipping began to refort to the harbour of Savannahla Mar; and, in the following year, the parochial meetings were removed thither, and houfes began to be built. Thefe changes brought on a fpeedy declenfion of the old town. The ftructure of the fort was firft begun in 1733 ; and it was judicioufly fituated for commanding the feveral channels leading into the harbour; but the town, inftead of the low, fwampy foil on which it now ftands, might have been placed, with far greater advantage, about a mile more to the Eaftward, on an elevated, dry fpot, through which a rill of good water conftantly runs. This fcite would likewife have been more commodious for carrying on mercantile bufinefs; not only becaufe there is a greater depth of water near the thore, but that finall veffels may pafs to and fro with any wind. The inhabitants of Savamah la Mar lie under the further inconvenience of being obliged to fetch their water, for domeftic ufes, from a great
\[

\]
diffance

\section*{A P P EN DIX to Vol. II.}
diftance acrofs the bay; except immediately after the rainy feafons, when, by the flooding of fome gullies, they gain a temporary fupply in their neighbourhood. The fum of thirteen hundred pounds has been lately expended on repairs to the fort, which the parifhioners intend to furnifh with cannon.

The town contains near one hundred houfes: Beckford-town confifts of about thirty; and the remainder of the favannah has about as many more. The number of veffels loaded here, at an average of the laft four years, amounts to about eighty per annum (not including coafters, or droguers) ; and their burthen has been computed at eleven thoufand five hundred and eighty-five tons; which calculation allows about one hundred and forty-five tons to each veffel. Hence fome opinion may be formed of the confequence and value of the trade carried on at this port. And, that an eftimate may likewife be inade of the improved ftate of the plantations in this parifh, the following may fuffice.
Anno. Negroes. Hhds. of Sugar. Number of Sugar Eftates. 1770, \({ }^{17237} 7915\)
which the reader may compare with the fate I have before given of it for the year 1768 .

Manning's free-fchool maintains only fix or feven boys. This is attributed to fome inattention in the truftees; for it is afferted, that the fund is improveable, and very capable, if judicioufly managed, of fupporting many more. I know not what truth there may be in this charge; but, if it is fairly adduced againft the truftees, there is evidently fome defeet in the law which was paffed for regulating this foundation.

\section*{Mineral Waters.}

The chalybeate fpring at Ricketts Savannah has been already found of fingular benefit in obftructions, and other diforders accompanying a lax fibre. It appears to contain volatile-vitriolic-acid, felenitic-earth, and a portion of fixible air. This fpring, if it was properly attended to, and guarded from the accefs of rain and other mixtures, might prove highly ferviceable to the inhabitants. There is alfo a hot-fpring lately difcovered in the mountains lying between this parifh and Hanover; in all probability it is fulphureous, and has affinity in its principles and operation to the hot bath of

St. Thomas

\section*{A P PENDIX to Vor. II.}

St. Thomas in the Eaft. As yet it has not undergone any analyfis: But there is every reafon to believe, that it will prove, upon experiment, not to differ much from the Eaftern medicinal ftream; and, in this event, that it will be of the utmof utility to the parifhioners, and indeed deferving of every public and private encouragement in order that its falutary effects may be rendered more acceffible and diffufive.

The other articles proportionably, p. 229.] Dr. Campbell, in his Political Survey of Great-Britain, \&c. vol. II. p. 666, has favoured us with a lift of the exports from this ifland in the year 1770 , with their value. The latter, however, is rated arbitrarily ; which muft always be the cafe in fuch calculations, though probably not varying much from the truth. If the rates thould be judged too high, it will be at the fame time confidered, that the articles of
Indigo,
Tortoiferhell,
Zebra-wood,
Lignum-vite,
Brafiletto,
Fuftie,
Logwood, and fome few others, befides
Bullion, are not enumerated, though a large allowance is due to them. Exported from Jamaica, A. D. 1770. f. Sterling.

V. 2```

[^0]:    [b] In blocks of this ftone, or marble, I have feen very perfect fhells of the Jamaica mufcle and pectina. In fome parts of the country, where it overfpreads the furface, and has fuffered a tonsefation from the accidental firing of the woods in dry weather, it appears pitted all over; and the little cavities, only divided from each other by thayp points, thefe have been occafoned by violent fhowers falling upon the rock when its face was foftenc! hy fire. A gentleman's houfe built of this material, being unfortunately burnt, the walls continued fandang tiii a fer of heavy rain came on; when they farirly diffolved into a fubtrate of lime.

[^1]:    be fitly qualified for fuch profefion. So perfons, who have been wriers to the fignet in Scotland for three years, may, upon producing certificate of fuch fervice, and going through one year's further clerkfhip in Jamaica, and being approved of upon fimilar examination, be admitted in like manner. And, to prevent collufive co-partnemhips, all partnerfhips, contracted between attornies and folicitors, muft be reduced to writing, duly figned, fealed, and executed, in form, and recorden in the fecretary's office; and the names of all the partners indorfed on all writs, and other procefs and proceedings, wherein they may be concerned. And, in order to put a fop to frivolous fuits, it is enacted by another law, that, if the debt and damages to be recovered upon any perfonal ace tion (except for matters affecting titles or intereft of land, flaves, or their freehold or inheritance). appear not to amount to forty fhillings or upwards, no greater colts fhall be allowed to the plaintitl thas the fum of fuch debt or damages; but lefs may be awarded at difcretion of the court.

[^2]:    [d] Since the above was written, the affembly have flewn a due hnomanity to the fufferings of thele unfortunate perfons, by purchafing a piece of land, adjoining to the South part of the gaol, of one hundred and fifty by one hundred and twenty feet, and granting 1000 l . for inclofing and erecting.proper buildings upon it. 'Chey have alio enlarged the debion's allowance from $7 \frac{1}{2} d$, to
    is. 3 d . per day.

[^3]:    [g] Se:Plate IV.

[^4]:    [b] So Virgil calls the river Tyber cerruleus, azure, or fky-coloured. Æn. viii. v. 64.—Some have conjectured, that the original name was Rio Cobra, from the Portuguefe cobra, which fignifies a frake, and might with great propriety allude to the ferpentine courfe of this river.
    [i] An infufion of galls in water, impregnated with copper and quick lime, ftruck an orange colour inclining to reddih.

[^5]:    [ $k$ ] It is true, an act was paffed in $\mathbf{2 7 6 7}$, and truftees named for carrying it into execution. But, as this ait only empowered them to receive $5000 \%$ from any perfons inclined to contribute towards it by voluntary fubfription, it feems to have given no other power than what might have been exercifed without it.

[^6]:    [ $p$ ] In Englifh: "Peter Martir, of Anghiera, an Italian, citizen of Milan, chief miflionary, " and abbot of this iffland, member of the council of the Indies, firft raifed from its foundation, " with brick and fquared ftone, this edifice, which formerly was built of wood f $_{2}$, and twice deftroyed "ty hisu"

[^7]:    [l] For exam, le, "that it is meritorious to kill heretics."

[^8]:    $[$ [ ] See Plate V.

[^9]:    [ $t$ ] The inhabitants about Mendip-hills, in Somerfethire, which contain the famous lead-mines, enjoy good health, except fuch only as are employed in finelting the ore. But, according to fome authors, the American mines are not fo inoffenfive in all parts of the continent : and many judicious perfons fufpect, that the unhealthinefs of Kingfton muft be attributed to thefe mineral fteams, whofe miajizata impregnate the dews, which are carried down by the land-wind, and defcend upon the town at night; and, in contirmation of this opinion, they affert, that the inhabitants more often contract ficknefs from expofure to the night-air here, than from any other caufe whatever.

[^10]:    Catharine Hill, $\}$ above the $\{5050=1$ wanting 230 feet.
    Blue Mountain Summit, $\}$ feals level, $\left\{\quad 7553=I_{2}^{\frac{T}{2}}\right.$ ditto 367 ditto. conrequenty, the mercury in the bar meter (asceably to Dr. Halley's calculations) ought to itand on the Biue Mlouncain at about 22 100 inches,

[^11]:    [. 9 ] The medium quantity received, communibus amis, about 4 I5, equal to 21,500 tons of fhipping. An act has lately been paffed for levying the duty in money at is. 6 d . per ton on all veffels (foreign only excepted), and appropriating the proceeds as a geneval fund for repairing forts and fortifications; a meafure from which, I am perfuaded, the illand will reap very great advantage. By the fame ait, the receiver-general is enpowered to buy powder for fupplying them.

[^12]:    [z] He was commiffary-general for the Affiento; lived here many years; and acquired a confiderable property, with univerfal efteem.

[^13]:    [a] Provifion has lately been made by the aftembly for rebuilding two forts, or batteries, one ou each tide the entratuce.

[^14]:    [b] About ten leagues South-eatt from the Point, or Cape of Morant, lie the two Morant cayes, called by the French $R$ anucs. The North-eat caye is placed in latitude $17^{\circ} 26^{\prime}$ North; and the South-weft in $17^{\circ}=20^{\prime}$. As they are directly in the track of mips coming down to Jamaica from Europe, or the Windward Itlands, great caution is ufed not to fall in with them in the nighttime. Not long fince, a Guiney-man was wrecked hole. But fuch accidents have very rarely happened. Under the South welt caye there is good anchorage from five to sighteen fathom water.
